YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference

work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost \$1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog now.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

A "Thermit Outfit" should be in every Railroad Shop

We do not make this statement directly from our point of view, but from the opinions given to us by the many Railroad Officials who agree that they could not afford to be without our welding process in their shops.

327 Railroad Shops are Now Equipped with "Thermit Outfits"

The application of "Thermit Welding" to iron locomotive frames, connecting rods, driving-wheel spokes and other sections of wrought iron and steel, will result in a great saving of time and expense.

It is seldom necessary to dismantle the engine, and it can usually be returned in twelve working hours after entering the repair shop.

If a "Thermit Outfit" is not in your shop, you should investigate the merits of our welding process at once.

Write for our pamphlet No. 21, "Instructions For the Use of Thermit in Railroad Shops." Every railroad shop man should have one.

PROFESSIONAL CARDS

CANADIAN RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and shipbuilders, contractors and promoters of railway enterprise. CANADIAN RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

NEW 8-FEED DETROIT LUBRICATORS

**CANADIAN DETROIT LUBRICATOR COMPANY, LTD.
WINDSOR, ONT.**

The new 8-feed Detroit Locomotive Lubricator is used on superheater Mallet compound locomotives. The six outside feeds lead to the high pressure steam chests, the high pressure cylinders and the low pressure steam chests.

The two middle feeds can be used for two air pumps, or for one pump and an intercepting valve or for one pump and a mechanical stoker.

A half turn of the oil control valve permits of all the feeds being started or stopped instantly without disturbing the adjustment of the feed regulating valves. A quarter turn cuts off all but the two middle feeds.

The new Detroit Locomotive Lubricators give greater oil mileage, easier control and better lubrication than any other lubricators on the market. Our circular tells why. Sales Agents, Taylor & Arnold, Limited, Montreal.

The Ball Watch

A Safety appliance for modern railroading—furnishes correct, reliable time for the operating of trains at high speed.

Built strong and simple in 16 and 18 size models and guaranteed to give satisfaction.

Have opened a Canadian office and desire your acquaintance.
Send for interesting booklet.

On construction work you should use a machine that will be busy all the time, because an idle machine means a loss in money.

THE BROWNHOIST LOCOMOTIVE CRANE

Can be kept busy all the time from the beginning to the end on any construction work—because it can be used for excavating with grab or drag-line bucket ; handling sand, gravel, stone, etc., with grab bucket or skips ; drive piling and sheeting with either steam pile-driver or drop-hammer ; place the concrete in elevated forms or in trenches ; pull piling and sheeting ; place the backfill ; switch the cars ; and all the miscellaneous hoisting work.

These Cranes are self-propelled ; made in various capacities ; eight and four-wheel ; and with either steam, electric, or gas engine drive.

Our Catalogs I and K show how and where the Crane is used. Write for these Catalogs.

Westinghouse AMM Automatic Brakes

WESTINGHOUSE AMM Automatic Brakes have every quality necessary to the best service on modern high-speed urban, suburban and interurban traction lines. They are designed for train service of not exceeding five cars, yet, by a straight-air feature that may be provided, single cars are operated with all the flexibility of straight air, the automatic safety features being always in reserve.

The distinctive automatic features of the Westinghouse "AMM" Automatic Brake Equipment are—quick recharge, graduated release, quick service and high brake cylinder pressure in emergency.

There is a Westinghouse Brake designed for every service; state your proposition to our nearest office. They will advise you, after analyzing your operating conditions.

GALT, ONTARIO

ASBESTOS LUBRICANTS

LUBRICANTS THAT

KILL HEAT

PRESERVE THE METALS

PREVENT FRICTION

This Mark

Our Guarantee

Asbestos Lubricants introduce an entirely new system by which a lubricant will retain its original efficiency, no matter what the conditions of wear or climate. The idea in this is to neutralize the distinctive effect of heat by producing a lubricant which in itself possesses the quality of resisting heat. Asbestos, which is the greatest heat-resisting substance, is amalgamated with High Grade Oils. This absolutely eliminates over-heated bearings and allows the machinery to run without the slightest friction, thus prolonging its life.

Journolene

For the journals of Railroad Cars, Street Cars, Pulp & Paper Mills, Foundries, Steamships, and all machinery of heavy duty.

Asbestolene

Destroys the rattle of manufacturing machinery, replacing it by a musical hum that tells of smooth running with maximum efficiency. Specially prepared for gears.

Spedolene

This is specially prepared for Motor Cars and Trucks. It will last longer than any other lubricant, will positively deaden noise, and will not run out at the gear cases. After once used you will always specify it.

Axolene

This is the highest grade of axle grease; it forms a perfectly smooth durable coating on the axle. After this surface is once formed you need use less than 1-2 as much Axolene as of any other axle grease. "Axolene will never cake."

Cupolene

For all kinds of compression cups and bearings. Cupolene is the ideal lubricant for armatures in Street Railway Cars. The wearing qualities are wonderful.

Write at once for our booklet on "SCIENTIFIC LUBRICATION." You will be interested in striving to cut down your lubrication expenses.

Head Office and Plant,

SHERBROOKE, QUEBEC

"Specify Titanium Alloy in your steel and iron"—say these men who know

Among them are numbered some of the world's leading chemists and metallurgists and men who specify Titanium Alloy, because it pays in dollars and cents. Their opinions are well worth your careful reading.

"The combination of Titanium with nitrogen is attended with the evolution of heat. It is the only indisputable example of the combustion of an element in nitrogen."

—Moissan,
Celebrated French Chemist.

"Titanium introduced as an alloy at once combines with the gaseous nitrogen present in the molten metal, forming a stable nitride. It is the formation of this stable nitride which prevents blowholes and thereby produces solid ingots, or castings."

—Dr. F. C. Weber.

"The reducing agents last added to the bath, carbon, manganese and silicon, destroy to a certain extent the existing over-oxidation, but they are able to remove the final traces unsatisfactorily and with the greatest difficulty. This service must therefore be performed by a very powerful reducing agent, such as Titanium, which should be regarded as one of the best and most available."

—E. von Maltitz,
Formerly with Illinois Steel Co.

"A hard steel with one per cent. carbon becomes fragile and useless when it contains 0.03 per cent. nitrogen, even when not tempered, and when tempered it will show numerous 'shakes' even when nitrogen is as low as 0.0116."

—Dr. Hjalmar Brauner.

"Titanium has one advantage which has caused its use to be recommended, namely, its high affinity for nitrogen."

—Bradley Stoughton,
Author "Metallurgy of Iron and Steel."

"Titanium *** has a stronger affinity for oxygen than have the other well-known deoxidizers; *** it probably gives the slag such a consistency that it separates more completely from the molten iron."

—Prof. Henry M. Howe,
Author "Metallurgy of Steel."

"The treatment of all steels with ferro-titanium for the purpose of the purification of the metal is strongly recommended. The presence of nitrogen to the extent of .02 or .045 or .035 in certain steels being enough to cause the metal to break asunder, destroying all elongation and reduction of area."

—H. Le Chatellier,
Prof. of Metallurgy, University of France.

For further proof of Titanium Alloy's efficiency, note its success in making steel rails that are the wonder of the railway world—rails that have proved in every test superior to plain Bessemer and open-hearth. It was Titanium Alloy that made the high-carbon rail possible.

You can get Titanium steel at any good mill or foundry at an extra cost ranging from 50c to about \$2 per gross ton. Titanium iron costs, extra, 25c and upwards per gross ton. When you order specify that our men shall look after the Titanium addition, so as to insure highest quality metal.

Output of Titanium steel in 1910 was 326,300 gross tons. In 1911 the output increased to 410,600 gross tons.

"We have lately been using Titanium in all of our castings and are getting results very much superior to those when this alloy is not used, particularly so in certain small pipe fittings and castings of this character which are subject to high pressure, and where the denseness of the metal is an important factor."

—Keystone Steel Casting Co.
Chester, Pa.

"The action of Titanium is to increase the strength of the mixture and to facilitate the throwing off of the impurities contained, and also to give a tougher and more durable chill."

—New York Car Wheel Co.,
Buffalo, N.Y.

"We have just received reports from a test bar, having seven pounds of ferro-titanium to the ton, which pulled 90,000 pounds to the square inch with 28 per cent. elongation. The carbon in this steel was only .19. The castings in this heat were subject to specifications which called for tensile strength not less than 60,000 and not more than 70,000 pounds."

—Strong Steel Foundry Co.,
Buffalo, N.Y.

"Have treated during the past two years in the neighborhood of 3,000 tons of steel rails with small percentages of ferro-titanium proportioned to, and with the result of eliminating, the 0.25 to 0.35 per cent. oxide of iron and slag which has been found in such rails prior to such treatment; also the included gases and also slags, the resulting products being practically free from all impurities."

—A Prominent Steel Maker.
Tests made by Professor M. Hokanson at the Carnegie Technical Schools demonstrate that the crushing strength of chilled iron is increased nearly 100% by the use of Titanium Alloy.

In summation: Every claim made for Titanium Alloy has been proved in service, and is based upon the careful researches of Enrique Touceda, C. E., Rensselaer Polytechnic Institute; Charles McKenna, eminent metallurgist; E. von Maltitz, for five years with Illinois Steel Co.; Prof. Bradley Stoughton, late of Columbia University; Prof. John J. Porter, of the University of Cincinnati; Prof. Henry M. Howe, Author of "Metallurgy of Iron and Steel"; H. Le Chatellier, Prof. of Metallurgy, University of France; Auguste J. Rossi, M. E., C. E.—and many others.

Ask for Booklet No. 30 and we will send literature explaining in detail the action of Titanium Alloy and how it can be used to your advantage. If you are particularly interested in rails, ask for rail diagrams showing superiority of Titanium Rails over plain open-hearth or Bessemer rails.

Titanium Alloy is made for Canadian Consumption by Electro Metals, Welland Ont.

C. G. E. Gas Electric Cars

The Gas Electric Car

Electricity is the silent and efficient transmission link, furnishing, power and brilliant illumination.

Is materially reducing operating costs and increasing traffic on branch railway lines wherever used.

The records of thousands of miles of operation in actual service prove the usefulness and reliability of this car.

Built as a Railroad Proposition

Strong, reliable, efficient and attractive. M. C. B. throughout. Just as the trolley car successfully displaced the horse car, so with equal success and profit the C. G. E. Gas Car is now replacing branch line trains.

Catalogue 4855 illustrates and describes the equipment and shows many car body designs. This will be sent you by return mail for the asking.

CAB SIGNALS

are the logical development of the proven requirements for certainly in the observation of signals. Their value will be readily recognized and warmly endorsed by any railway official who will fully study the application of Cab Signals as an auxiliary to present signaling practice and apparatus. As employed in the

Simmen System OF Railway Signaling

Cab Signals have proven their efficiency on a Canadian road where the Simmen System has been in regular and successful operation for over three years.

After a thorough service test on eighteen miles of the Indianapolis and Cincinnati interurban lines, one of the fastest lines in the Middle West, the Simmen System has been ordered installed on 82 miles more of the same road, with the approval of the State Railroad Commission.

With ample resources to insure complete responsibility, the NORTHEY-PLUMMER Company, Limited, is prepared to demonstrate the SIMMEN SYSTEM on any railroad.

Without obligation upon any inquirer, we solicit the opportunity to present the evidence of SIMMEN SYSTEM efficiency and reliability under any operating conditions. Literature furnished upon request.

NORTHEY-PLUMMER, Ltd.
TORONTO, - - - CANADA

3 A-8H in Tray

The Best Train Lighting System is Electrical The Best Storage Battery Is The Edison

The construction of the Edison Cell (consisting of element, electrolyte and container) constitutes a wholly new departure in storage battery practice, which immensely increases the range of usefulness in railway work.

In Railway Work Reliability is Essential

Where the strait storage, the axle generator, or the head-end generator system is used, reliability of the storage battery is the vital point. Why fuss with lighting equipment requiring constant expert attention to keep going and heavy to handle and to haul, when the storage battery of to-day is the care-free, long lived Edison Battery?

The Edison Battery saves one ton in weight per car on 32 volt lighting equipment. Its trays weigh only 100 lbs. and can be handled easily by one man. Its care and operation is as simple as A-B-C. It can be charged when convenient, and will stand discharged indefinitely without injury. It is totally free from "sulphation," or any sort of corrosion, making the storage battery the most dependable, instead of the most unreliable part of the train lighting system.

It will pay you to send for our newest bulletin No. 1018 "Edison Train Lighting Batteries."

The introduction of this improved shoe has revolutionized the Brake Shoe market of Canada. A new and definite basis of purchase has supplanted the old uncertain methods.

THEN it was a choice between a plain cast iron shoe and a steel back shoe.

NOW the plain cast iron shoe has been discarded, and the choice lies between the old steel back shoe and the new improved steel reinforced shoe shown above.

THEN there was only one method of reinforcement.

NOW you compare the efficiency of the old steel back shoe with that of the new improved steel reinforced shoe which is rapidly being adopted by the railroads. This shoe has no bulky lug or weighty back. It is one pound lighter and averages 80% of wearing material.

THEN lack of competition tended to keep the price of shoes at a high level, and only by signing long term contracts could you get a slight reduction.

NOW long term contracts are a thing of the past. You can buy shoes in the open market to better advantage, and always with the assurance that our improved steel reinforced brake shoe will give effective service and thorough satisfaction.

The Double Steel Reinforced Brake Shoe, made plain or flanged for passenger and freight service, also for locomotives, tenders and electric equipment.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	-	-	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	-	-	9.30 p.m.	Arrive Montreal, 7.00 a.m.
Arrive North Toronto	-	-	9.40 p.m.	Daily
Leave North Toronto	-	-	10.00 p.m.	Will Stop at Westmount

Electric Lighted Compartment Cars and Standard Sleepers for both points.

- ☐ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.
- ☐ The roadbed has been improved till it is unexcelled in Canada.
- ☐ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, ensure efficient service.

VANADIUM

THE STEEL OF ULTIMATE QUALITY

ELASTICITY

STRENGTH

TOUGHNESS

ENDURANCE

A set of Chrome-Vanadium steel tires 51-inch diameter in shifting engine service fourteen months, double turn, did 28,184 miles with maximum channel of 8-32 inch. Exceptionally uniform wear and freedom from flange cutting. Machined and put back into service they made in 13½ months 31,936 miles with maximum channel of 9-32 inch. Now in the third term of service and will be good for a fourth term, which is very exceptional for this yard.

Vanadium Steels are stronger; have greater endurance under repeated stresses and shocks; are more resilient and tougher; respond better to heat treatment and wear longer than steels without vanadium.

Our Ferro Vanadium is the Standard for Making Vanadium Steel

Safety Organization on the Michigan Central Railroad.

From carefully compiled records on all the units of the New York Central Lines, of which the Michigan Central Rd., with its Canada Southern division, is a part, it has been observed that of all the preventable accidents, the majority have not been due to defective conditions, defective equipment or improper methods of operation, but to that hard to control factor; the "human element." These records are kept every month, with the cause and nature of each accident, serving as complete data from which to make the deductions. With these rather alarming conditions before the management, a campaign of education was planned among the employees, to force home their responsibility in the matter, and the degree to which they can assist in the matter of reducing the preventable accidents by a proper co-operation on the part of all concerned.

With this in view, an organization was formed under the charge of Geo. Bradshaw, who was given the title of General Safety Agent, with offices in both New York and Chicago. Prior to this appointment, he had been engaged for about 10 years in the investigation and settlement of claims for personal injuries and death resulting from railway accidents. This placed him closely in touch with conditions as they existed, with a good working basis on which to evolve the safety organizations which are at present in successful operation. Covering this long term of experience, in touch with all sorts of conditions where accidents—preventable and otherwise—were observed, Mr. Bradshaw wrote a book called, "Prevention of Railroad Accidents," in which the more important of his observations are outlined. This book, as a basis for the employees to ground their plans for careful actions in future, has been distributed over all the New York Central Lines, to the number of 60,000. In addition to this, the subject is being kept alive by the periodical distribution of safety literature. This has resulted in the employees taking a personal interest in the subject, with an increased desire on their part to further the cause of safety.

In this book which has been so freely distributed over the lines, there are some very forceful arguments supporting the contentions that a large portion of the preventable accidents are due to carelessness on the part of the human element involved. Stress is laid on the use of an ounce of prevention, instead of a pound of cure in the form of monetary compensation for damages received. This sort of compensation can never make amends to widows and orphans, for example, for the loss of husband or father. The book, being addressed to employees, is confined exclusively to those phases of the subject on which they are able to direct their energies in support of the movement.

On one of the initial fly leaves of the book, there is a very trite remark, an abstract from a paragraph contained in the book, which ought to carry great weight with those for whom the work is intended. It is as follows:—"Injure an experienced man, a new man must take his place. A

new man is always an experiment. The new man to whom you extend the hand of fellowship today, may run a car over you tomorrow." This emphasizes to the employee the fact that even if he be not the victim, his chances of safety are decreased by the presence of indifferent employees about him. For this reason it should be the constant aim of every one to be ever on the alert to point out practices that are dangerous, and suggest alternative ones that eliminate the trouble.

Tables in the book, from statistics compiled by the U.S. Interstate Commerce Commission, show that injuries to employees are constantly on the increase. Whereas

Fig. 1.—Gear Protection on a Slotter.

in 1890, only one out of every 33 employees was in any way injured, in 1911 the ratio had increased to one in every 13. Truly a remarkable subject for thought. The number of accidents resulting in death has not increased to the same degree, but there is still a marked increase. All this has occurred despite the volumes of legislation passed by nearly every Parliament and Legislature in both Canada and the United States. Numerous means of making the lot of the railway employee safer in every way have been introduced as a result of this legislation, so that a great many systems have most of the approved safety devices and other kindred appliances. Over 99% of all trains are equipped with air brakes, reducing the necessity of trainmen traversing the top of the train, and about the same proportion have automatic couplers, making going between the cars unnecessary. Yet with these two greatest death traps removed, the accident record has been growing at an alarming rate.

The only conclusion that can possibly be derived from these records, is that the human element must be at fault. Nobody can say that the present day employee is less intelligent than his predecessor, for such is decidedly not the case with modern high specialization in the particular branch in which the employee is engaged, and the increased opportunities for attaining a higher degree of knowledge concerning the work in hand. This leaves the deduction that the workmen are becoming more careless with their work, and that it is in this direction that those concerned in the reduction of the accident record must look if conditions are not to continue becoming worse and worse as time goes on. Conservation is the present day motto, and the conservation of human life the highest attainment in that programme.

In Mr. Bradshaw's book, instances of everyday carelessness without number are cited from his own observation, the disastrous results occurring being in each case added. Among the incidents cited, a few will be here mentioned: The passing of a danger signal by a fast train because the signal was almost invariably with the engineer and not against; carelessness and a feeling of security prevented the engineer observing the signal. The neglect of car repairers to place warning signs at the ends of cars under which they were working; result, car bumped by yard engine, and workmen injured. Watchmen on car ferry failed to examine ports from a feeling similar to that of the engineer above; sea on the open port window side caused the boat to fill to the extent that saving was impossible, the boat sinking and crew perishing.

A long series of illustrations are given in the book to illustrate the commoner causes of accidents, and the reasons why they occur. These include the careless loading of baggage on trucks, placing baggage in car aisles, unblocked frogs, switches and guard rails; jacking up a track with the jack on the inside; using a hammer on the end of a tempered chisel; not paying attention to work around wood machinery; kicking drawbar jaw as cars are about to couple; opening elevator doors before elevator stops; standing on top of tender between coal chute and cab where the fireman would be caught if the locomotive backed up; hitting a tempered tool in a lathe with a hammer; standing between tracks to jump on the front footboard of a locomotive instead of to one side of track; leaving loose material lying around a freight yard where trainmen might trip and fall under the wheels; defective electrical insulation; sitting on brake wheel, loose baggage and trucks on station platform; where there are two trainmen one should observe each end in switching around; neglecting to flag back when train is stopped. These are but a few of the more common of the many instances cited and illustrated in this book, giving the employees for whom it is primarily intended an idea of the grossness of the careless methods of which they are guilty. In the majority of cases, it is more from lack of perception of the dangers in-

volve that the trouble occurs, and if this condition can be altered, good results will undoubtedly follow. It is a remarkable fact, too, that the majority of the injuries occur to the parties responsible for the carelessness, so that a change in the viewpoint will show that this safety campaign affects each man directly.

Another very prolific cause of accident is the tendency of people to use the railway line as a highway. F. V. Whiting, General Claims Attorney, New York Central Lines, in a recent pamphlet entitled, "Trespassers Killed on Railways—Who are They?" states from observations that cannot be disputed, that contrary to the commonly accepted belief that the majority of people killed or injured while trespassing on railway property are tramps or hoboes, the greater number are of a class of citizen of value to the community. They are largely artisans and business men, using the right of way for a short cut. For this, legislation would remove a great deal of the trouble, but in view of the laxity and impossibility of enforcing such legislation effectively, it has been suggested that all railway employees co-operate to the fullest extent in not only not walking on the right of way themselves, but in influencing others not to do so.

Complete organizations have been introduced on all lines of the systems. For each of the systems, lines east and lines west of Buffalo, the latter including the Michigan Central Rd., there is what is called a general safety committee, comprising on the lines east, the following permanent members:—(1) general manager (chairman), (2) assistant general managers, (3) general superintendents, (4) chief engineer, (5) engineer maintenance of way, (6) superintendent of motive power, (7) superintendent of rolling stock, (8) general claims attorney, (9) signal engineer, (10) chief mechanical engineer, (11) general safety agent, secretary. The General Safety Agent, with offices in both New York and Chicago, is secretary of both general committees.

On the lines west, the organization is

and the general safety agent.

On each division, there are two other committees—maybe more, depending on the extent, but always two—called the division safety committee and the shop safety committee. If more than one important shop exists, there is a committee for each. On

Fig. 2.—Gear Protection on Punch Press.

the Canada Southern division, there is a division safety committee for the whole division, and a shop safety committee located in the shops at St. Thomas. The organization of the division safety committee is as follows:—(1) division superintendent, chairman; (2) master mechanic, (3) division claim agent, (4) division engineer, (5) a road engineer, (6) a road fire-

the chairman.

The organization of the shop committee is as follows:—(1) master mechanic, chairman; (2) foreman, motive power shops; (3) foreman, car shops; (4) superintendent of tools and machinery, (5) a machinist, (6) a boilermaker, (7) a blacksmith, (8) a car repairman, (9) a painter, (10) such other employees or sub-committees as the local conditions may indicate, to be appointed direct by the master mechanic. The first four of these are permanent, with the balance appointed every six months by the master mechanic, the chief clerk of the latter being the secretary of the committee, which is called at the discretion of the master mechanic.

In the different committees, each member is supplied with a small note book marked, "Member of Safety Committee, for Safety Notes Only," in which it is his duty to jot down from time to time as it comes under his observation, any practices or conditions that can be improved. The instructions on the first two pages of the book explain their purport thoroughly. They are as follows:—

"This book is entrusted to you as a member of the local safety committee to be used as a memorandum book for matters pertaining to safety according to the following instructions:—

"1. Carry this book with you at all times while on duty, and when your term expires deliver it to your successor.

"2. Be on the alert to discover unsafe conditions or practices. When you observe, or anyone reports to you, any condition of way, track, structures, equipment, tools or appliances, or any method of practice, which in your opinion, or the opinion of the one making the report to you, is unsafe and which can reasonably be made safe, make at once accurate and complete memorandum of the particular condition or method observed or reported and also of what you, or the one making the report, may think should be done. Report such conditions or practices as soon as discovered to the proper person for correction, and make full report to the committee.

Fig. 3.—Protection to Star Feeder on Rip Saw.

slightly different from that on the lines east. On each line or group of lines under one management, there is a central safety committee, inferior to the above general committee. This central committee is composed of the general officers of the lines under the one management, as for example, the Michigan Central Rd. has a central safety committee at Detroit as well as the general safety committee at Chicago, to which it reports. On the lines west, the general safety committee consists of the assistant vice president, the general managers or other operating officials of the various roads, the general claims attorney

man, (7) a trainman, (8) a conductor, (9) a station agent, or station employee; (10) a supervisor of bridges or buildings, (11) a signal supervisor, or signal man; (12) a track supervisor, (13) a yardmaster, (14) such other employees or sub-committees as the local conditions may indicate, to be appointed directly by the Division Superintendent. The first four of these members are permanent, and the remainder are appointed for six months, the chairman having the appointment of new members at the expiration of that period. The chairman's chief clerk is secretary of the committee, which is called at the discretion of

Fig. 4.—Protection to Planer Gearing.

"3. Give proper attention to every matter called to your attention. When practicable, always make a careful investigation yourself of all matters reported to you. However honest may be the man who makes a report to you, there is always the possibility he may be mistaken or he may be reporting to you as facts matters which are 'hearsay' with him. Better see and investigate for yourself. Remember the local committee, when it meets, wants indisputable facts as to what exists, and sound, practicable opinions as to what should be done concerning any given statement of facts. As a member of the com-

mittee, your statements will be given extra weight and credit. So it is a duty you owe to the committee, to yourself, to other members of the committee, to procure and report accurately and completely the facts.

"4. So far as consistent with other duties, investigate cases of injury and damage to property to determine what may be done to avoid a recurrence from similar causes.

"5. Before making any recommendation which has originated with you or been suggested to you, think the matter over carefully. Determine first, whether your recommendation, if adopted, will make conditions safer, and secondly, whether its adoption is reasonable and practicable.

"6. If you see employees violating rules or instructions or taking unnecessary chances in their work, it is your right and

Each of these committees meets at the discretion of the chairman, and on these occasions the note books are called into service, the observations of the different members being discussed thoroughly on all sides, and definite action taken thereon. The smaller and purely local matters are acted upon at these meetings, but the larger questions that would concern other divisions of the system are referred by either of the local committees making the observation, to the central committee, which in turn, if the matter is of sufficient importance to warrant it, refers it to the general safety committee for final action. Thus the smaller things are settled locally, and the more important questions passed along for the benefit of others. These reports from the local committees are made not later than the tenth of the month following that in which the meeting was held.

Throughout this article, there are illustrations of the manner in which the shop committee at St. Thomas, Ont., has improved its opportunities by the protection of machinery. All these improvements have been made within the last few months, as it was only in June that the safety organization movement took definite form, the first meetings of the local committees at St. Thomas being held in July. The locomotive and car departments have set up a healthy rivalry in the matter of protecting machinery, resulting in a very good showing in the short time it has been used.

Fig. 1 shows a simple gear guard on the rear of a slotter in the locomotive department, made of sheet metal and smoke-box netting. In the same department is a typical gear protection on a punch press as in fig. 2. Fig. 3 is a sheet metal rip saw feeder star protection in the car department. Fig. 4 is a planer gear protecting railing around the pit containing the operating gearing; it is made completely from piping. Figs 5 and 6 are of wood machinery in the car department. The band saw is completely enclosed with swing doors. The construction prevents all possibility of the saw flying out and injuring the operator or bystander, and has that added advantage that the chilling breeze set up around the operator's feet by the rapidly moving saw is removed, a comfort in winter. The wood drill case is also simply made of sheet metal, with a hinged front door for oiling and examination of the

person every unsafe condition." The other cards are as follows:—"The more you insist upon carefulness on the part of others as well as exercising it yourself, the safer it will be for all." "The practice of getting on and off moving cars and engines results in injury and death to many employees. Those whose duties require such practice should exercise all possible care. Other employees must not jump on or off moving cars or engines." "Safety should be the first consideration of all employees. In all cases of doubt take the safe course." "Let every employee of the New York Central begin the new year with a firm resolution to do everything in his power to avoid injury to himself or others. This resolution, made and kept, will mean greater safety to employees for 1912." This latter

Fig. 5.—Band Saw Protection.

duty to warn them of the serious consequences which may follow such practices, to explain to them, if necessary, the proper and safe way, and to urge them to comply with rules and instructions and do their work in the safest way. To discharge this duty effectively requires tact and diplomacy, which, if you do not already possess, you can and should acquire by cultivation for your own personal benefit as well as for the advancement of the cause of safety.

"If you, in fact, feel a real unselfish interest in the safety of your fellow employees, you can, by the exercise of patience and good judgment, call attention to their shortcomings and secure their correction, and at the same time make friends for yourself and the cause of safety. You can do a great deal of good by a conscientious and proper performance of your duty in this respect."

The above clearly outlines the duties of the members comprising the committees. Each one, in his particular occupation, is to be ever on the alert for improved conditions of safety. To make the reports more thorough, the mechanics from the major portion of the local committees, for the reason that they are, in the course of their regular work, more in touch with the details of the conditions as they exist, whereas the higher men, at the best, can do no more than know the bigger problems, the smaller things being left to these juniors.

Fig. 6.—Wood Drill Protection.

card was posted in some shops of the New York Central Lines where the "safety first" movement was introduced earlier.

Other typewritten notices are posted on the shop notice board for that end of the safety propaganda. The first one is the following, and is taken from Mr. Bradshaw's book:—

"MEMORY GEMS FOR SHOP MEN.

"Don't wear loose, baggy, clothing where it is liable to be caught in machinery.

"Avoid walking on railroad tracks, and before crossing any track, 'Stop, look, and listen.'

"Be sure you replace all guards when through repairing machinery. Think about the other fellow.

"It is your duty, as well as your protection, to report unsafe condition to your foreman or superintendent.

"Stop machine before oiling, wiping or repairing it, and don't try to operate a machine you do not understand.

"Don't swing sledge or hammer that you know is working loose on handle, thinking it won't come off till 'next time.' You may not be hurt, but what about the 'other fellow.'

"Don't expect your helper to be as good a mechanic as you are. He isn't or he wouldn't be a helper. A little explanation as to the way the work is to be done may save injury to one or both of you.

"If you know of some machine not properly guarded, don't wait till some one gets hurt and say, 'I told you so.' Tell the

Fig. 7.—Typical Warning Placard.

working parts. The drill spindle to the left is also protected by having a collar shrunk on over the setscrew, making the head of the latter flush with the surface, and not dangerous to the loose ends of the operator's clothes.

In conjunction with this campaign for safety, the shops and other public places are having small placards posted at convenient points, printed with appropriate and trite remarks. These cards are of different colors, the one shown in fig. 7 being typical of the others. They are 6 x 9 ins., and there are five in the set. The one illustrated contains the following remark:—"Every employee should report promptly to his foreman or other proper

man in charge of the shop, before an accident happens, and ask him to supply proper guard.

"Avoid jumping upon moving cars or engines. Your work does not require it and you cannot afford to take the risk.

"Never strike tempered steel with hammer or other metal object. Many eyes are injured and destroyed from this cause every year."

In addition to the above which are posted in the shops, there are corresponding "memory gems" for the other branches of

railroading, each emphasizing the special risks which that class is liable to, with cautionary remarks thereon.

"The 'safety first' movement has been in use such a short time on the Michigan Central Rd. that no definite conclusion as to the efficacy of the scheme can as yet have been deduced, but indications point to its success if carefully followed out. It will be interesting to observe the extent to which the accidents will be reduced, as reflected in the accident reports compiled by the company in future.

Negotiations are under way to obtain the necessary authority for construction in New Hampshire.

As indicated by the foregoing, when all the projected construction is completed the G.T.R. will have a direct line from Montreal to Boston, a short line from Boston to Providence which will form part of a through rail and water route between Boston and New York, and a direct route from Montreal and northern New England to tidewater at Providence through the most prosperous sections of Massachusetts and Rhode Island. The branch between Douglass and Worcester, Mass., will also tap a rich manufacturing region.

The line between Palmer and Providence, which is now under construction, will be a single track for the present, but no expense is being spared to produce a road that can be operated at maximum economy. It extends in a general southeastern direction, passing through the cities of Southbridge, Webster and Blackstone, Mass., thence proceeding directly from Woonsocket to Providence, Rhode Island. In Massachusetts there are 57.69 miles of main line and 7.45 miles of siding. In Rhode Island there is a passenger line from Woonsocket

The Grand Trunk Railway Palmer-Providence Line in New England.

By H. Cole Estep, Engineer of Construction.

Contracts have recently been signed and construction begun on the new line of the Southern New England Ry., a subsidiary of the Grand Trunk Ry. Co., which is to extend from a junction with the Central Vermont Ry. in Palmer, Mass., to tidewater terminals at Providence, R.I. The new road, although important in itself, is

through Nashua, N.H., to Boston, 133 $\frac{3}{4}$ miles. In all, these projects will require approximately 275 miles of main line, together with the numerous sidings and industrial spurs and extensive terminals in Providence and Boston.

The Palmer-Providence line in Massachusetts is being constructed under permission

The G.T.R.'s Palmer-Providence Line and Proposed Boston Line.

only a part of a general scheme which has been developed by E. H. Fitzhugh, President of the G.T.R. properties in New England, for the extension of this system into the rich commercial territory in Rhode Island, New Hampshire and Massachusetts, including the city of Boston, hitherto occupied almost exclusively by the New York, New Haven & Hartford Rd. and its affiliated interests. The G.T.R. plans, in addition to the Palmer-Providence line, include a line of 35.9 miles from Blackstone, Mass., a station on the new road 17 miles north of Providence, to Boston; also another branch from Douglass on the Palmer-Providence line to Worcester, Mass., 21 miles; and finally a road extending south-eastward from a junction with the Central Vermont Ry. at White River Junction, Vt.,

of the state railway commission; the construction of the other lines in Massachusetts, including the Boston terminals, has been authorized by a special act of the legislature; and similar legislative authority has been obtained for the work in Rhode Island. The Massachusetts law provides that the various lines authorized must be located within one year, relocations being permitted; construction must begin within a year from the time of filing the location, and be completed in three years. Under certain conditions the state railway commission is granted the power to extend these periods. Two companies have been organized for construction purposes, one in Massachusetts, the Southern New England Railroad Corporation, and the one in Rhode Island, the Southern New England Ry. Co.

to the Union station at Providence, 17.13 miles, and a freight line from a junction with the passenger line in North Providence to docks at Fielas Point, 9.89 miles, together with 37.76 miles of sidings and a special spur of 0.25 miles on Allen's avenue. The work, therefore, includes 84.71 miles of main line and 45.45 miles of sidings and spurs, or 130.16 miles in all. The most extensive switch yards and terminals will, of course, be situated at Providence.

As soon as authority for construction had been obtained and the line definitely located, the work of obtaining right-of-way began. This was a much more difficult task than it is in less thickly settled portions of the country, and many perplexing obstacles had to be surmounted. The Massachusetts law limits the width of the

right of way to 82.5 feet, which is insufficient in deep cuts or on high fills. Great difficulty was also experienced in defining the various parcels of land purchased for right of way on account of the indefinite wording of most New England deeds. New England was never surveyed into sections, and land is generally described in the deeds by metes and bounds and by reference to old monuments or land marks long since disappeared. For instance, a farm belonging to Wm. Brown is described as consisting of 17½ acres extending from the south boundary of Henry Bowen's land on the north to the north boundary of Alfred Thompson's on the south, etc. It was necessary for the engineers of the railway to accurately determine these boundary lines, and the problems involved may be readily imagined.

The accompanying profile of the line shows the three principal summits which it was necessary to cross, together with the Quabaug, French and Blackstone rivers. These formed the chief controlling points in the location. Starting at elevation 320 at Palmer the line ascends rapidly to the Brimfield summit, 704 ft. above sea level,

system. The spirals, however, are much longer than customary. For example, eleven 33 ft. chords are used in laying out the spiral on a 6° curve, the length of the spiral being 363 ft. On the new line of the Chicago, Milwaukee & Puget Sound Ry. in the west, the spirals on similar curves are only 180 ft. in length. In fact the 6° curves with long spirals on the Southern New England Ry. are about equivalent to straight 4° curves, assuming ordinary angles of intersection. With a 44° angle, the length of a straight 4° curve is 1,100 ft., while a 6° curve with long spirals on the Southern New England is 1,092 ft. in length for the same angle of intersection. The curves will be elevated according to A. R. E. A. standards for 40 miles per hour.

The line includes a great deal of bridge work. Two miles from Palmer occurs the first crossing of the Quabaug river on a steel viaduct 585 ft. long; the same bridge also crosses the state highway and the Central Massachusetts Electric Ry., the maximum height of the viaduct above the valley being 63 ft. Separated from this viaduct by a fill of 80 ft. long is a through plate girder bridge crossing the Boston &

The preliminary layout provides two sets of team tracks with a capacity of 136 and 117 cars, respectively, together with inbound and outbound freight sheds. The former is to be 50 x 670 ft., provided with yard and service tracks having a total capacity of 100 cars. A coach yard will also be located in the immediate vicinity.

The freight line to Field's Point leaves the main or passenger line at the northern limits of the city of Providence, and with a wide sweep first to the south and then to the east reaches its destination on Narragansett bay. This line is 9.89 miles long. At the Field's Point terminus docks are being constructed by the city of Providence.

The general contract for the construction of the Massachusetts portion of the road has been awarded to J. Marsch, Chicago, and the contract for the Rhode Island portion to the O'Brien Construction Co., New York. The general contract in Rhode Island does not include the tunnel under the city of Providence. This will be covered by a separate contract to be let later. The steel bridges will be fabricated by the American Bridge Company of New York,

Condensed Profile, Grand Trunk Railway Palmer-Providence Line.

nine miles from Palmer. Between these points the Quabaug river is crossed twice. From Brimfield there is a gradual descent for 15 miles to elevation 400 at Sandersdale. Leaving this point the ascent is rapid for the next five miles to the Dudley summit, elevation 545. Next comes a descent into the French river valley and a long climb out on the eastern side to elevation 717 at Mt. Daniel, 41 miles from Palmer. From this point the line drops by easy stages to sea level at Providence.

The location of the line, however, involved much more than simply finding the most advantageous route across the various summits and rivers between the terminals, for the problems encountered in numerous grade separations also had to be met. In the entire length of the line there are no grade crossings, even the country highways being elevated over or depressed under the railway in every instance. In fact, the location resolved itself into a task of suitably treating the various crossings with as little disturbance to existing grades as possible. In many instances it was, of course, necessary to change the grades of streets and highways, but no attempt was made to alter those of the steam railways crossed. In Rhode Island alone there are approximately 69 highway crossings carried either over or under the track, semi-tunnels being generally employed where the highway goes over the railway. As a result of the necessity of avoiding grade crossings, coupled with the desire to leave existing street grades in the towns unchanged wherever possible, a detailed profile of the line in Rhode Island through comparatively level country somewhat resembles the layout of a roller coaster.

In spite of these difficulties the line has been located with a maximum grade of 1% and 6% maximum curves. The grades are equated 0.04% for each degree of curve, and the curves are spiraled on the Searles

Albany Rd.

Four and a half miles east of Palmer is situated the largest steel bridge on the line. It carries the track of the Southern New England Ry. over the Quabaug river, and also over the state highway, a wagon road and the Boston & Albany Rd. The bridge is 1,252 ft. long and 115 ft. above the river, being constructed on a 6° curve and 0.76% grade. It is a viaduct consisting of 11 steel towers connected by 70 ft. girder spans; the towers are about 40 ft. long on top, and of sufficient width to carry the single track.

Another important bridge is situated at North Webster, 36 miles from Palmer. At this point the French river, together with the Boston & Albany Rd. and Norwich & Worcester Rd., are crossed. A timber trestle 1,052 ft. long has been planned. It has a maximum height of 55 ft. and is considered to be more economical than a steel bridge would be in the same place. It is estimated on a 5% basis that where the cost of a steel bridge exceeds that of a wooden one by more than 90%, the latter is the more economical.

Near Millville, 55½ miles from Palmer, will be situated a steel and masonry bridge, approximately 500 ft. long, crossing the Blackstone river and the Worcester-Providence and Boston-Willimantic lines of the New York, New Haven & Hartford Rd. The Boston-Willimantic line crosses over the Worcester-Providence line and the Southern New England Ry. over both.

In the city of Providence, the passenger line enters from the north via Randall's and Leonard's ponds, and passing through a 2,400 ft. tunnel under northwest Providence, between Douglas avenue and Jewett street, emerges at the union passenger station in the centre of the city. A terminal for handling miscellaneous freight shipments will be built adjacent to this line between Valley street and the Woonsocket river,

and erected by the Strobel Steel Construction Co. of Chicago.

The line is being constructed under the supervision of E. H. Fitzhugh, President of the Southern New England and the Central Vermont railways, assisted by G. C. Jones, Vice President. The engineering officers include H. C. Estep, Engineer of Construction, and J. P. Snow, of Boston, Consulting Bridge Engineer.—*Railway Age Gazette*.

Improved Baggage Checks.—A baggage check, which is expected to lessen the number of errors and complaints, has just been placed in service by the Pennsylvania Rd. The duplicate portion of the new check is provided with spaces in which are printed a number of the principal "bad order" conditions in which baggage is frequently received for checking. A check, on being delivered to a passenger, will be punched to show whether the piece of baggage is a trunk, suit case or valise, fibre case, or tool chest. Other punches will show the condition in which it is received, whether the bottom, side, top or end is broken, lock or handle broken, hinges loose, old or worn, or whether the piece of baggage is open. In this way the duplicate check will contain a full description of the condition of the baggage when received for shipment. The number on the tag portion of the check is placed at the bottom, while on the duplicate portion it is printed at the top, so that the two can be readily matched when making delivery of baggage. It is expected that with the use of this new form of check the liability of mismatching numbers will be minimized, the delivery of baggage expedited, and the number of claims greatly reduced.

The Quebec Public Utilities Commission has issued general orders re rules for pipes crossing railways and re protection of forests from fires by railways.

Practice of Safe-ending Tubes at the Grand Trunk Railway Stratford Shops.

In shops such as those of the G.T.R. at Stratford, Ont., more attention to the proper planning of the work through the shops is required than in a small shop where the number of locomotives to be handled is small. In the Stratford shops, practically

Fig. 1.—Lifting Tubes to Rattler.

all the locomotives on the Middle and Southern divisions and a large percentage of the Northern division, are handled for repairs, and when the repairs are classed as heavy, calling for the total dismantling of the locomotive, the tubes at the same time require safe-ending. Considering the

the process.

The first step in the process is the removal of the tubes from the boiler in the usual manner. The tubes as removed are placed in trucks of the form shown in fig. 1, these trucks being mounted on a platform in front of the locomotive smokebox, where the tubes can be easily handled without the operator who is removing them, moving from the one position. The truck, loaded with the complete set of tubes from one boiler, is picked up by the travelling crane and carried down the shop to the safe-ending department, and deposited on the plated floor.

Down the centre of the shop, on one side of the safe-ending department there is the built up structure to the right in fig. 1, which houses the tube cleaning apparatus. The tube truck on the plated floor is run along on to the track in fig. 1, a jib crane operating over its whole length.

There are two tube cleaners, of the box rattler type, with supporting trunnions at the level of the platform on the right. There is a box structure closing in the rattler, and on the platform side of this housing are doors for the insertion of the tubes in the opening in the rattler. On to this platform is raised the set of tubes from the truck, leaving the latter on the track, the tubes being deposited in a pile. Through the door openings, the tubes are rolled, until the whole are introduced into the rattler. The doors are then closed, and the rattler put in motion, a stream of water being incidentally turned in from one of the end trunnions. This continues until the tubes are thoroughly free from scale.

After the proper period of cleaning, the rattler is stopped, with its door downwards, the latter on opening dropping the tubes into a truck placed in the box enclosure directly beneath the rattler. The door from which the tubes are removed is in the background in fig. 2, the tubes as removed being in front, to the right, in the same illustration.

Fig. 2.—Cutting off First Bad End.

extensive mileage, and the nature of the country through which most of the company's lines operate, developing heavy traffic, the number of locomotives at all times undergoing repairs calling for the safe-ending of the tubes is large.

The safe-ending department is located in one end of the locomotive shop, adjacent to the erecting floor, from which the tubes are received. The whole floor of the machine part of this department is covered with boiler plate, for the easy movement of the tube-carrying trucks in the course of transition through the several stages of

The next operation is that of removing one of the damaged ends in the manner shown in fig. 2. This machine is located right at the outlet from the rattler, so that a minimum of handling by the operator is required. The machine employed is of the hollow spindle type, built primarily for this purpose. The tool carriage is secured in a stationary position on the lathe bed, and to the front of the tool carriage there is a swing stop, which can be swung out in line with the tube, so that the operator has a stop against which to push the tube when entering it from the other end, where

the chuck face is invisible to him. The firebox, or lightly damaged end, is the one operated on, a very short piece being removed with a cutting off tool. The cutting off tool is so ground on the end as to give a scarfed edge to the tube end. The tool is operated across the carriage by the vertical lever in the hands of the operator. The scarfed tubes are piled in another truck on the near side of the machine on leaving

Fig. 4.—Automatic Safe-end Machine.

it. All this part of the shop is floored with plate. This machine is midway between the two rattlers, and so can handle either equally well.

In line with this last machine, and in the rear of the position in fig. 2, are located the machines for the next operation of applying

Fig. 3.—Flaring the Cut-off End.

the safe-end. This is shown in fig. 3. The truck from the last position is pushed along only a few feet into position on the left of the operator in this illustration. From this truck, they are taken one at a time and placed in the oil furnace in the left background for heating to a working heat on the scarfed end. The machine in the centre of the view is for expanding the ends to fit over the safe-end. The heated tube is placed in the vise jaws of the machine up to the cross plate, used for locating the tubes. The vise jaw to the left is operated by the cylinder, to the

plunger of which it is connected, the cylinder operating from a valve operated by the operator's foot. At the other end of the machine there is another air cylinder, connected to a crosshead in the centre. On the front face of this crosshead there is a taper pin, which is forced into the tube end by operating the lever on the front corner of the machine. This flares the end sufficiently to slip on to the scarfed end of the safe-end piece. This safe-end piece for the tube is mounted on a mandrel on the face of the stand in the right foreground, with the scarfed end out. Immediately

the rear, shown in more detail in fig. 5. On the front face of the machine, attached to the other end of the worm gear shaft across the machine, before referred to, there is a slotted crank, to which is attached in any position along this slot by a clamp nut, the forward end of a connecting rod. The other end of the connecting rod is attached to a horizontal bar, guided in bearings on the front of the machine, all as shown in the foreground in fig. 5. At the rear end of this guided bar, there is an upward arm, attached at the upper end to a block through the centre of which the tube

along the back face of the machine, driven in turn from the large gear which engages the pinion on the spindle of the machine.

The operation of the machine is as follows: With the tube in position for cutting off, the cutter rises from below, severing the tube, the tool at the same time scarfing the end. The piece as cut off drops down the inclined plate in front of the steadyrest, the cutting liquid running back into the machine through the slit in the plate. At that point, the setting of the cams on the worm gear shaft causes the release of the chuck, and simultaneously the feeding

Fig. 5.—Automatic Feeding Mechanism.

Fig. 6.—Automatic Chucking Mechanism.

on removal from the flaring operation, the still hot end is rammed on the guiding mandrel carrying the safe-end, the impact of the operator driving it on being sufficient to hold the two parts together, although the safe-end is cold. The united pieces are placed on another truck on the right, and moved on for the next operation.

The operation of safe-ending will be interrupted for a moment at this stage to observe the manner of making the safe-end pieces. A machine for automatically producing these pieces is shown in fig. 4. In construction it closely resembles an

in the machine passes. This arm operates a clamping dog on each side of the tube, which clamps the tube in this block as the tube moves forward, but slips on the return. This is the tube feed.

The chucking of the tube is also automatic, the mechanism for the operation of the chuck being located on the rear side of the machine in fig. 4. On the top of the machine an air cylinder is pin connected at the rear to the frame. The plunger rod is attached to an arm which encircles the chuck, and by which the chuck is opened and closed. The valves

mechanism grips the rear end of the tube and feeds it through the chuck the length of stroke to which the adjustable crank on the front of the machine is set. When fed forward that amount the other cam on the worm gear shaft causes the chuck to close, the operation from that point being repeated.

Returning to the operation of safe-ending, the truck of tubes on the ends of which the safe-end pieces have been forced is moved along a little further to the position shown in fig. 7, the ends of the tubes mounted on the truck being visible to the left in the

Fig. 7.—Swedging First Tube Ends.

Fig. 8.—Cutting-off and Swedging Second End.

automatic screw machine, the motions on it being very similar. It is, however, a much simpler machine than an automatic screw machine, from the fact that cutting off and feeding forward are the only operations required. The stock tube is held in a hollow spindle, the front end being guided in a solid steadyrest on the front end of the machine. The tool rises from below, being forced upward into the tube at the rear face of the steadyrest by a cam on the worm gear shaft across the machine. The tube is fed forward after each cut, by the attachment guided on the bars to

for operating this chuck are shown in detail in fig. 6. To the right, an air pipe from below connects with twin valves attached to a projecting arm from the side of the machine. From each of these valves a flexible air connection leads, one to each end of the chuck actuating cylinder. On the end of the worm gear shaft are two small cams, in the plane of the valve plungers which they operate. One cam lets air into the cylinder for the closing, and on the release of that end of the cylinder, the air is let into the opposite end. The worm gear is operated by a worm from a shaft

view. Here, the end carrying the safe-end is placed in the furnace, and heated to a welding heat, when the part to be welded together is placed in position under the vibratory air hammer, the operation the operator is performing in the illustration. The hammer dies to the right of those in use for this last operation are used for swedging down the tube end for the copper ferrule used between it and the tube plate. Between these two operations, the loose scale on the outside of the tube is scraped off by rubbing the tube back and forth a few times in the cut outs in the plate

projecting from the right side of the hammer frame. This operation completes the operations on one end of the tube.

From this point the tube truck is moved some little distance further down the shop on the plated floor to a position to the left of the point in fig. 8. Here, the tubes have the other bad end heated to a working heat in the furnace on the extreme left, from which they are carried over to the saw, the table of which is in the left foreground. The tube is here placed in a cross carriage on the table, this cross carriage being counter-balanced by weights over pulleys on the front edge of the table as in the lower left hand corner of the illustration. The hot saw, revolving at a high velocity, rapidly cuts off the bad end, cutting the tube to length, the tube carriage having a gauging stop.

The tube thus cut off is passed across the machine to the machine to the right in

other end being supported in wooden blocks on a post on the rear of the carriage of the lathe, to the left of the tool post. These wooden blocks, which clamp together, act as a steadyrest. The tool post carries a cutting off tool and a marking tool, the latter to the left of the cutting off tool at a distance equal to the length of the finished ferrule. The marking tool is set back just far enough to mark the surface of the tube as the cutting off tool is through the tube. This leaves a mark for the next cut, which the operator can quickly follow, with a marked saving in time. On each ferrule being cut off, the operator supports a scraper on the end of the cutting off tool, and scrapes off the burr on the inner edge of the tube end. By this method the ferrules are quickly cut off, and the removal of the burr makes them at once usable in the firebox end of the boiler, fitting over the swedged ends of the tubes.

R. L. Fairbairn, General Passenger Agent, Canadian Northern Ry., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

Fig. 9.—Testing Safe-ended Tube.

Fig. 10.—Cutting off Copper Ferrules.

the illustration, a machine similar in construction to that in fig. 3, the end of the tube being here flared. The cross cylinder clamps the tube, and the end cylinder flares the end. The balance of the tube department is in the background in this illustration, fig. 8.

The tubes, with both ends thus finished out, are ready for testing in the machine in fig. 9, located a little further along the shop. The head at the far end of the machine is stationary, but that on the near end is movable, like the tailstock of a lathe, to accommodate varying lengths of tubes. The tube is placed up against a washer on the far head, and a plunger on the near end, carrying a washer face, is forced out against that end. Water is introduced under pressure through an opening in the centre of each end washer plate. It is customary first to introduce the water from the far end before closing up the near end, as this forces all air out of the tube, the bed of the machine being on an upward incline toward this end. On the filling of the tube with water, this end, which forms a differential cylinder, is closed, and air pressure introduced behind the large end of the differential piston, producing a water pressure of about 300 lbs. in the tube, the gauge on the wall to the rear indicating that pressure. Both valves are on the front of the machine bed in the position assumed by the operator. To save time in draining out the tube after testing, the large box built up of boiler plate is placed at the far end of the machine, the tubes being drained therein before placing on the truck for removal to the erecting shop, where they are again placed in the boiler.

The copper ferrules used in the firebox end of the tubes are cut off in the manner indicated in fig. 10. A long copper tube is chucked in the lathe head to the rear, the

Proposed Electrification in Chicago.—A conference of operating officials representing 30 railways and engineering staff of the Chicago Association of Commerce committee on smoke abatement and electrification was held recently to consider the mechanical difficulties presented in substituting electrical for steam operation. Each representative was requested to present his own views on the subject, based upon the operating conditions on his lines. In discussing the question of using a third rail in yards some of those present said that the network of track is already so complicated that the addition of an extra rail would increase materially the danger to yard employees and at the same time decrease the efficiency of the service. The use of the overhead trolley instead of third rail was thought also to be unsatisfactory as it would endanger the life of men on the roofs of cars.

Railway Mechanical Methods and Devices.

Sawing Pilot Slats at Grand Trunk Railway London Shops.

A very simple method of forming the horizontal slats that compose the body of the standard G.T.R. pilot is in use at the company's shops at London, Ont., in the woodworking department. The slats of wood are finished first on all sides, and the ends trimmed off at an angle to fit the backing and the central ridge of the pilot. The difficult part of machining the slats lies in the forming of the front bevel edges.

In these shops, this part of the work is performed on the band saw in the manner illustrated. Across the table to the right of and parallel to the saw, there is clamped a guiding strip of wood. A few inches to the left of the saw, there is clamped another piece, this latter being tapered from the front to the rear. The point of this wedge piece is in a line across the table at right angles to the saw, so that when the end of the slat is laid on the table the end will be level, and just ready to ascend the slope of the wedge. The cut of the saw thus enters at right angles to the face of the slat.

As the cut is pushed forward, the front end of the slat, which continues to rest on the wedge piece, is gradually raised, tipping the slat up on edge against the guiding strip. This tipping effect increases to the end. Experiment determines how far off to the left the outer end of the wedge should be located to give the right amount of tipping effect. Each one of the slats in the height of the pilot has a different amount of edge cut off to give the smooth sloping surface to the face of the pilot, each of the slopes being a matter of experiment. The slats for one side of the pilot are made this way, and the corresponding slats for the other side are made by reversing the

Motor Driven Pipe Threader at Grand Trunk Railway Port Huron Shops.

A new use for the air motor is shown in the accompanying illustration of an air-operated pipe threading machine at the G.T.R. shops at Port Huron, Mich. The pipe threading machine is of a standard make, of the small kind designed for band

Motor Operated Pipe Threading Machine.

found to be a most useful appliance around the shop for cutting the threads on pipe, and is naturally much more rapid than operation by hand.

Tender Truck Repairs at the Grand Trunk Railway Stratford Shops.

In the G.T.R.'s locomotive repair shops at Stratford, Ont., R. Patterson, Master Mechanic, the tender department is in a wing of the large locomotive shop. The various repair tracks in the tender department are entered from a travelling table down one side of the shop. The tracks at the end from the locomotive shop are for the tender tanks while under repair, the tracks at the other end being set aside for the truck repairs incidental thereto. The two tracks set aside for this purpose are shown in the accompanying illustration, where it will be noted that instead of having the tracks on the level of the floor, as in the usual repair shop, they are raised about a foot or so above the ground in order to make the tracks easier of access for the mechanics, requiring no bending over.

The trucks, as they come from under the tenders at the end of the shop to the left in the illustration, are carried along to the two tracks shown, which are located in the end of the locomotive shop, being handled by a 25 ton electric travelling crane, which picks them up and places them on the elevated tracks, where they are easy of access by the workman.

The tracks are raised on short cast iron standards, ribbed at the four corners for rigidity. The rail base fits in the recessed top, into which it is secured. The truck can be dismembered on these elevated tracks, and the bolster is even then, resting as it will be on the elevated tracks, in a convenient working position.

Sawing Pilot Slats to Shape on the Band Saw.

Elevated Tracks for the Repair of Tender Trucks.

positions of the guiding strip and wedge.

It is customary to make up several pilots at a time, so that the operator can make up that number of slats of each size at a setting, the location of the wedge for each size being known.

The British Columbia Government has resumed possession of some 4,000,000 acres of land, which had been granted in aid of the British Columbia Southern Ry. and the Columbia and Western Ry. The lands have been acquired from the C.P.R., which took over the rights and properties of the two companies named at 40 cents an acre.

operation on a supporting bench, conveniently located to the job. In this case the motor is mounted on a bench in the pipe fitting department.

The air motor, connected to the driving pinion of the pipe cutter, is mounted on a supporting carriage in front of the table end, in a permanent location. This supporting frame is built up of wooden scantling, meeting at the top, in which there is a recess on both sides for the reception of the handles. There is a permanent air connection to the end of the handle, the intake of the motor, controlled in the usual manner with the handle valve. This has been

The Canadian Northern Prairie Lands Co. sold 320 acres during August, realizing \$4,960, or \$15.50 an acre. There remain 68,600 acres unsold.

During August, 25 employees were killed, and 53 were injured, in the course of their work in connection with the operation of steam railways in Canada. Of the fatalities, 10 were due to collisions, six to being run over, two each to being crushed by cars and to being struck by trains, and one each, to jumping from a locomotive, to a fall, to falling material, to being buried under coal in the tender presumably while same was being filled, and to electrocution.

Grinding in Throttle Valves at the Grand Trunk Railway Stratford Shops.

In the steam pipe department of the G.T.R. shops at Stratford, Ont., there is in use a rig for grinding in throttle valves, which is both effective and simple in construction, but withal a very cheap rigging to make up.

The throttle valve is held on two projecting strips of bar iron from a bench, by the two supporting lugs, bolting the valve securely into place. The valve is revolved on its double seat by an air motor attached to the upper spindle, emery and oil being introduced between the rubbing surfaces in the usual manner.

The principal feature of the device is an attachment for raising and lowering the valve, with regard to the seat, in the approved manner, in order to gain a smoothly ground in valve. On a plate, shown in the accompanying illustration on the ground below the valve, there is attached a vertical supporting bracket for the guidance of a vertical rod. The lower

Device for Grinding in Throttle Valves.

end of this rod rests on the shorter end of a fulcrumed lever, on the longer end of which the operator presses his foot as shown. The vertical rod is in two sections, telescoping each other. The upper section is a length of pipe fitting loosely over a rod, the pipe having diametral holes at frequent intervals along its length, for the adjustment of the length of the combined rod.

The rod is so adjusted for length that when the foot lever is in a horizontal position, the upper end of the rod, passing through the valve spindle hole in the lower end of the casting, touches the lower surface of the double valve. The operation then is that the operator, as the valve is revolved by the air motor, presses on the foot lever, raising the valve off its seats. This permits a flow of the oil and emery, when the valve is again lowered and the grinding is continued. This operation is repeated as long as necessary.

The lifting attachment is movable into any required position, and is not secured to the floor in position under the valve. This makes the attachment of use in similar positions elsewhere.

The Handling of Sections and Section Foremen.

Following is the report of a committee of the Roadmasters and Maintenance of Way Association of America, presented at the annual meeting at Buffalo, N.Y., recently:—

HOW TO SECURE FOREMEN.—It is agreed that, to secure competent foremen, good wages must be paid and to secure student foremen wages should be paid sufficiently in excess of section laborers to make it attractive to young men with fair education, ambition and ability, to induce them to stay in the track department, rather than work on farms or other places where wages may be higher but steady employment uncertain and the chance for promotion obscure.

Student foremen should be placed with the most progressive section or yard foremen so that they may learn all the latest methods and be taught in the most up to date manner how to acquit themselves when promotion comes to them and they are thrown on their own resources. It goes without saying that section or yard foremen, so designated as teachers of prospective foremen, will endeavor, out of personal pride and with characteristic loyalty to their company, to turn out men who will be a credit to their instructors. These men should be paid 25 cents or more a day, in addition to the pay of a regular track laborer, for a day of 10 hours and they, as well as all foremen, should be paid for overtime over the specified working hours, the same as other employees.

If after working one or two years on a straight section, student foremen are moved into a terminal or yard, they will get experience in switch work, heavy track repairs, and work of this character, and an insight into many phases of track work not encountered on sections, thus making them much more resourceful when the time comes for them to assume control of their own sections. With proper training, as outlined, and with the prospect of inviting wages as a section, yard or extra gang foreman, when the time for promotion comes, the problem of securing competent foremen will to a great extent be solved.

There should be four student foremen on every division of 25 sections and additional ones where the number of sections exceeds this. A yard foreman should receive more wages than a section foreman and it should be considered a promotion for the latter to be placed in charge of a yard. The pay of an extra gang foreman should be larger than that of a yard foreman and men selected to handle extra gangs should be next in line for the position of assistant roadmaster. It should be the settled policy of every railway. All promotions from that of student foremen and extra gang foremen to roadmaster should be held before the wide awake, ambitious man as an inducement for him to work in the maintenance of way department.

A merit system is also recommended, whereby due credit can be given to foremen in every capacity for alacrity, resourcefulness and initiative in cases of emergency, together with a full appreciation of their duties and responsibilities both night and day. The position of foreman in the track department would then be desirable.

LENGTH OF SECTIONS.—Where the equivalent mileage basis of designating length of sections is not used, a section of 4 tracks should be 2 miles long; 3 tracks, 2½ miles; 2 tracks, 3 miles; and 1 track, 5 miles. Equivalent mileage is usually figured on the principal railways at the rate of 1 mile of main track to a mile; 2 miles of main passing siding to a mile; 3 miles of

spur, or commercial track, to a mile; and 15 switches to a mile. In yards, equivalent mileage will regulate the territory which a foreman with a given number of men should have under his jurisdiction.

ORGANIZATION OF SECTION.—Each section should consist of a foreman and one man to each mile of track in summer and one man to two miles of track in winter, when conditions are normal. In severe weather, however, when ice forms and snow storms prevail, a foreman should be allowed to use his judgment in having extra men to keep switches clean and tracks open and to assist wherever necessary in order to keep traffic moving from the physical standpoint of operation in such cases. Each section foreman should have an assistant for every 10 men, the assistant to work the men and prevent them from getting in the way of trains.

The word "section" embraces all main line tracks and main line switches, sidings, freight house tracks, etc., at all way stations and through large yards; yard sections to include all tracks of every description outside of main line switches.

Proposed Changes in M.C.B. Rules of Interchange.—The Master Car Builders' Association has recently taken a special letter ballot of members on proposals to abrogate the rules which penalize the delivering line for owners' defects, and to add a direct 10% to the total labor and material charges as shown on the monthly bills. Both of these proposals are recommendations of the arbitration committee, and have been approved by the executive committee.

Design, Construction and Inspection of Locomotive Boilers.

Following is the conclusion of the American Master Mechanics Association Committee's report on this subject, the first portions of which were published in Canadian Railway and Marine World for September and October:

KELLEY METHOD OF STAYING FLUE SHEETS.—Twelve members advise that they have had no experience with this method. Two members that have used this method advise that no advantage was found and have removed the same. Another member reports that he used five stays in small

Fig. 27.—Method of Staying Flue Sheets.

boilers containing about 200 flues, and three stays in larger boilers, and believes that it is good practice and tends to prevent flues leaking. Another member is experimenting, as shown in fig. 27, but cannot give any information as regards the performance.

TUBE.—It is the consensus of opinion of those reporting that 2 in. tubes are preferred, until the length of tube exceeds 16 ft., when 2 1/4 in. tubes are preferred.

Taking into consideration that a 2 in. tube will give a greater amount of tube heating surface, and the cost of maintenance is less, and less damage is done to the tube sheets in working over flues, your committee suggests that further consideration be given to the use of 2 in. tubes in lengths greater than 16 ft.

THICKNESS OF FRONT TUBE SHEET.—Half inch and 5/8 in. being used by the majority of the members who replied to the circular. One member uses 9-16 in. and another uses 3/4 in.

THICKNESS OF BACK TUBE SHEET.—One half in. tube sheets are being used by 16 of the members. Two members use 9-16 in. and one uses 5/8 in. All but three report having more or less trouble with flue sheets working up on account of frequently working on the flues, causing the flue sheets to crack across the top of the flange of the sheet.

WIDTH OF BRIDGE in the front tube sheet varies from 1/2 to 15-16 in.; 3/4 in. is used by the majority of members. Width of bridge in the back tube sheet varies from 11-16 to 15-16 in.; 3/4 in. is used by the majority of the members.

FLUE SETTING.—Two members advise that they had tried soft iron ferrules with very little success. One member advises that they had a limited experience trying to set flues in the back flue sheet without any coppers, but found that it did not work satisfactorily, and that they are now experimenting with a combined copper and iron ferrule, but have not had these under test long enough to make any report. One member advises that they use soft iron shims on the front flues to avoid excessive expanding.

SETTING OF FLUES IN THE FRONT TUBE SHEET.—The consensus of opinion of the roads reporting is that tubes should be rolled in the front tube sheet without any ferrules, and 10% of the flues, equally distributed, should be beaded with a beading tool.

TUBE SETTING IN BACK SHEET.—Figs. 28, 29 and 30 show the practice followed out by some of the members in setting the tubes, which are giving good results. Fig. 31 shows application, maintenance and removal of flues in locomotive boilers as used by three members. Tube setting of this kind gives a large bridge, good circulation of water at the back tube sheet and at the same time the inside of the flue is reduced at the end so that any cinders which will pass through the swaged end will not clog the flues. The instructions in connection with this plate are as follows:

PREPARING FLUE SHEETS.—Holes in new firebox flue sheet shall be 1 7/8 in. diameter. Holes in new smokebox flue sheet shall be 2 1-32 in. diameter. Holes in old flue sheet more than 1-32 in. out of round must be reamed, reamer A, fig. 31. Inside and outside edges of flue holes in both sheets must be slightly rounded to remove sharp edges.

TABULAR STATEMENT OF FLUE Setting Method.—

 Prosser expander.

Fig. 29.—Method of Setting Flues in Flue Sheet.

Flue sheet holes (A, fig. 30).—Care should be taken that holes in flue sheet are true, smooth and free from burrs and sharp edges. It is desirable that the flue hole have a fillet especially on the water side, of about 1-32 in. radius. A sharp edge around the hole often cuts the ferrule in two, even cutting into the flue. The diameter of the flue hole should be the same as outside diameter of flue plus 1-32 in.

Copper ferrule (B).—For New York this should not be far different from no. 16 b.w.g. In old flue sheets when the flue

holes are large it is desirable to use enough heavier ferrules to bring the internal diameter of ferrule when expanded into flue sheet to 1/8 in. less than flue diameter. The ferrule should be set into flue hole flush with fireside and expanded into place with Prosser expander (C).

Swaging Flue (D).—Great care should be taken to give the swage the right length and to have it terminate in as abrupt a shoulder as possible. The flue, after it is swaged, should be annealed and the scale removed from the portion entering the sheet. Grinding this scale off by machine is desirable, but in the absence of a grinder the removal of the scale with a file will answer. The flue when driven into the sheet (E) should extend 3-16 in. through the sheet on the fire side.

Rollings (F).—The front end of the flues having been shimmed, when necessary, both the back and front ends are rolled with the dudgeon or other suitable roller, with proper appliances they may be safely and economically rolled by air; the rolling of the back ends must be done by an experienced boilermaker, and the motor must not be larger than a Thor no. 22 or its equivalent.

Beading (G).—This may now be done with a beading tool in an air hammer. Do as little hammering with the beading tool as possible, and do not work bead to a feather edge, but leave as much metal as possible for future caulking.

Expanding (H).—Particular stress should be placed upon this, the most important step in the flue-setting process. Care should be taken that the flue shoulder when heavily expanded bears snugly and firmly against the flue sheet. Hammer not to exceed 4 lbs. after prossering the front ends then bead a sufficient number for safety which finishes the flue setting.

Back ends of flues or safe ends when used in back flue sheet must be cut off square in pipe machine and burr removed by reamer.

Wheel-flue cutters must not be used on account of leaving a heavy burr which splits when beading over.

Air motor and roller are only to be used on initial setting. In reworking flues, the Prosser expander only is to be used, and rollers must not be used, as they force the

bead away from the sheet.

Applying Copper Ferrules.—Copper ferrules 1 3/4 in. inside diameter, 1/2 in. long, .095 in. in thickness shall be used in firebox flue sheet only. Ferrules shall be secured in place with straight expander, B, fig. 31, taking care that shoulder of expander is tight against flue sheet, which shall bring edge of ferrule 1-32 in. from fire side of sheet.

Preparing Flues.—Flue safe ends should be 5 ins. long, except that new iron flues shall have safe ends 4 ins. long, and when

shall be placed in back flue sheet with a these flues are first removed the 4 in. ends will be cut off completely and 6 in. ends applied, after which 5 in. ends should be used. Flues shall be swaged as at D, to 1 11-16 ins. outside diameter by 3 ins. long, including taper at firebox end, for new work; for old work, just enough to enter the copper ferrule. All scale must be removed from swaged ends of flues before application. Smokebox end of flues shall not be more than 1-32 in. less in diameter than holes in the smokebox flue sheet. If necessary, liners may be used.

Fastening of Flue in Flue Sheet.—Flues

beading tool shall be used to bring beads tight to sheet.

Sectional expanders and beading tools must be kept standard by frequently comparing with standard gauges. Any beading tool not conforming to gauge must be sent to principal shop for repairs; these tools must not be repaired at any other shop.

All shops and engine houses must be equipped with standard gauges. All gauges will be made where master gauges are kept.

To remove flues, use flue cutter, P, for the front end, cutting off flues as close to the front flue sheet as possible. Back ends should be split as little as possible, so

surging when making quick stops.

Your committee has no recommendation to make in regard to the use of baffle plates.

Seventeen members deliver feed water to boiler in the first course on the horizontal centre line. The distance from the front flue sheet varies; the minimum distance is 22 ins. and the maximum 6 ft. Five members advise that they deliver feed water to the boiler through the top as well as from the side. One of these members advises that they have never been able to find any particular improvement which the top check has over the side check. Two of these members prefer the water to be fed into the boiler from the top. Boilers having the checks on top of the boiler have a pan shape deflector under the check valve which catches the water and prevents any direct stream of water falling on the top of flues. One member advises that they deliver the feed water in the first course on the horizontal centre line and use a deflector plate placed a short distance away from the boiler course. This is to direct the water to the bottom without striking the tubes. Four members have an attachment on the inside of the injector check to deliver water upward away from the tubes. One member advises that in addition to circulating water from the horizontal line of the boiler they have some locomotives with the delivery pipe passing through the back head, extending from 3 to 6 ft. from the front tube sheet, and the end of the pipe set to deliver water towards the side of the shell; the end of the pipe is submerged. Your committee has no recommendation to make in regard to any particular location where the water is to be delivered to the boiler, as any of the above arrangements seem to give entire satisfaction.

AUXILIARY DOME OR MANHOLE
Cover to Facilitate Interior Inspection of Boiler.—One member advises that they provide an auxiliary dome, or manhole, for interior inspection of boiler. The size of manhole is 15 ins. in diameter, located a short distance ahead of the back flue sheet.

Fig. 30.—Method of Setting Flues in Flue Sheet.

bar, E, and project $\frac{1}{4}$ in. through the sheet. Gauge, F, shall be used in checking location of flues. Flues shall then be fastened at firebox end with straight sectional expander, G. While flue is being fastened it may be held in place at front end, using bar, E. Straight sectional expander shall be checked with master gauge, H, fig. 8. Before using sectional expander, and in order to obtain exactly the proper length of flue for beading, flues may be rolled lightly to fasten them in sheet with roller expander, O. After all flues are fastened they shall be flared at firebox end, using flaring tool, I, and long stroke riveting hammer.

Expanding Flues.—Flues at firebox end shall be expanded with sectional expander, J, and long stroke riveting hammer. Roller expander must not be used. Pin shall be driven into expander until flue is solid against flue sheet. This must be done three times, expander to be slightly turned before each operation. The expanding shall be performed as follows:—First, two vertical rows, from centre to top of sheet. Second, same rows from centre to bottom. Third, the two horizontal centre rows from centre to right. Fourth, same rows from centre to left. Fifth, all remaining flues. All flues must be carefully inspected after expanding to assure that recess in each flue is the full depth of recess in expander and even all around the flue. Sectional expander, J, to be checked with master gauge, K.

Beading Flues.—Flues in firebox flue sheet shall be beaded with standard beading tool, L, and short stroke riveting hammer. Care must be taken so that nothing enters between head and flue sheet. Beading tool must conform accurately to master gauge, M, at all times. Smokebox end of flues shall be tightened with flaring tool, N, before rolling takes place. All flues in smokebox end shall be rolled with roller expander, O.

Flue Maintenance.—The firebox end of flues in service must be expanded at regular intervals with sectional expander, J. This work shall be done when boiler is empty and all flues thoroughly cleaned out. Flue leaks in the firebox must be stopped with the sectional expander and not with roller expander nor beading tool. If beads are slightly away from flue sheet, standard

that it will not be necessary to use safe ends longer than 5 ins.

SETTING OF SUPERHEATER TUBES.

Front tube sheet. Only eight members have had any experience with setting large superheater tubes. The practice followed out mostly is that the tube is rolled and beaded as shown on fig. 32, and this type of setting is suggested by your committee for further consideration.

BACK TUBE SHEET.—Eight members advise that they use copper ferrules; one member who omitted copper ferrules is having good success with this method.

The consensus of opinion of the roads

Fig. 31.—Tools Used in Preparation of Flue Sheet.

reporting is that the type of setting shown on fig. 32 is preferred, and your committee suggests this setting, except that the copper ferrules should be no. 13, .095 in. thick, instead of no. 16, .065 in. thick.

CIRCULATION OF WATER.—Your committee took up the question with the members whether any of them employed any special feature of design to facilitate circulation of water. We find that no member has any special design for this purpose. Four members advise that they use baffle plates in the boiler shells, located ahead and rear of the dome. This is to prevent, as much as possible, the water from

This is submitted for your consideration, as it makes inspection of the interior of the boiler possible without removing the throttle standpipe and dry pipe. One member is using larger dome in new construction to accomplish the same result.

SURFACE BLOW OFF COCKS.—Three members use surface blow off cocks. One of these members has discontinued the use of same, the other two members using surface blow off cocks have located them on a line with the second gauge cock, and advise that they get good results from the use of both the blow off cock and surface blow off cocks by getting rid of the mud

and scale by blowing the boilers regularly.

LOCATION OF BLOW OFF COCKS.—We find there is no uniform practice in regard to the location of blow off cocks. Two members advise that they use four or more, which are located one in the throat sheet, one or more in the side water legs, depending upon the size of the boiler, one in the belly of the boiler near the throat sheet, and in some cases additional blow off cocks in the belly of the boiler at the centre. One of these members advises it has been found by using a sufficient number of blow off cocks and insisting upon their use at regular intervals the amount of boiler washing has been cut down considerably, as well as giving greater life to the flues. Another member advises that they have been ex-

For the consideration of the members of the Association in this report you will find a tabulated statement showing the different sizes of fireboxes, as well as a number of tubes and size of cylinders that the differ-

ent members reported as giving good service for passenger, freight and switching service.

Additional illustrations are given on pages 548 and 549.

Suggestions and Deductions From Steel Passenger Cars.

By A. Copony, Chief Draughtsman, Car Department, G. T. R., Montreal.

The first portion of this article was given in Canadian Railway and Marine World for October.

COST AND WEIGHT.

The cost of any type of steel car will depend on the type of car, the seating capacity, the inside finish, the equipment, insulation, etc., but we must not forget that the cost of a car built of a certain material, in this case steel, will be in a sense direct proportionate to the weight of the car, and for this reason the selection of the type of the car will be of utmost importance. The selection of an economical type of section which combines the greatest strength, not forgetting shear, with the least area, will naturally keep the weight of the car body within certain desirable limits.

The avoidance of a great number of differently pressed parts will also have a definite bearing on the price of the car, and if we have to consider that a light car (avoiding, of course, extremes which would impair the life of the car for length of service), is in two ways desirable from the railway standpoint, the first being initial cost and the second and most important point being that the hauling expenses per car will diminish, despite the fact that the traction force per ton will increase for light weight cars. For this reason we are showing in the diagram that the weight of a car is also of interest to the motive power department. In the tables giving the details of steel passenger cars a column shows the dead weight of car per passenger, and although this value is fluctuating we

railway car amounts to from 1,200 to 1,700 lbs., and admitting the points of superior comfort and safety to be balanced by the poor roadbed and the weight of the power plant of automobiles we must ask the question: "Is there no possibility of getting below the automobile limits of dead weight per passenger, and is this reduction possible without sacrificing safety and comfort?" The possibility to obtain better results is certainly within our grasp and it is a matter of application to attain better results with the superior material we employ in the construction of the car today compared to the inferior bulky material of the wooden cars of yesterday.

DRAFT RESISTANCE.

Until quite recently it has always been our aim to meet the natural demand for faster and larger trains, with an increase in power and speed developed by our locomotives, until we have pretty nearly reached the limit by the natural limitations of the grate surface. The next step to take to prepare for further demands for further increase of speed or length of train, would naturally be the reduction of draft resistance per ton of dead weight.

Draft resistances are made up in the main of air or skin resistance, friction resistance in the bearings, flange friction resistances, rolling friction resistances between wheels and rails, power losses caused by unbalanced wheels, and last, but decidedly not least, slip.

Flange friction resistances are to a certain extent avoidable, rolling friction resistances between wheels and rails are un-

Fig. 32.—Method of Setting Superheater Tubes.

perimenting with the blow off system, by which one blow off cock in the throat sheet draws mud from along the mud ring and the barrel of the boiler by means of slotted pipes, and this has worked out satisfactorily in service. Some of the members favor locating the blow off cock right above the mud ring and another locates them about one foot up from the mud ring.

Your committee has no recommendation to make in regard to the number or where the blow off cocks should be located. The number and location of blow off cocks depends on the quality of water used.

FILLING OF BOILERS.—One member advises that they have had a number of side sheets cracked by filling through blow off cocks located in the water legs. They did not state whether they used cold or warm water. They are now filling through the blow off cocks located in the barrel of the boiler. Another member advises that they have had considerable experience with sheets cracking from the filling through blow off cocks with cold water. They now fill boilers through injectors when using cold water.

It seems to be the consensus of opinion of the members that it is most advisable to fill the boilers from the blow off cocks in the water leg, providing warm water is used. If cold water is used it should be filled through the valve on top of the boiler or through the injectors, and your committee recommends that this practice be followed out.

WASHING OUT AND FILLING UP OF Locomotive Boilers.—The reports regarding washing out and filling up of locomotive boilers and the use of blow off cocks were so at variance with what is generally considered good practice, your committee would strongly recommend the appointment of a special committee to report thereon.

LOCATION OF FITTINGS.—Gauge cocks and lower column cock should be located so that they will not come directly back of gusset plate or stay angles, and not to be located directly over arch tubes.

Figs. 3 and 4 show the type of boiler used by one of the members from an anthracite road, which is submitted for your consideration.

Passenger Locomotives.—Dimensions of Fireboxes Reported as Giving Good Service.

will have to admit that it ought to be within reasonable limits for certain classes of cars.

In looking back upon the history of transportation we find that a horse drawn carriage will weigh about 1,500 to 2,500 lbs., seating at an average four passengers and a driver, which brings the dead weight per passenger from 300 to 500 lbs. This vehicle will move at a speed of 6 to 8 miles an hour over a roadbed not comparable to the worst kind of railway track. An automobile, weighing 5 tons, seating 7 passengers, and containing its own power plant, moving with almost the same average speed as a passenger train over a far inferior roadbed compared to a track, will bring the dead weight per passenger to 1,428 lbs. The dead weight per passenger of a steel

avoidable and a reduction of this resistance cannot as yet be considered possible, although there are some products on the market that claim to overcome this trouble of flange friction resistances to a certain extent. The power losses by unbalanced wheels, although small, could be avoided and the effect of unbalanced wheels on tires shall be here entirely neglected.

Next in importance is the question of skin friction or air resistance. Leaving all theories of wave lines for passenger trains unconsidered, the following theory is advanced by scientists: A smooth surface offers more resistance, in form of skin friction, to an air current than a comparatively rough surface, because air is held in the cavities of the rough surface for a certain length of time, thus only permitting

the high spots of the surface to hit the passing air, and as the friction between air and air is less than between air and a smooth solid body the resistance of rough surfaces is smaller. It would be worth while to put this theory to a practical test on railways, but it is a question if it could be used to advantage, since a rough surface offers better opportunities for dust and soot to settle and cling to the car, and is harder to dislodge in the cleaning yards, than from smooth surfaces, some advantages could be derived in the general appearance of the car, since it is impossible to prevent slight buckles with even the very best of care and the use of so-called "patent level" material, which are shown up by a glossy coat of varnish, which defect could be effectively covered by the use of a dull finished surface.

Bearing friction, one of the main factors of train resistance, is one of the points that was apparently neglected until quite recently. We must concede, of course, that a lot of improvements have been made in the use of antifriction metals, but the main issue, the conversion of gliding friction into rolling friction, which would signify a con-

ceded that the results derived from roller bearings were favorable when the cars were run at low speed, the draft resistance at higher speeds was increasing rapidly and exceeded in some cases that of gliding friction bearings. As to these objections much can be said that will put the roller bearing in a more favorable light for consideration.

Heat treatment of special high grades of steel, and the use of vanadium in the manufacture of steel, has made the rollers tougher and harder, so that they can be subjected to higher pressures with impunity.

End thrust bearings were designed to take care of the end thrust of axles, and it can be only a question of time and experiments until a roller bearing for cars will be evolved that will meet all requirements, so that the saving in drawbar pull will more than counterbalance the extra expense of roller bearings.

Experiments were made by Prof. W. P. Graham, of Syracuse university, in 1905, in which the merits of roller bearings were clearly demonstrated by the power consumption of electric street cars equipped with roller bearings and without roller

in all those places where the power is limited has been proven by the use of these roller bearings in harvesting machinery, and this is still more surprising since we know that the working conditions of agricultural machinery are worse than those of a truck in motion.

One other factor in making up our drawbar resistance is slip. The percentage of slip is varying and increases with the difference in diameters of mated wheels on one axle. Although all our railway shops pay special attention to this fact, when they are turning new or repaired passenger equipment out of their shops, it is impossible to maintain equal diameters for any reasonable length of time, since the difference in finish of cut, material, carbon percentage, hardness, etc., are different in every wheel and in every brakeshoe, so that the best diameter balance will be upset in the shortest time. To investigate the amount of slip in actual service and the increase in drawbar pull necessitated by these gliding friction losses at high pressure would be highly interesting, the more so since the drawbar pull alone is only one factor that is mentioned here. The wear on tires and rails must be excessive, since the pressure per square inch of contact between wheel and rail is very high.

To prove this assertion the following figures, based on a theoretical modulus of gliding friction of 0.75 between steel and steel for exceptionally high pressures per square inch and without lubrication, are set down.

The assumption is a train, consisting of 6 cars of 60 tons weight each, the diameter of wheels differing $\frac{1}{4}$ in., and the train being carried a distance of one mile. The foot pounds of drawbar pull to move a train at a speed of 45 miles an hour, with a pull of 17 lbs. per ton, is equal to:

$17 \times 6 \times 60 \times 5280 = 32,313,600$ ft. lbs.
Revolutions of axle with a standard 36 in. wheel per mile=

$\frac{5280}{3.1415 \times 3} = 559$ revolutions per mile.

Slip per revolution in inches = $0.25 \times 3.14159 = 0.785$ inches.

Total slip in ft. per mile = $\frac{0.785 \times 550}{12} = 36.56$ ft.

Friction loss in ft. lbs. = $36.56 \times 6 \times 120000 \times 0.75$

$= 9,875,000$ with load of train.

The friction loss in ft. lbs. with load of train is, therefore, equal to 30.5% of the total drawbar pull.

These figures are, of course, only based on theoretical assumptions, and are used to point a way to investigate one of our heaviest power losses. There is no doubt that the percentage of this resistance will change materially with the speed of trains and weight of cars, and further we maintain that the bulk of flange wear is caused by this difference in diameter of tires, since there is always a lot of play between journal box and journal brass, which permits a constant twisting of the axle, caused by the afore-mentioned forces, which results in the tendency to climbing of flange on rail.

The trouble of slip could be overcome by the application of individual wheels to the truck, or simpler still by the use of sleeve shafts. It would be going too far to advocate the application of this principle, for which a practical solution will have to be found to our present day trucks, but the time will come some day, when the reduction of draft resistance will become imperative, and if we could find means of reducing our draft resistance some 50 to 75% it would mean that we could haul

Freight Locomotives.—Dimensions of Fireboxes Reported as Giving Good Service.

siderable reduction in draft resistance, has been woefully neglected. I am sure that this neglect, or rather the lack of interest shown in taking this matter up for high class passenger rolling stock has had many reasons that could serve as an excuse. Excluding ball bearings entirely, the reasons held against the application of roller bearings were the high pressures to which rollers were subjected to, the complication of design and the high initial cost of the bearings, the possibility of an absolute locking of axle, if one of the rollers should break, and the danger resulting therefrom to the passengers, the difficulty of repairs, the end thrust that has to be taken care of, and a lot of other objections of lesser importance.

Several leading railways of the country carried on experiments in years gone by, but the result was in many instances not encouraging. The pressures on the rollers, made of impure and not properly hardened steel, were excessive, the rollers broke, the wear was excessive where pressures had exceeded a certain limit, so that the application of roller bearings was confined to light rolling stock only, and although it

bearings. These experiments showed a saving of power of about 50% by the use of roller bearings, compared to gliding friction bearings of the old type. As the testing facilities must have been of a crude kind, no definite information was given regarding the power consumption per ton mile at varying speeds, the speeds being in every case below 25 miles an hour, so that not many deductions can be drawn from this test. No special test was made to show why the resistance of roller bearings should increase more rapidly after attaining a certain speed limit than gliding friction bearings, and although we can surmise that this is caused by the crowding of rollers, which thus set up a gliding friction among themselves, taking place at double the circumferential speed of one roller, we have no confirmation by test. The use of, and experiments with, roller cages would be advisable, because they are designed to prevent such a state of affairs. Further provisions will have to be made to prevent accidents in case of breakage of rollers, and special care will have to be taken to make the journal as dust tight as possible. That the roller bearing has been a success

Canadian Pacific Railway Co.'s Annual Report and Meeting.

Following is the 31st annual report, addressed to shareholders over the signature of the President, Sir Thos. G. Shaughnessy:—

The accounts for the year ended June 30 show the following results:—

Gross earnings	\$123,319,541.23
Working expenses	80,021,298.40
Net earnings	\$ 43,298,242.83
Net earnings of steamships in excess of amount included in monthly reports	1,104,448.79
	\$ 44,402,691.62
Deduct fixed charges	10,524,937.49
Surplus	\$ 33,877,754.13
Deduct amount transferred to steamship replacement account	\$1,000,000.00
Contribution to Pension Fund	125,000.00
	1,125,000.00

\$ 32,752,754.13

From this there has been charged a half-yearly dividend on preference stock of 2%, paid April 1	\$1,258,333.32
And three quarterly dividends on ordinary stock of 1% each, paid Jan 2, April 1 and June 29	\$9,450,000.00
	\$ 10,708,333.32

\$22,044,420.81

From this there has been declared a second half-yearly dividend on preference stock, payable Oct. 1	\$1,333,901.94
And a fourth quarterly dividend on ordinary stock of 1% payable Oct. 1	\$3,150,000.00
	\$ 4,483,901.94

Leaving a net surplus for the year

In addition to the above dividends on ordinary stock 3% was paid from special income.

DETAILS OF SPECIAL INCOME FOR YEAR.

Balance at June 30, 1911

Interest on cash proceeds and on deferred payments for land sold

Interest on deposits and loans

Interest on C.P.R. 1st mortgage bonds acquired

Interest from Minneapolis, St. Paul & Sault Ste. Marie Ry. bonds

Interest from Duluth, South Shore & Atlantic Ry. bonds

Interest from Mineral Range Ry. bonds

Interest from Toronto, Hamilton & Buffalo Ry. bonds

Interest from Kingston & Pembroke Ry. bonds

Interest from Dominion Government bonds

Interest from Ontario Government bonds

Interest from British consols

Interest from Montreal & Atlantic Ry. bonds, and on other securities

Dividends on St. John Bridge & Ry. Extension Co. stock

Dividends on Dominion Express stock

Dividends on M. St. P. & S.S.M. Ry. common stock

Dividends on M. St. P. & S.S.M. Ry. preferred stock

Dividends on Alberta Ry. & Irrigation Co. stock

Dividend on West Kootenay Power & Light Co. common stock

Dividends on W. K. P. & L. Co. preferred stock

Less—Payments to shareholders in dividends: Sept. 30, 1911: Jan. 2, Apr. 1 and June 29, 1912

From this a dividend has been declared, payable Oct. 1

Leaving net surplus carried forward

The working expenses were 64.89% of the gross earnings, and the net earnings 35.11%, compared with 64.77 and 35.23% respectively in 1911.

Four per cent. consolidated debenture stock for £2,252,516 was created and sold, and of the proceeds £1,481,592 was applied

to the construction of branch lines; £300,000 for acquisition of steamships for Pacific coast service; £5,000 to acquire a like amount of your company's first mortgage 5% bonds; and the balance £465,924 was devoted to the acquisition of the bonds of other railway companies whose lines constitute a portion of your system, the interest of which had been guaranteed by your company. Four per cent. preference stock for £1,976,390 was created and sold, the proceeds being used to meet capital expenditures.

Your guarantee of interest was endorsed on 4% consolidated bonds of the M. St. P. & S.S.M.R. Co. for \$1,520,000, issued and sold to cover the cost of 76 miles of railway added to that company's system.

During the year 669,639 acres of agricultural land were sold for \$10,710,143, an average of \$15.99 an acre. Included in this area were 3,270 acres of irrigated land, which brought \$44.25 an acre, so that the average price of the balance was \$15.85 an acre.

Your directors consider it desirable to extend the following branch lines of railway in Manitoba, Saskatchewan and Alberta, and will ask you to sanction the issue of the requisite amount of 4% consolidated debenture stock to meet the expenditures, viz.:—Boissevain to Lauder, 37 miles; Weyburn-Lethbridge branch, 125 miles; Kerrobert northeasterly branch, 11 miles; Wilkie-Anglia branch, 4 miles; Swift Current northwesterly branch, 80 miles; Suffield southwesterly branch, 55 miles.

There will be submitted for your consideration a lease of the Kingston and Pembroke Ry., extending from Renfrew, on the company's main line west of Ottawa, to Kingston, and from Godfrey to Zanesville mine, Ont., 107.5 miles; a lease of the Alberta Central Ry., extending from Red Deer to Rocky Mountain House, Alta., 65 miles; an agreement with the St. Marys and Western Ontario Ry. Co. cancelling existing arrangements and substituting a lease of its property for 999 years at a rental equivalent to 4% per annum on bonds issued or to be issued by that company with your consent to an amount not exceeding \$25,000 a mile of its railway; and a deed of conveyance of the Cap de la Madeleine Ry., about 4 miles, connecting your railway near Three Rivers, Que., with Cap de la Madeleine, on the St. Lawrence river, and with the Wayagamack Pulp and Paper Co.'s works.

A lease from the New Brunswick government of the New Brunswick Coal and Ry. Co. for 999 years at a rental of 50% of the net earnings, as defined in the proposed lease, will be submitted for your sanction. This railway extends from the vicinity of Minto to a junction with the Intercolonial Ry., near Norton, N.B., approximately 58 miles, and will form a portion of a connection between your railway and a coal mine in New Brunswick, now in process of development.

For the purpose of securing a shorter and more expeditious route between Quebec and points in New England, served by your friendly connection the Boston and Maine Rd., your directors thought it advisable to lease the Quebec Central Ry., forming the connection between Sherbrooke and Levis, together with branch lines from Beauce Jct. to St. Sabine, and from Tring to Megantic, Que., a total of about 253.5 miles, at a rental based upon the interest on the outstanding 1st, 2nd and 3rd mortgage bonds of the Q.C.R. Co. and a dividend on the outstanding capital stock of that company at 4% per annum for four years

from July 1, 1912, and thereafter at 5% per annum, and you will be asked to confirm and sanction the lease.

The Shuswap and Okanagan Ry., from Sicamous Jct., on your main line in British Columbia, to the head of Okanagan lake, 51 miles, was leased to your company on its completion in 1892 for 25 years, and it was a condition that the company should pay by way of rental 40% of the gross earnings of the line in quarterly amounts. The interest on the bonds issued by the S. & O. Ry. Co. for construction, amounting to £10,000 per annum, was unconditionally guaranteed by the province of British Columbia. Until within the last two years the rental was insufficient to meet the annual interest charge, with the result that the province had a deferred claim against the S. & O. R. Co. for the deficiency in interest amounting to about £80,000 at the end of last fiscal year. As the principal of the bonds will mature July 1, 1915, and it is manifestly desirable that your company should retain possession of the line, a lease of the property for 999 years has been arranged and will be submitted for your approval. The rental to be paid by your company is an amount equivalent to 4% per annum on the outstanding bonds of the company and on any that may hereafter be issued with your consent. Upon being subrogated in the rights of the province your company has undertaken to make good to the province the deficiency in interest, to which reference has been made.

Your land in British Columbia secured by the construction of the Columbia and Western and British Columbia Southern Rys., had, by lapse of time and judgment of the court, become subject to taxation. Of the lands in these grants 434,696 acres were sold during the past 12 years at an average price of \$1.77 an acre. As these constituted the most accessible of the lands, and the remainder were so situated that they would necessarily be very slow of sale, your directors decided after negotiations covering a considerable period to reconvey to the province the unsold portion of these two land grants, excepting an area of 543,496 acres, reserved by the company to meet its timber and tie requirements, at the price of 40c an acre. This will enable the provincial authorities to encourage settlers to take up on very easy terms such of the lands as may be of use, and the company will be relieved from the cost of administration and from the payment of rather heavy annual taxes. Your directors are of opinion that the transaction, which was not completed until after the close of the fiscal year, will prove advantageous to both the province and your company, and they hope that their action will meet with your approval.

The Georgian Bay and Seaboard Ry., recently built under the auspices of your company between Victoria Harbor, on Georgian Bay, and Bethany, Ont., to provide a shorter and more economical lake and rail route between western Canada and the Atlantic seaboard, has proved more expensive than was anticipated, due to the character of the line that it was finally determined to construct and to other conditions. The power conferred by Parliament on the G.B. & S. Ry. Co. to issue bonds for the purpose of its undertaking was originally limited to \$30,000 a mile, but at the last session this was increased to \$55,000 a mile, and your directors will ask your authority to enter into a supplementary agreement with the G.B. & S. Ry. Co. to increase the limit of that company's bond issue, upon which this company has, by virtue of the lease approved Oct. 3, 1906, agreed to pay interest by way of

rental, from \$30,000 to an amount not exceeding \$55,000 a mile of railway.

Instead of continuing the double track from Glen Tay to Agincourt, on the Ontario and Quebec Ry. between Montreal and Toronto, your directors have decided, if you approve, to secure a line between these two points that will serve the territory further south, and will reach several important towns on the north shore of Lake Ontario. An agreement has, therefore, been made with the Campbellford, Lake Ontario and Western Ry. Co. for the construction, under your company's supervision and control, of that company's railway, 184 miles, between Glen Tay and Agincourt, and for the lease of the railway when completed to your company for 999 years, at a rental equivalent to 4% per annum on the bonds of the C.L.O. & W. Ry. Co., issued with your consent.

Your present route between points in the Kootenay and Boundary Creek districts, B.C., and the Pacific coast is long and expensive, and the best means of securing a more direct route has engaged the attention of your directors for some time past. The Kettle Valley Ry. Co., having a Dominion charter, covering the territory between Midway, the terminus of your Boundary Creek line, and Merritt, on your Nicola line, undertook to build the railway between these points, under the advice and to the satisfaction of your directors, upon condition that your company would lease the line, approximately 270 miles, and the branch line along the north fork of the Kettle river, 24 miles, as soon as the K.V. Ry. Co. is competent to make a lease, paying by way of rental the interest at 4% per annum on the bonds of the K.V. Ry. Co., issued with your consent, any subsidy received from the Dominion or Provincial Government, or from any other source, to be applied on an agreed basis towards the cost of the construction of the railway and a corresponding reduction in the amount of bonds to be issued. This line will give you access to a large and important section of the province in which development should quickly follow railway facilities. Your directors will suggest that they be clothed with power to make an agreement of lease when the requisite legal formalities have been complied with.

The amounts appropriated for new works, exclusive of railway construction, were abnormally large, in the year under review. For the enlargement of terminals, additional buildings, shops, second tracks, sidings and improvements of every variety calculated to improve the efficiency of your railway system, and to facilitate the movement of your large and increasing traffic \$30,000,000 was authorized to be expended and orders for locomotives and cars, representing an expenditure of \$25,750,000, were placed. Many of these works cannot be completed within the season with the limited amount of labor available, but your directors are sparing no effort to meet the convenience of the public and to strengthen your own position. Canadian manufacturers of freight cars are very much behind in their deliveries, but they promise to do better, and there is little doubt that all of the equipment ordered abroad will be forwarded according to contract.

In 1905, when your company acquired the Esquimalt and Nanaimo Ry., you also purchased the unsold lands on Vancouver Island belonging to that company, about 1,400,000 acres, for \$1,330,000. Thus far 250,000 acres have been sold, yielding \$3,364,000, and the remaining area is of great value, although some portions of it are so situated that they cannot well be utilized. There was the possibility that

these lands might be subject to taxation if segregated from the Esquimalt and Nanaimo Ry., and, therefore, they have never been taken into your accounts, but an agreement about taxes has been made with the province, and hereafter the figures relating to them will appear in your annual statements.

At a special general meeting of shareholders, May 11, 1892, a resolution was adopted authorizing the company to create and issue from time to time consolidated debenture stock payable in sterling money of Great Britain and bearing interest not exceeding 4% per annum for the purpose of satisfying or acquiring mortgage bonds of any other railway company, the principal or interest of which the company shall have already guaranteed. The Dominion Atlantic Ry. Co., whose railway you have leased, provided its money requirements by an issue of three classes of debenture stock, upon which your company has guaranteed the payment of the annual interest as a consideration for the lease of the property. It is quite likely that in the future it will be found desirable to acquire a portion, or all, of this debenture stock by an issue of your own 4% consolidated debenture stock, and, in order to comply strictly with the provisions of the act of 1892, it will be necessary to have an issue of consolidated debenture stock for that purpose approved by the shareholders at the special general meeting duly called for the purpose immediately after the annual general meeting.

CONDENSED BALANCE SHEET.

Sir Thos. Shaughnessy, in submitting the report for approval, said:—

The report covers the most prosperous year in the company's history, the gross operating income having exceeded \$123,000,000, and the net balance, after providing for fixed charges and making the usual deductions, being \$33,752,000.

Regarding the crops in Western Canada, there is the prospect that they will be larger than estimated and of particularly good quality. The weather conditions and shortage of farm help interfered with threshing, and the movement of grain to the markets will crowd transportation facilities towards the close of lake navigation. We hope to escape anything in the nature of serious congestion, and have reason to expect that the grain traffic and the general business of the company during next year will be at least as large as it was last.

A second main line is being laid between Regina and Chaplin, Sask., and by the end of 1914 the double track should be completed and in use between Fort William and Calgary, 1,256 miles. The extension of the second track from Calgary to Revelstoke, where the line crosses the mountain ranges, will require careful investigation and study before a plan of operation can be determined, but a double track through this territory is urgently required to meet the demands of traffic, and no time will be lost in the commencement and prosecution of the work. Among other important works in hand are a second main line between Farnham and Montreal junction, including the replacement of the bridge across the St. Lawrence river at Lachine, by a double track structure designed for the heaviest train loads; a large sorting yard for freight trains at Montreal junction; the Windsor street passenger terminal at Montreal, that will be finished about the end of the year and will provide more than twice the present station and yard accommodation; the warehouses and yards for local traffic that are being constructed on the government house and adjoining properties acquired in Toronto; the additional freight yards at Transcona, five miles east of Winnipeg, where about 400 acres are being covered with tracks and buildings to supplement the existing Winnipeg yards, among the largest in the world, but insufficient to accommodate the traffic at that point; the large locomotive and car shops at Ogden, near Calgary, which will be ready for use in the course of the next three or four months; and the new station, overhead bridges and wharf facilities at Vancouver that it will take some time to complete. Innumerable other works of lesser importance, but involving a large expenditure, all designed to facilitate traffic and to accommodate the public, have been executed or are in process of execution, and there would appear to be no limit to the demands of this kind that it will be necessary to meet if our business continues to expand as it has in the past.

The most prudent and effective method of providing money for all these purposes has the close and constant attention of your directors and they believe that in the future, as in the past, the best interests of the

company and of Canada will be served by giving an opportunity to the shareholders to furnish the additional capital on a basis that makes the investment reasonably attractive. With the 4% consolidated debenture stock that your Directors are now authorized to issue and sell, the proceeds to be used in retiring outstanding bonds carrying a higher rate of interest, and in meeting expenditures for additional railway mileage heretofore constructed or acquired, and the consolidated debenture stock that may be issued in respect of the proposed construction or acquisition of the several railway lines described in the report, there will be approximately \$90,000,000 4% consolidated debenture stock, in excess of all heretofore disposed of, that the company will be authorized to issue and sell. Instead of going to the market with any considerable portion of this amount, your directors recommend that you make use of the authority conferred upon you by Parliament to issue ordinary shares of capital stock in lieu of consolidated debenture stock, and that you increase your ordinary share capital from \$200,000,000 to \$260,000,000 to be offered to shareholders at \$175 for each \$100 share, at a time and on terms of payment to be fixed by your directors. The proceeds to the amount of \$60,000,000 will be used to meet expenditures for which proceeds of consolidated debenture stock would otherwise have been utilized, including the satisfaction and cancellation of all the company's outstanding 5% first mortgage bonds, amounting to \$33,766,000, on or before their maturity, July 1, 1915, and the balance will be devoted to such additions and improvements to the property, properly chargeable to capital account, as are in the opinion of your directors necessary from time to time. By this means the company will be getting money on its ordinary share capital at a low rate of interest, taking the present dividend rate as a basis, its bond and debenture debt will be \$60,000,000 less, its fixed charges will be \$2,400,000 per annum less than they otherwise would have been, and its available funds for the purposes of the undertaking will be increased by \$45,000,000. Your directors will recommend that this amount be supplemented by an appropriation of \$15,000,000 from your accumulated surplus, that might properly be distributed to the shareholders but that will instead be expended on capital account in additions and improvements to your property.

The report was unanimously adopted.

It was resolved, that the construction and equipment of the following branch lines and extensions which have been authorized, be approved:—

An extension northeasterly of the Kerrobert northeasterly branch, 11 miles;

An extension westerly of the Weyburn-Lethbridge branch, 100 miles, and easterly from near Stirling on the A.R. & I. Co.'s line, 25 miles;

An extension southeasterly of the Wilkie-Anglia branch, 4 miles;

An extension northwesterly of the Swift Current northwesterly branch, 80 miles;

A branch from Boissevain westerly to near Launder and known as the Boissevain-Lauder branch, 37 miles;

A branch southwesterly from Suffield, on the main line and known as the Suffield southwesterly branch, 55 miles.

And for such purpose to issue consolidated debenture stock not exceeding £6,000 a mile for the Kerrobert northeasterly branch extension, Wilkie-Anglia branch extension, Swift Current northwesterly branch extension, Boissevain-Lauder branch and Suffield southwesterly branch, and £5,000 a mile for the Weyburn-Lethbridge branch extensions.

Resolutions were also adopted, approving

the lease of the Kingston and Pembroke Ry., for 999 years, at an annual rental equal to the interest payable on the outstanding mortgage debentures, until they have been redeemed, and interest at 4%, payable half yearly upon other securities which the K. & P. Ry. Co. may issue at the request of the lessees, the aggregate securities not to exceed \$10,000 a mile of railway;

Approving the lease of the Alberta Central Ry., for 999 years, at an annual rental equal to the interest payable on all bonds carrying interest not exceeding 4% per annum, payable half yearly, which the lessors may issue at the request of the lessees;

Cancelling the existing lease of the St. Marys and Western Ontario Ry., and approving a new lease for 999 years, at an annual rental equal to the interest payable on all bonds carrying interest not exceeding 4% per annum, which the lessors may issue at the request of the lessees, the aggregate of such bonds outstanding not to exceed \$25,000 a mile of line built or under contract;

Approving the purchase of the Cap de la Madeleine Ry.;

Approving the lease of the New Brunswick Coal and Ry. Co.'s railway, for 999 years, at an annual rental of 50% of the net earnings of the line;

Approving the lease of the Quebec Central Ry. for 999 years, at an annual rental equal to 4% per annum on the outstanding first mortgage debenture stock; interest at 3½% on the second mortgage debenture stock; interest at 5% per annum on the third mortgage bonds; a dividend of 4% per annum on the outstanding capital stock for four years, from July 1, 1912, and thereafter at 5% per annum, and interest on any bonds or debenture stock which the lessors may issue at the request of the lessees;

Authorizing the lease of the Shuswap and Okanagan Ry. for 999 years, at an annual rental equal to the interest payable on the present outstanding bond issue, \$1,250,000, at 4% per annum, and on all bonds carrying interest at 4% per annum which the lessors may issue at the request of the lessees, the aggregate of all such bonds not to exceed \$35,000 a mile of railway built or under contract;

Approving the sale to the British Columbia government of lands of the British Columbia Southern Ry.'s land grant, and the Columbia and Western Ry.'s land grant, at 40c. an acre, reserving 543,496 acres of the B.C. Southern Ry. land grant and all timber on lands covered by timber permits in force at the date of the agreement; releasing the provincial claim for taxes on the B.C. Southern Ry. land grant, and approving payment to the province of amounts advanced for payment of interest on Shuswap and Okanagan Ry. bonds, after crediting amounts received by the province from the company's earnings, the province releasing both companies from all liability to pay any portion of the company's earnings, or interest on the company's bonds; the province also to sell to the company, the Kaslo and Slocan Ry., in consideration of \$25,000, the company to rebuild, maintain and continuously operate same and the province to pay the company a cash subsidy of \$100,000;

Approving a supplementary agreement increasing the bond issue of the Georgian Bay and Seaboard Ry from \$30,000 to \$55,000 a mile;

Approving the lease of the Campbellford, Lake Ontario and Western Ry. for 999 years, at an annual rental equal to the interest payable on all bonds carrying interest not exceeding 4% per annum, which the lessors may issue at the request of the

lessees, the aggregate of such bonds not to exceed \$65,000 a mile of line built or under contract;

Authorizing lease of the Kettle Valley Ry. at an annual rental equal to the interest payable on all bonds bearing interest not exceeding 4% per annum, which the lessors may issue at the request of the lessees, the aggregate of such bonds not to exceed \$50,000 a mile for the Coquihalla branch, and \$40,000 a mile for other lines;

Authorizing the issue of consolidated debenture stock, not exceeding £1,232,500, for the acquirement of the first, second and extension debenture stock of the Dominion Atlantic Ry., which has been leased for 999 years, and

Authorizing the increase of the C.P.R. Co.'s capital stock from \$200,000,000 to \$260,000,000.

The retiring directors, W. D. Matthews, Sir Sandford Fleming, A. R. Creelman and Sir William Whyte, were re-elected.

At a subsequent meeting of the board, Sir Thos. G. Shaughnessy was re-elected President; D. McNicoll, Vice President, and the following were appointed the executive committee:—R. B. Angus, D. McNicoll, Sir Edmund Osler, Sir Thos. Shaughnessy, Lord Strathcona and Sir William Van Horne.

Canadian Ticket Agents' Association's Annual Meeting.

The 26th annual meeting of this association was held at the Chateau Laurier, Ottawa, Ont., Oct. 9.

The Right Honorable R. L. Borden delivered an address of welcome. F. W. Churchill, C.P.R., Collingwood, Ont., replied on behalf of the association.

The President, S. B. Morris, C.P.R., Rodney, Ont., occupied the chair and in his opening address referred among other things to the loss the association had sustained in the death of M. McNarama, G.T.R. agent at Walkerton, Ont., and a past President of the association.

E. de la Hooke, Secretary-Treasurer, read his annual report, the best in the association's history, showing a membership of 218 and there being a balance of \$386.76 on hand.

C. E. Benjamin, General Tourist Agent, C.P.R., Montreal, representing the American Association of Passenger Agents, addressed the meeting and referred to the warm welcome and attention given by the Canadian government to immigrants.

J. A. McKenzie, G.T.R., Woodstock, Ont., reported his attendance as representative of the association at the American Association of General Passenger and Ticket Agents' convention at Seattle, where he was successful in obtaining the appointment of a committee to take up with the Interstate Commercial Commission the question of the granting of free transportation once a year on railways in the United States to members of the association.

A Hilton, General Passenger Agent, St. Louis and San Francisco Rd., was unable to come to Ottawa as representative of the American Association of General Passenger and Ticket Agents, owing to illness.

A letter was read from Barlow Cumberland, a past President, expressing his regret at his inability to be present.

A. E. Duff, District Passenger Agent, G.T.R., Toronto, read a very practical paper in which he dealt with filing tariffs and circulars, displaying advertising matter, public time tables, etc.; newspaper advertising; through ticketing and exchange orders; ticketing children, and soliciting travel.

An amendment to the constitution was

introduced by the President, S. B. Morris, to admit as associate members district travelling or general agents of the passenger departments of Canadian railways and steamship lines and similar officials resident in Canada of any foreign lines. The amendment was defeated.

The following officers were elected for 1913:—President, G. J. Alexander, G.T.R., Richmond, Que.; First Vice President, J. Kidd, C.P.R., Goderich, Ont.; Second Vice President, C. B. James, C.P.R., Orillia, Ont.; Third Vice President, J. A. McKenzie, G.T.R., Woodstock, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Auditors, A. M. Hare, Wabash Ry., Tilsonburg, Ont. Executive Committee:—W. Jackson, C.P.R., Clinton, Ont.; F. W. Churchill, C.P.R., Collingwood, Ont.; W. McIlroy, C.P.R., Peterboro, Ont.; C. E. Horning, G.T.R., Toronto, Ont.; J. F. Dolan, R. & O. Navigation Co., Montreal, Que. There were 119 members and 97 ladies in attendance.

H. W. Baker, Publicity Commissioner, Ottawa, and S. J. Montgomery, City Freight and Passenger Agent, Canadian Northern Ry., Ottawa, were presented with coffee

P300 G. J. Alexander, President Elect, Canadian Ticket Agents' Association.

percolators as tokens of the association's appreciation for looking after the members' comforts during the meeting.

While the business meeting was going on the ladies were taken by members of the local committee to the Parliament buildings, mint, etc., and in the afternoon were given a ride around the city, visiting Rockcliffe park and Britannia on the Bay. In the evening there was an at home at the Chateau Laurier.

On the morning of Oct. 10, the members were entertained to a trip on the steamboat Victoria by Capt. F. Elliott, and in the afternoon the Experimental Farm and Dominion Observatory were visited. In the evening the party were entertained at the theatre.

T. Thauburn, C.P.R. ticket agent, Brampton, Ont., as in previous years, sent a large box of roses and carnations to Ottawa, to be distributed to the ladies of the party.

On October 11, the party left by G.T.R. special train for Montreal and were guests for tea on the Donaldson liner Saturnia. In the evening they boarded the White Star

Dominion Line s.s. Laurentie and left early next morning for Quebec as guests of the line.

During the trip to Quebec, a presentation was made to Capt. Mathias of the Laurentie, and P. W. G. Mitchell, Passenger Manager, first cabing department, White Star-Dominion Line was given a coffee percolator.

The multiplicity of details in connection with the arrangements for the meeting, transportation of members, etc., were most admirably carried out by Secretary de la Hooke.

Railway Finance, Meetings, Etc.

Boston and Maine Rd.—The shareholders have authorized the issue of 100,637 shares of common stock, and a bond issue of \$7,500,000. The new issue will be used to pay off money borrowed for buying certain railways in Massachusetts; and to improve the line, provide additional equipment, etc.

Cap de La Madeleine Ry.—See Canadian Pacific Ry.

Canada Atlantic Ry.—Following are the officers and directors elected for the current year:—President, E. J. Chamberlin; Vice President, H. G. Kelley; Secretary-Treasurer, F. Scott; other directors, W. Wainwright, J. E. Dalrymple, R. S. Logan and W. H. Biggar.

Canada and Gulf Terminal Ry.—The annual meeting was held at Montreal, Oct. 4. Following are the officers and directors for the current year:—President, M. J. O'Brien; Vice President, H. J. Lyons; Secretary-Treasurer, F. W. Rous; Traffic Manager, Rene Dupont; other directors, G. A. Cote, J. A. Ross, D. Caron, C. A. Gauvreau and J. A. O'Brien.

Canadian Northern Ry.—A prospectus of £2,057,612 (\$10,000,000) 5% income charge convertible debenture stock was issued in London, Eng., Sept. 25, the issue price being 106. Between Jan. 1, 1916, and Jan. 1, 1919, this stock may be converted at the holder's option into common stock. A London cablegram says that the underwriters had to take 77% of the issue, owing to the unfavorable market conditions.

Cape Breton Coal, Iron and Ry. Co.—A meeting of the holders of the 5% gold bonds is to be held in London, Eng., Nov. 6, to consider a resolution approving an extraordinary resolution as defined in article 8 of the mortgage deed.

Canadian Northern Western Ry.—There has been filed with the Provincial Secretary at Edmonton, Alta., a trust deed and mortgage made by the C.N.W. Ry. to the British Empire Trust Co., and National Trust Co., as trustees, and the Province of Alberta securing 30-year 4% guaranteed debenture stock or bonds on certain lines in Alberta. The C.N.W. Ry. Co. is a subsidiary of the Canadian Northern Ry. Co., which is building branch lines under provincial guarantee of bonds in Alberta.

Canadian Pacific Ry.—The Board of Railway Commissioners is being asked for a recommendation to the Governor-in-Council for the sanction of leases to the C.P.R. of the following lines:—Alberta Central Ry. (under construction); Campbellford, Lake Ontario and Western Ry. (under construction); Cap de La Madeleine Ry.; Kingston and Pembroke Ry.; St. Marys and Western Ontario Ry.

Central Ry. of Canada—Application has been made to list £222,500 fives on the London, Eng., stock exchange.

Central Vermont Ry.—The report for the year ended June 30 shows:—gross receipts, \$4,435,832.21; operating expenses, \$3,419.

312.40; net operating revenue, \$1,016,519.81; less taxes, \$150,000, net debit from rentals, \$16,887.63; hire of equipment debit, \$177,495.23; fixed charges, \$718,276.90; total deductions, \$1,062,659.76; credit parlor cafe car service, \$5,372.92; and interest on securities held by company, \$53,720; net result, \$12,952.97. The property was well maintained during the year and \$1,136,465.70 was spent on improvements, of which \$22,569.40 was paid out of operating expenses. Of the balance, which was charged to capital account, \$1,090,839.72 was for new equipment, and on this account \$980,000 of 5% equipment trust notes were issued, which will be retired at the rate of \$98,000 each year. Special reference was made to the death of C. M. Hays, Chairman of the company, the board's resolution expressing appreciation of his services to the company having been sent to Mrs. Hays. The officers and directors for the current year are:—Chairman, E. J. Chamberlin; President, E. H. Fitzhugh; Vice President and Attorney, C. W. Witters; General Manager, G. C. Jones; other directors, E. C. Smith, W. S. Webb, J. W. Stewart, J. G. McCullough, E. H. Baker, S. E. Kilner, A. Tuttle, C. P. Smith and E. L. Marston.

Dominion Atlantic Ry.—Approximate passenger earnings for Sept., \$63,405.36; freight earnings, \$56,067.94; total earnings, \$119,473.30, against \$165,200 total earnings for Sept., 1911.

Esquimalt and Nanaimo Ry.—There has been deposited with the Secretary of State at Ottawa, copy of a lease, dated July 1, of the line to the C.P.R.; and also copy of a mortgage made between the E. & N. Ry., the Royal Trust Co. and the C.P.R.

Great North West Central Ry.—An action has been started by J. B. Delap, on behalf of himself and shareholders of this company against the company, the C.P.R., Sir Thos. G. Shaughnessy and R. B. Angus, to recover \$300,000 in lieu of 300 shares of stock alleged to be controlled by him, and for an indemnity for allowing the lapsing of the company's charter for building a line to Battleford, Sask.

Kingston and Pembroke Ry.—See Canadian Pacific Ry.

Klondike Mines Ry.—Following are the officers and directors elected for the current year:—President, H. B. McGiverin; Vice President, J. P. Ebbs; Secretary, A. Haydon; other directors, J. Latta and C. G. Kekewich.

Lake Superior Corporation.—The annual meeting was held Oct. 2. Following are the officers and directors for the current year:—President, T. J. Drummond; Vice Presidents, J. T. Lea, W. K. Wigham and J. F. Taylor; other directors, W. E. Stavert, D. C. Newton, J. T. Terry, jr., F. McOwen, H. M. Price, H. Coppell, J. S. Dale; Secretary, T. Gibson.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—During September press reports stated that the company was about to acquire the Wisconsin and Michigan Ry., and to this report we gave an official denial in our last issue. An officer of the company wrote us: "We have not, and do not intend to purchase this railway." Daily papers during October again stated that the M. St. P. & S.S.M.R. had purchased and was about to take over the Wisconsin and Michigan Ry., including the company's docks at Chicago.

Ottawa Terminals Co.—Following are the officers and directors elected for the current year:—President, E. J. Chamberlin; Vice President, H. G. Kelley; Secretary-Treasurer, F. Scott; other directors, W. Wainwright, M. M. Reynolds, R. S. Logan and W. H. Biggar.

Pacific Great Eastern Ry.—The adjourned annual meeting was held at Victoria, B.C., Oct. 15. Following are officers and directors for the current year:—President, J. W. Stewart; Vice President and General Counsel, D'Arcy Tate; Vice President, T. Foley; other directors, D. MacLeod and V. W. Smith.

Quebec Central Ry.—The annual meeting of shareholders was held in London, Eng., Oct. 16. The report showed that the development of traffic from the recent extension had been satisfactory. There had been a slight decrease in foreign traffic, and it was stated that an increase of about \$35,000 a year in wages was anticipated. Increased expenditure would also have to be undertaken for additional siding accommodation, and when the Quebec bridge was completed a large capital expenditure would be necessary for branch lines in order to meet competition in fast train service. The resolution confirming the lease of the company's property to the C.P.R., was passed unanimously. J. H. Walsh, General Manager, Sherbrooke, Que., was present at the meeting.

Sluswap and Okanagan Ry.—In connection with the taking over of the land grants to the B.C. Southern Ry., and the Columbia and Western Ry. by the British Columbia Government, the C.P.R. agreed to repay to the province \$401,000 which had been paid by the latter, under its guarantee, as interest on the S. and O. Ry. bonds. The transaction was completed recently.

St. Marys and Western Ontario Ry.—See Canadian Pacific Ry.

Temiscouata Ry.—Gross earnings for Aug., \$23,320; expenses, \$16,234; net earnings, \$7,086.

ings, \$7,086. Aggregate net earnings for two months ended Aug. 31, \$16,027.

Thousand Islands Ry.—The annual meeting was held at Deseronto, Ont., Sept. 30. Following are the officers and directors for the current year:—President, E. W. Rathbun, Deseronto, Ont.; Manager, J. F. Chapman, Gananoque, Ont.; Secretary and Treasurer, H. W. Cooper, Gananoque; other directors, B. R. Hepburn, M.P., and S. C. Lee.

Victoria and Sidney Ry.—The annual meeting was held at Victoria, B.C., Oct. 9. Following are the officers for the current year:—President, A. H. McNeill, Vancouver; Vice President, F. Brown, Seattle, Wash.; Secretary-Treasurer, A. M. Thomas.

The **Victoria and Sidney Ry. Co.** has offered to pay to the city of Victoria, B.C., \$36,000, in respect of the amounts the city has been called upon to pay on account of its guarantee of interest of the company's bonds, and to indemnify the city against any future liability on account of the guarantee of the bonds. The city and the province guaranteed \$300,000 of the company's bonds, the city guarantee being to an amount of \$9,000 a year and the provincial guarantee being \$6,000 a year. The city has been called to provide this \$9,000 since the guarantee was given in 1893. The bonds mature in 1917. The company also offers to pay the province \$20,000 and to indemnify it against any further claims under the guarantee. After discussing the matter on Oct. 1 the city council declined to accept the offer.

White Pass and Yukon Route.—Gross earnings for eight months ended Aug. 31, \$738,739, against \$691,760 for same period 1911.

Railway Rolling Stock Notes.

The Hart-Otis Car Co. has ordered from the Canadian Car and Foundry Co. three Rodger distributing ploughs.

The Algoma Central and Hudson Bay Ry. has ordered one all steel snow plough from the Canadian car and Foundry Co.

The recent press report that the Canadian Northern Ry. had ordered 2,000 box cars, in Hamilton, Ont., is, we are officially advised, erroneous.

The Grand Trunk Pacific Ry. has recently received from the Montreal Locomotive Works, six switching locomotives, nos. 400, 401, and 406 to 409; seven Pacific type locomotives, nos. 1100, and 1109 to 1114; and 25 consolidated locomotives nos. 845 to 869.

The combination second class and baggage cars, 11 of which have been ordered by the Canadian Northern Ry. from the Preston Car and Coach Co., will have 72 ft. bodies, wheel with crucible steel centres and tires, McCord journal boxes, Gold car heating equipment, oil lamps, Susemihl side bearings, P.C. & C. Co.'s standard seats, birch finish and cast steel bolsters.

The Canadian Northern Ry. between Sept. 15 and Oct. 15, ordered the following rolling stock,—30 ten wheel locomotives (light) and 30 ten wheel locomotives (heavy), from the Montreal Locomotive Works; 25 first class cars, and 10 baggage cars, from the Canadian Car and Foundry Co.; 25 second class cars from the Crossen Car Co.; and 11 combination cars, from the Preston Car and Coach Co.

The Intercolonial Ry. has ordered 100 Hart Convertible ballast and construction cars, and 50 all steel Otis type, bottom drop door, coal cars, from the Hart-Otis Car Co. The ballast cars will be of the 1912 design, 40 tons capacity, 36 ft. 8 ins. long by 8 ft. 8 ins. wide inside, and will be built with

special removable tops for coal service when not required for ballasting. They will be built by the Canadian Car and Foundry Co.

The Canadian Northern Ry., between Sept. 15 and Oct. 15, received the following rolling stock,—9 locomotives from the Canadian Locomotive Co.; 1 locomotive from the Canada Foundry Co.; 1 first class car, 1 baggage car, 223 box cars and 1 dining car, from the Canadian Car and Foundry Co.; 2 combination cars from the Preston Car and Coach Co.; 5 baggage and mail cars from the Crossen Car Co.; 3 box cars from the Nova Scotia Car Works.

The G. T. R. has recently ordered the following rolling stock,—25 mikado locomotives, from the American Locomotive Co., Schenectady, N.Y.; one locomotive crane and one wrecking crane, in the U. S.; and has received the following additions to rolling stock,—2 baggage cars, from its Montreal shops; 43 refrigerator cars, 324 box cars, from the Canadian Car and Foundry Co.; 99 box cars, 31 steel coal cars, 81 automobile cars, 1 locomotive crane and 1 wrecking crane, from the U. S.

The Intercolonial Ry., between Sept. 11 and Oct. 15, ordered the following rolling stock,—750 thirty ton steel underframe box cars, 100 forty ton steel underframe platform cars, 20 thirty ton refrigerator cars, and one 8,000 gallon steel underframe tank car, from the Canadian Car and Foundry Co.; 100 forty ton Hart convertible ballast cars and 50 fifty ton Otis type all steel dump cars, from the Hart-Otis Car Co., to be built by the Canadian Car and Foundry Co.; 250 thirty ton steel underframe box cars and 50 thirty ton wooden box cars, from the Nova Scotia Car Works; 3 baggage cars, from the Preston Car and Coach Co.; 5 consolidation freight locomotives, from the Canada Foundry Co., and 120 thirty ton

wooden box cars, to be built at the I. R. C. shops at Moncton, N.B.

The C. P. R., between Sept. 14 and Oct. 14, ordered the following rolling stock,—6 freight refrigerator cars, 23 stock cars, 1 first class car, 23 flat cars, 83 vans, 8 baggage and express cars, 2 superintendents' business cars, 1 fruit express car, 5 locomotives, class U3, 10 locomotives, class G2, 1 flanger, 2 double track snow ploughs, 1 double track flanger, 524 wooden box cars, 8 locomotives, class P1, 2 horse express cars, 1 compartment sleeping car, 1 baggage and express car, and 2 mail and express cars, to be built at its Angus shops; 1124 steel frame box cars, 15 tourist cars, 10 first class cars, 20 baggage and express cars, 263 ballast cars, from the Canadian Car and Foundry Co.; 15 locomotives, class N3, 30 locomotives, class G2, 75 locomotives, class P1, and 10 locomotives, class D10, from the Montreal Locomotive Works; 10 locomotives, class N3, from the Canada Foundry Co.; 1 Jordan ballast spreader, from F. H. Hopkins and Co.; 30 sleeping cars, from the Pullman Co.; 30 sleeping cars, from Barney and Smith Co.; 247 steel frame box cars, from the Standard Car Co.; 85 5 steel frame box cars, from the Western Car and Foundry Co.

Following are chief dimensions, etc., of the class U3 locomotives, which the C.P.R. is building at its Angus shops, as mentioned in our last issue:—

Weight on drivers	137,000 lbs.
Driving wheels, diar.	52 ins.
Wheel base	11 ft. 6 ins.
Wheel base, engine and tender	41 ft. 3 1/4 ins.
Cylinders, diar. and stroke	18 by 26 ins.
Valves, type and diar.	Piston, 11 ins.
Valve gear	Walschaert
Axles, main and others	8 1/2 by 10 ins.
Axles, tender	5 by 9 ins.
Boiler, type	Straight top
Boiler pressure	200 lbs.
Heating surface, firebox	138 sq. ft.
Heating surface, tubes	1406 sq. ft.
Heating surface, total	1544 sq. ft.
Tubes, no. and diar.	234—2 ins.
Tubes, length	11 ft. 5 1/2 ins.
Firebox, length and width	.96% by 41 1/4 ins.
Grate area	28 sq. ft.
Staying	Radial and cross
Tender capacity, water	3,500 imp. gals.
Tender capacity, coal	4 tons

Following are chief details of the 30 Pacific type locomotives, class G2, which the C.P.R. is having built by the Montreal Locomotive Works:—

Weight on drivers	142,000 lbs.
Weight of engine, total	220,000 lbs.
Weight of tender	139,000 lbs.
Heating surface, firebox	183 sq. ft.
Heating surface, tubes	2777 sq. ft.
Heating surface, total	2960 sq. ft.
Heating surface, superheater	539 sq. ft.
Grate area	45.6 sq. ft.
Tubes, no. and diar.	175—2 1/4 ins. and 18—2 ins.
Flues, no. and diar.	22—5 1/4 ins.
Driving wheel base	13 ft.
Wheel base of engine, total	33 ft. 7 ins.
Wheel base of engine and tender	59 ft. 6 1/4 ins.
Boiler, type	Extended wagon top
Boiler pressure	200 lbs.
Cylinders, diar. and stroke	22 1/2 by 28 ins.
Driving wheels, diar. outside	70 ins.
Valve gear	Walschaert
Superheater	Vaughan and Horsey
Capacity of tender, water	5,000 imp. gals.
Capacity of tender, coal	10 tons

Following are chief details of the 75 Mikado freight locomotives, class P1, which the C.P.R. is having built by the Montreal Locomotive Works:—

Weight on drivers	198,000 lbs.
Weight of engine, total	258,000 lbs.
Weight of tender	170,000 lbs.
Heating surface, firebox	191 sq. ft.
Heating surface, tubes	3788 sq. ft.
Heating surface, total	3979 sq. ft.
Heating surface, superheater	612 sq. ft.
Grate area	49 sq. ft.
Tubes, no. and diar.	210—2 1/4 ins.
Flues, no. and diar.	30—5 1/4 ins.
Wheel base, driving	16 ft. 6 ins.
Wheel base, total engine	35 ft. 5 ins.
Wheel base, engine and tender	66 ft. 5 ins.
Boiler, type	Extended wagon type
Boiler pressure	180 lbs.
Cylinders, diar. and stroke	23 1/2 by 28 ins.
Driving wheels, outside diar.	63 ins.
Valve gear	Walschaert
Superheater	Vaughan and Horsey

Tender capacity, water	7,000 imp. gals.
Tender capacity, coal	16 tons

The Quebec Central Ry. has ordered four 10 wheel locomotives from the Canadian Locomotive Co. Following are the chief details:—

Weight on drivers	127,500 lbs.
Weight, total	158,500 lbs.
Wheel base, rigid	14 ft. 1 in.
Wheel base, engine, total	24 ft. 4 ins.
Wheel base, engine and tender	52 ft. 1 in.
Heating surface, firebox	165 sq. ft.
Driving wheels, diar.	63 ins.
Driving wheel centres	Cast steel
Driving journals, diar. and length	9 by 12 ins.
Cylinders, diar. and stroke	21 by 26 ins.
Boiler, type	Extended wagon top, radial stay
Boiler pressure	190 lbs.
Tubes, diar.	2 and 5 1/2 ins.
Tubes, length	13 ft.
Brakes	Westinghouse E.T. 6
Weight of tender, loaded	124,000 lbs.
Tank capacity, water	5,000 imp. gals.
Tank capacity, coal	10 tons
Tank, type	V shape
Truck, type	Four wheel
Wheels, diar.	36 ins.
Wheels, type	Solid steel
Journals, diar. and length	5 1/2 by 10 ins.
Brake beam	Simplex

Following are chief details of the class D4g locomotives, which are being built at the C.P.R. Angus shops, as mentioned in our last issue:—

Weight on drivers	114,000 lbs.
Weight, total	138,700 lbs.
Driving wheels, diar.	62 ins.
Wheel base, rigid	11 ft. 10 ins.
Wheel base, engine, total	22 ft. 1 in.
Wheel base, engine and tender	50 ft. 2 ins.
Cylinders, diar. and stroke	19 by 24 ins.
Valve, type and gear	Piston, 11 ins.
Valve gear	Walschaert
Axles, driving, main	8 1/2 by 8 1/2 ins.
Axles, leading and trailing	8 by 8 1/2 ins.
Axles, engine truck	5 by 8 ins.
Axles, tender	5 by 9 ins.
Boiler, type	Wagon top
Boiler pressure	180 lbs.
Heating surface, firebox	152 sq. ft.
Heating surface, tubes	911 sq. ft.
Heating surface, total	1062 sq. ft.
Heating surface, superheater	235 sq. ft.
Tubes, no. and diar.	117—2 ins.; 18—5 ins.
Tubes, length	10 ft. 11 1-16 ins.
Firebox, length and width	.96% by 41 1/4 ins.
Grate area	28 sq. ft.
Superheater	Vaughan and Horsey
Staying	Radial and cross
Tender capacity, water	4,000 imp. gals.
Tender capacity, coal	10 tons

Following are chief dimensions of the class E3 locomotives, which the C.P.R. is building at its Angus shops, as mentioned in our last issue:—

Weight on drivers	107,324 lbs.
Weight, total	145,757 lbs.
Driving wheels, diar.	70 ins.
Wheel base, rigid	13 ft. 3 ins.
Wheel base, total engine	23 ft. 11 ins.
Wheel base, engine and tender	51 ft. 1 1/4 ins.
Cylinders, diar. and stroke	19 by 24 ins.
Valve, type and diar.	Piston, 11 ins.
Valve gear	Walschaert
Axles, driving, main	8 1/2 by 8 1/2 ins.
Axles, leading and trailing	8 by 8 1/2 ins.
Axles, engine truck	5 by 9 ins.
Axles, tender	5 by 8 ins.
Boiler, type	Wagon top
Boiler pressure	180 lbs.
Heating surface, firebox	152 sq. ft.
Heating surface, tubes	1045 sq. ft.
Heating surface, total	1197 sq. ft.
Heating surface, superheater	265 sq. ft.
Tubes, no. and diar.	117—2 ins.; 18—5 ins.
Tubes, length	12 ft. 5 1-16 ins.
Firebox, length and width	.96% by 41 1/4 ins.
Grate area	28 sq. ft.
Superheater	Vaughan and Horsey
Staying	Radial and cross
Tender capacity, water	4,000 imp. gals.
Tender capacity, coal	10 tons

The 10 ten wheel locomotives which the C.P.R. is having built by the Canada Foundry Co., Toronto, will have the cabs fitted with side doors, and the front tank arranged to come up to the back of the cab, and make a covered gangway for the fireman. The tank will be fitted with a coal pusher on top of tank body, to be operated by two air cylinders, which, when lifted, will feed coal to front of tank. The cab will be equipped with electric light. Following are chief dimensions, etc.:—

Weight on drivers	198,000 lbs.
Weight on leading truck	25,000 lbs.
Total weight	223,000 lbs.
Weight of tender, loaded	134,000 lbs.

Wheel base, driving	16 ft. 6 ins.
Wheel base, total engine	25 ft. 5 ins.
Wheel base, engine and tender	55 ft. 11 1/4 ins.
Cylinders, diar. and stroke	23 1/2 by 32 ins.
Valves, type and diar.	Piston, 12 ins.
Driving wheels, diar.	63 ins.
Truck wheels, engine, diar.	31 ins.
Truck wheels, tender, diar.	36 1/4 ins.

Journals	Ma.n. 10 by 14 ins.; others, 9 1/2 by 14 ins.
Journals, engine truck	6 by 11 ins.
Journals, tender truck	5 1/2 by 10 ins.
Boiler, type	Extended wagon top
Boiler, pressure	180 lbs.
Boiler, outside diar., front end	6 ft.
Firebox length and width	104 1/2 by 70 1/2 ins.
Tubes, no. and diar.	210—2 1/4 ins.; 30—5 1/4 ins.
Tubes, length	15 ft. 2 3/4 ins.
Heating surface, tubes	2616 sq. ft.
Heating surface, firebox	165 sq. ft.
Heating surface, total	2781 sq. ft.
Heating surface, superheater	437 sq. ft.
Grate area	49 sq. ft.
Capacity, water	5,000 imp. gals.
Capacity, coal	12 tons
Stack height above rail	15 ft. 3 9-16 ins.
Width outside overall	10 ft. 6 ins.
Superheater	Vaughan and Horsey
Valve motion	Walschaert
Headlights	Electric
Steam heating	Canadian Gold system
Air brakes	Westinghouse, 11 ins. pump
Wheels	Steel tired with retaining rings

Telephone Train Dispatching on the Grand Trunk Railway.

The G.T.R. has had such success with the two telephoning dispatching circuits installed on its Northern division that it has decided to equip the whole line between Montreal and Chicago, which will be divided into five circuits as follows:—

1. Montreal to Brockville, Ont., 125 miles and 26 way stations. Dispatcher located at Montreal.

2. Brockville to Toronto, 210 miles, 30 way stations. Dispatcher located at Belleville, Ont.

3. Toronto to Sarnia, Ont., 169 miles, 30 way stations. Dispatcher located at Stratford, Ont.

4. Extends Port Huron to Battle Creek, Mich., 160 miles, 30 way stations. Dispatcher located at Battle Creek.

5. Battle Creek, Mich., to Chicago, Ill., 172 miles, 39 way stations. Dispatcher located at Battle Creek.

There will be approximately 155 way stations equipped in all, and it has been decided to use the standard 102C plector sets and the swinging type telephone transmitter arm, an order for the whole apparatus having been given the Northern Electric & Manufacturing Co., Montreal.

The Pere Marquette Rd. summer hotel, The Bungalow, at Eriean, Ont., was destroyed by fire, Oct. 12.

The Grand Trunk Pacific Ry. has, according to a Winnipeg press dispatch, decided to install telephone train dispatching over all its lines. The section between Fort William and Superior jct., Ont., will be equipped first.

... certain lines in Alberta

SEALED TENDERS addressed to the Postmaster General, will be received at Ottawa until Noon, on

Friday, the 6th December, 1912, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week, over Rural Mail Route from KING, ONTARIO, to commence at the pleasure of the Postmaster General.

Printed notices, containing further information as to conditions of proposed Contract, may be seen and blank forms of Tender may be obtained at the Post Office of King and at the office of the Post Office Inspector at Toronto.

G. C. ANDERSON,
Superintendent.

Post Office Department,
Mail Service Branch,
Ottawa, 21st October, 1912.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—The Board of Railway Commissioners has approved of location plans for the company's line near Calgary, Alta., from mileage 2.28 to 9.93, and of another line from mileage 0 to 5.49. (Oct., pg. 501.)

Alberta, Peace River and Eastern Ry.—Application was made recently to the Minister of Railways for approval of the route map of a line from the International boundary to Calgary, thence to Edmonton and on to the Peace river and Fort Churchill, on Hudson bay, a total distance of 1,535 miles. The Minister refused sanction, and stated that approval would only be given for such portion of the line as could be built in two years, and further applications would have to be made for the approval of route maps for additional mileage. Further consideration was postponed, and the Minister directed that the company and the Western Dominion Ry. should get together and come to an understanding as to their separate interests. See Western Dominion Ry. (Aug., pg. 411.)

Algoma Central and Hudson Bay Ry.—The annual report of the Lake Superior Corporation, owning the A.C. and H.B. Ry., stated that the railway had been completed to the C.P.R., and would shortly be open for traffic. The extension to the Canadian Northern Ry. is expected to be completed within a few months, and the further extension to the G.T. Pacific Ry. is expected to be completed by the time of holding the next annual meeting. The building of the new terminal station at Sault Ste. Marie and the improvement of the terminal facilities there and at the port of Michipicoten are progressing satisfactorily. (Oct., pg. 501.)

Algoma Eastern Ry.—Press reports state that the line will be completed through to Little Current, Manitoulin Island, Ont., this year, except for the swing bridge over the channel at Little Current. (Aug., pg. 411.)

The British Pacific Coal Co. has been carrying out an extensive development programme on Graham island, the chief island of the Queen Charlotte group off the coast of British Columbia, in the vicinity of Prince Rupert. The company has built a line of 1.25 miles from the pit mouth to a 600 ft. shipping wharf at Queen Charlotte city. An adjoining property is being developed by the Standard Coal Mining Co., which proposes to build a line from its mines to the same wharf. T. R. Morrow, Vancouver, B.C., is president of the B.P.C. Co.

Burrard Inlet Tunnel and Bridge Co.—The Board of Railway Commissioners has approved of revised location plan for the line in the vicinity of the second narrows of Burrard Inlet, near Vancouver, B.C., station O L 174 and 88.7.

There is considerable local opposition to the 200 ft. central swing span in the proposed bridge, and the Department of Public Works is being appealed to for the purpose of having further consideration given to the plans. (Oct., pg. 501.)

Canadian Car and Foundry Co.—Application is being made to the Dominion Parliament for an act confirming the company's letters patent and authorizing it to build a line connecting its Dominion plant in St. Pierre, Que., with its Turcot plant in Montreal, and also with other plants as may from time to time be found convenient; and also to confirm agreements made between the company and the Government and the G.T.R.

Calumet and Northern Ry.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a railway from Calumet to St. Jovite. The provisional directors named are:—J. R. Colby, Montreal West; E. W. Whiting, A. T. Stewart, A. Cushing, T. M. Papineau, Montreal.

Canada and Gulf Terminal Ry.—At the annual meeting in Montreal, Oct. 4, it was decided to leave the question of the extension of the line in abeyance until it has been definitely decided which form the aid to be granted by the province will take. In the meantime the final surveys for the location of the line through the centre of the Gaspé peninsula are being made. (Sept., pg. 450.)

Central Ry. of Canada.—A resolution was passed at a public meeting in Midland, Ont., Oct. 10, endorsing the company's project to build a direct line from Montreal via Ottawa to Midland. C. N. Armstrong, Vice President, said the distance between the two points is 335 miles, and the contract calls for the building of a line with a 0.4 gradient. The company has offered to grant the Dominion Government running powers over the line on an equitable basis. He also said that it is expected to start work upon the western half of the line in the spring. (Oct., pg. 501.)

Dominion Atlantic Ry.—We are officially advised that a contract has been let to Kirk and Cooke, North Sydney, N.S., for building a line from Centreville, on the Cornwallis branch, to Weston, N.S., 15 miles. A start was made with construction early in October.

We are further officially advised that the trestle bridge at Smiths Cove, N.S., which is 375 ft. long, about 50 ft. deep, with 15 ft. openings, is to be replaced by a 10 ft. C.P.R. standard concrete arch and filled. There will be about 40,000 cubic yards of filling, with an arch 155 ft. long. (Oct., pg. 501.)

Active construction on the line has been started by the contractors. The line is 15 miles long, with about two miles of sidings. There will be five stations, Lakeville, Belltown, Grafton, Somerset and Weston. The contract calls for the completion of the line by Aug., 1913, and it is expected to have track laid to Lakeville by the end of the year.

Edmonton, Dunvegan and British Columbia Ry.—The Board of Railway Commissioners has authorized the company to connect its line with the G.T. Pacific in sec. 24, tp. 53, range 25 west 5th meridian, near Edmonton, Alta.

Tracklaying is reported to have been started near Edmonton, and it is expected to have about 120 miles laid this season. The grading is reported completed to Athabasca Landing.

The company will use the union station to be erected by the G.T. Pacific Ry. for passenger traffic in Edmonton, but is laying out its own freight terminals on a site of 142 acres adjoining those of the G.T. Pacific Ry. (Oct., pg. 501.)

Erie, London and Tillsonburg Ry.—We are officially advised that the route map for this line has been approved for the section from Port Burwell to Aylmer, Ont., and that the route map for the balance of the line from Aylmer to London, is before the Minister of Railways for approval. Nothing further has been definitely settled. Only sufficient work is being done in the vicinity of Port Burwell, at present, to retain the

charter rights which have been secured by the G. T. R. (Oct., pg. 501.)

Esquimalt and Nanaimo Ry.—The extension from McBride Jct. to Courtenay, in the Comox Valley, Vancouver Island, B.C., will be about 45 miles long. About 15 miles is reported graded from McBride Jct., and about 10 miles of grading from Courtenay southerly. Tenders are under consideration for the supply of 50,000 ties for the section of the line from McBride Jct. to Big Qualicum river; and for the grading and bridging from Big Qualicum river to Union bay, 19.29 miles. There will be seven steel bridges from 60 to 80 ft. long, and 10 large trestles on the entire extension. The trestles will subsequently be filled. (Oct., pg. 501.)

Fort George to Barkerville, B.C.—Application is being made to the British Columbia Legislature to incorporate a company to build a railway to be operated by steam, electricity or other power from Fort George southeasterly to the Fraser river, at Six Mile creek, and on to the Willow river, thence northeasterly to the Bear river, and thence southeasterly to Barkerville, or between the same points by any other feasible route. Burns and Walkem, Vancouver, B.C., are solicitors for applicants.

Grand Lake and Bell River Ry.—We are officially advised that the charter for the building of this railway was granted to owners of timber limits in the Grand lake district of Quebec. Since the charter was obtained, and subsidies voted by the Dominion Parliament and the Quebec Legislature, the North Ry. has been organized to build a line from Montreal to connect with the National Transcontinental Ry. at Bell river crossing. As this line is likely to pass through the district which the G.L. and B.R. Ry. was projected to serve, it is quite probable that the latter company will not proceed to organization. (July, pg. 339. See North Ry.)

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that construction on this railway has been much impeded by the general bad weather, but, nevertheless, a good portion of the grading has been completed. The work on the bridge foundations, particularly, has been retarded by the frequent recurrence of high water, but at Little river and at the Nashwaak river a considerable portion of the concrete for the abutments and piers has been placed. Track has been laid for nine miles eastward from Gibson, and for six miles westward from the end of the New Brunswick Ry. and Coal Co.'s line near Minto. There are three steam shovels and the necessary train service employed, one of the shovels being devoted to ballasting, which has been completed for about seven miles. It is expected to have steel laid through, and most of the work completed by the end of the year. The branch line from Gibson to Marysville, about three miles, was put under construction at the beginning of October. H. W. D. Armstrong, Fredericton, N.B., is Chief Engineer. (Sept., pg. 450.)

Halifax and South Western Ry.—In a recent interview, the Deputy Commissioner of Mines for Nova Scotia is reported as saying, after having made an inspection of the line, that there was no dangerous condition of the roadbed as had been alleged. There were a considerable number of worn-out ties on the first two sections, but these were being replaced. There were also places on the line where more ballast would improve the appearance, and perhaps the smoothness of running. "It is not clear to me," he added, "that there have been casualties exceeding those on any other road for the same train mileage." (May, 1911, pg. 409.)

Huntingdon and Hemmingford Ry. Co.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a railway from Huntingdon to Hemmingford, Que. The provisional directors named are:—H. Timmis, R. H. McMaster, R. H. Barron, Montreal; C. W. Taylor, A. R. McMaster, K.C., Westmount, Que.

Interprovincial and James Bay Ry.—We have been officially advised that this railway company is a subsidiary of the C.P.R.

The Board of Railway Commissioners has approved location through the parishes of Gendreau and Mercier, Que., mileage 0 to 10.11. The line is planned to start from the C.P.R. Kipawa branch, near Kipawa, and the route has been approved by the Minister of Railways as far as Ville Marie, 54 miles.

Kettle Valley Lines.—Steel is reported to have been laid to Carmi, B.C., and grading from that point to the Hope summit is progressing favorably. The work in the vicinity of Penticton is also reported to be progressing at a satisfactory rate. It is expected that the line will be completed through to the Fraser river by Feb., 1914. The line will include the Hope mountain section, which is being built as a joint section under an agreement by the Vancouver, Victoria and Eastern Ry. As will be seen by reference to the C.P.R. Co.'s annual report on another page of this issue the K.V.L. is to be leased to that company on completion. (Oct., pg. 501.)

C. J. Seymour, engineer on construction, is quoted as having stated in Vancouver, Oct. 11, that it was expected to let the last of the contracts shortly. A location party was engaged in the work between Coquihalla summit and Hope, on the Fraser river, the distance down the valley of the Coquihalla river being nearly 40 miles. As now laid out it will entail the construction of 17 tunnels of different lengths, and the grade up this valley will be 22%, compensated on curves. At Hope the Fraser river will be bridged to connect with the C.P.R. tracks, the structure at present contemplated being estimated to cost \$750,000. The average cost of construction up the Coquihalla valley is estimated at something over \$100,000 a mile, and under the arrangements arrived at through the Board of Railway Commissioners some time ago, it will be used jointly by the K.V. Ry. and the Vancouver, Victoria and Eastern Ry., the lines connecting at Coldwater on the summit. The V.V. & E. has already let a contract for construction from Coalmont to Coldwater, 46 miles, and Twohy Brothers are building 13 miles from the Kettle valley loop.

Mexican Gulf and Manitoba Ry.—Press reports state that surveys have been completed by J. M. Wiley, Chief Engineer of a railway with this title, for the building of a line from Baton Rouge, on the Mississippi river, Louisiana, U.S., through Iroquois, Minneapolis, Princeton, Brainerd, Park Rapids, Mallard, Abda, Bagley and Chourbrook, to the International boundary, and thence to Winnipeg, Man.

A Minneapolis, Minn., despatch, Oct. 7, says J. M. Wiley, F. Beckley and A. J. Beall were arrested and arraigned before the grand jury there on a charge of using the U.S. mails to defraud in connection with the promotion of a company to build a railway from Winnipeg to the Gulf of Mexico. The accused entered pleas of not guilty, and the case was set down for hearing at the U.S. District Court in April, 1913. Beckley and Beall submitted that they were only employes of Wiley, but the U.S. counsel argued that they were represented as officers of the company. Pending the pro-

vision of bail the accused men were taken to jail.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Press reports state that an extensive property has been acquired in Milwaukee, Wis., for a terminal site for a branch line of the M., St.P. and S.S.M. Ry., or its leased line, the Wisconsin Central Ry.

Another report states that the financial end of the project for the laying out of a large union freight yards terminals and freight and passenger stations, has been arranged, and that the M., St.P. and S.S.M. Ry. is one of the companies guaranteeing the bond issue.

A third report states that a project is under consideration for the extension of one of the company's lines to Great Falls, Mont., and connecting up at Coutts, Alta., with the Alberta Ry. and Irrigation Co.'s line. (Oct., pg. 502.)

North Ry.—F. H. Clergue is reported as stating that surveys would be sufficiently advanced by the beginning of 1913 to give out at least part of the contracts. Construction can be carried on north and south from the National Transcontinental Ry. at the crossing of the Bell river; from Montreal, and from the shore of Nottawa bay. (Sept., pg. 491.)

Ontario-Michigan Ry.—Application is being made to the Dominion parliament to extend the time for the construction of the lines authorized to be built by chap. 122 of the statutes of 1910-11. (July, 1911, pg. 647.)

Pacific Great Eastern Ry.—A contract for the building of this line from Vancouver to Fort George, B.C., has been let to P. Welch, who has resigned his position as Vice President to accept it. Construction headquarters are being established at Lillooet, and work will be pushed forward in the direction of Fort George. The location surveys for this section of the line are completed.

After considerable negotiations the company has acquired the railway and all other property of the Howe Sound and Northern Ry. for \$1,000,000, payable in cash in three annual instalments. The agreement of sale, it is said, was signed in Victoria, Oct. 10. The H.S. and N. Ry. has about 10 miles of line in operation running from Newport at the head of Howe sound inward, with power to build into Vancouver on the one side, and via Lillooet to Fort George on the other. It has valuable water frontage rights on Howe sound and a considerable land property in Newport. J. C. Keith, A. McEvoy, formerly of Toronto, and J. C. Gill, Vancouver, were the principal owners of stock in the company. The purchase of this property settles the difficulties of the route as between Vancouver and Lillooet, and will enable construction to be proceeded with more speedily. (Oct., pg. 502.)

Quebec and Saguenay Ry.—We are advised that construction work on this line was closed down at the end of Aug., by the subcontractors, on instructions received from O'Brien and Doherty, the general contractors. The cause assigned is that the cost of construction was far exceeding the original estimate, and the capital raised was not much in excess of these estimates. The estimates of quantities and of cost were made by the engineers in charge, before the appointment of A. H. U. Bruce, the present Chief Engineer. The directors hope to be in a position to reopen the work at an early date and to complete the line. The section under construction extends from near St. Joachim to Murray Bay, Que., 56 miles. The work to Subgaach is about 95% completed, and most of the concrete work of the piers and abutments of the bridges has been completed. Ten miles of rails are on the ground, and the ties and all other track

material for the 56 miles has been delivered. The main work still to be done to complete the contract is a small amount of grading, the tracklaying, ballasting, and the putting in place of the steel bridges. It is not intended to erect any station buildings, tanks, etc., until the steel is laid. The company has completed a line from Murray Bay to the pulp works near Nairns Falls.

A Quebec press despatch, Oct. 9, states that the general contractors, O'Brien and Doherty, are petitioning for the liquidation of the company in order to secure the payment of \$850,000 stated to be due on construction account. The petition will be considered by the Exchequer Court at an early date.

Quebec and North Eastern Ry.—The Quebec Legislature is being asked to incorporate a company with this title to build a railway from the western boundary of the province near Oposatic lake, Pontiac county, northeasterly through the clay belt to the National Transcontinental Ry., near Lake Kapitchuan, about 160 miles, with branch lines, one from the crossing of the Belle river by the N.T. Ry., southeasterly to Mount Laurier, and on to Three Rivers, on to Grand Piles and on to Quebec; and a second from Lake Timiskaming southerly via Ville Marie, thence northeasterly to Lac des Quinze or Lake Expanse. G. Parent, Quebec, is solicitor for applicants.

Reid Newfoundland Co.—Grading is reported to be completed on 80 miles of the branch from near St. Johns to Trepassey Bay, Nfld., and track laid on 70 miles. On the 35 mile branch from Broad Cove to Hearts Content, 12 miles of grading is reported completed and 10 miles of track laid. (Aug., pg. 412.)

St. John and Quebec Ry.—The New Brunswick Government has authorized the issue of \$160,000 of the guaranteed bonds of the St. J. and Q. Ry. Co. on account of the building of the line along the St. John River valley between St. John and Grand Falls. The guaranteed bonds are issued from time to time as required on the progress estimates approved by the Provincial Engineer. (Oct., pg. 502.)

Saskatoon Transfer Ry.—Tenders are reported to be under consideration for the building of a transfer railway through the industrial section of Saskatoon, Sask. The railway is to be built by the Saskatoon Industrial Development and Power Co. It is hoped to have the grading completed this year and to lay the steel next spring.

We are officially advised that the following are the present directors and officers:—Vice President, J. W. White; Treasurer, C. I. Alexander; Chief Engineer, T. W. Brown; directors, A. Flether, A. Dick, —, Anthes. The President had not been elected.

The Sydney and Louisburg Ry. proposes to build a new bridge in Dominion, N.S., in place of the one known as the Red bridge, and to reduce the height over the rails to not less than 15½ ft. (June, pg. 302.)

Timiskaming and Northern Ontario Ry.—In connection with the proposal to electrify one track of the double track between North Cobalt and Cobalt see item Nipissing Central Ry., under Electric Railway Projects. Etc. (Oct., pg. 502.)

The bridge on the Charlton to Elk Lake branch, across Jean Baptiste creek, was reported to have been completed Oct. 12. Track laying is being delayed on account of the scarcity of steel, but the Chairman of the Commission is reported to have stated that he expected steel will be laid into Elk Lake early in December.

Surveys are reported to have been started for a spur line from Iroquois Falls Jct. to the river, where a large pulp mill is being built.

Toronto, Hamilton and Buffalo Ry.—At a conference with the Hamilton board of control, Oct. 2, the General Superintendent stated that the company preferred to raise rather than depress its tracks. The company's engineers are working on plans with that object in view, and will submit them at an early date. (Oct., pg. 502.)

Western Dominion Ry.—A general meeting of shareholders has been called to be held at Carleton Chambers, Ottawa, Nov. 7, to consider an agreement for the purchase by the W.D. Ry. of the Alberta Pacific Ry.'s rights and property. O. E. Culbert is Secretary.

A route map of a section of this projected railway, which has been filed with the city clerk of Calgary, Alta., shows the line running from tp. 22, range 3, west of 5th meridian, and to the south of the Sarscee Indian reservation. From this point it runs into Calgary, and following a course a considerable distance west of, but parallel to the C.P.R. Calgary-Edmonton line, turns into Edmonton. The city council has declined to express any approval of the route until a map is submitted showing in detail the proposed route within the city boundary.

Application will be made to the Board of Railway Commissioners, Nov. 16, for a recommendation to the Governor-in-Council for the sanction of an agreement for the purchasing by the W.D. Ry. Co. of all the charter rights, etc., of the Alberta Pacific Ry. Co., and for the amalgamation of the two companies.

In the course of an application of the Atlantic, Peace River and Eastern Ry. to the Minister of Railways for approval of a route map, representatives of the W.D. Ry. entered opposition on the ground that the route granted to them under a provincial charter would be interfered with. The Minister intimated that before the matter came before him again the two companies should reach an agreement as to the location of their respective lines.

White Pass and Yukon Route.—We are officially advised that the directors are not yet in a position to say definitely whether or not the line will be extended as reported. The matter has been under consideration for some time. (Sept., pg. 451.)

Grand Trunk Railway, Betterments, Construction, Etc.

Portland, Me.—As the result of a recent inspection by Montreal officials, press reports state, it has been decided to demolish the present wharf and immigration buildings at Portland next year, and to replace them by larger structures.

Central Vermont Ry. Improvements.—The Board of Railway Commissioners has granted an extension of time within which the company shall ballast its line between St. Lambert and Waterloo; Marneville and St. Cesaire; Farnham and Freligsburg; Iberville and Farnham, Que.

Quebec Freight Sheds.—A conference has been held between representatives of the Quebec harbor and Vice President Kelley, G.T.R., with a view to the demolishing of the present freight sheds at Point Levis, and the building of a structure there sufficiently large to accommodate the traffic of the G.T.R., the Intercolonial Ry. and the Quebec Central Ry.

Montreal.—An arrangement has been completed between the company and the Montreal city council to divert the line of St. Etienne street so as to improve the approaches to the Victoria Jubilee bridge, and to extend the freight yard there.

The council has granted a permit for

the erection of a six-story solid brick building for freight offices, on the corner of Wellington and St. Etienne streets, at an estimated cost of \$90,000. As announced in our last issue the contract for the building has been let to the John S. Metcalf Co., Montreal.

Prescott, Ont.—R. S. Logan, Vice President, informed the Prescott, Ont., town council at a recent meeting, that owing to the lateness of the season it would not be possible to do very much with the laying out of the proposed terminals there this year, but that a start would be made early next spring.

Orillia to Midland, Ont.—The track between Orillia and Midland, Ont., 33½ miles, is being relaid with 90 lbs. steel, replacing the old 60 lbs.

Canada Atlantic Ry.—Superintendent Coleman is quoted as stating, Oct. 14, that the company had under consideration plans for the extension of its harbor facilities at Depot Harbor, Ont. The grain carrying trade at the port has doubled during the year.

Ottawa Terminals Ry.—Application is being made to the Dominion Parliament to authorize the company to increase its bond issue from \$3,000,000 to \$6,000,000.

Hamilton Freight Yards.—The Board of Railway Commissioners has authorized the company to lay six tracks across Robert street to connect with its new freight yard at the corner of Elgin and Barton streets, Hamilton, Ont.

Grand River Bridge, Brantford.—The Board of Railway Commissioners has authorized the rebuilding of bridge 75, mileage 8.21, over the Grand river at Brantford, Ont. Work was reported to have been started Oct. 14, and it is expected that the bridge will be completed by the spring. The plans provide for erection of an additional span of 76½ ft. at the western end, and the lengthening of the eastern span by 15 ft. The new piers and abutments will be of concrete. The cost is estimated at \$40,000.

Electrification of Branch Lines.—A petition asking for the electrification of the Galt and Elmira branch lines was presented to U. E. Gillen, Superintendent Middle division, at Waterloo, Ont., Sept. 25. He is reported to have expressed his general approval of the project, and to have stated that it would be given every consideration by the management at an early date. (Oct., pg. 503.)

Great Northern Railway Lines in Canada

Vancouver, Victoria and Eastern Ry. and Navigation Co.—A. H. Hogeland, Chief Engineer, G.N. Ry., returned to Vancouver, B.C., Oct. 10, after an inspection of construction work on the line. He is reported as stating in an interview that the quantity of work done since his last visit had exceeded his expectations. There was considerable scarcity of labor, and the work was consequently held back. The line is now completed between Penticton and Coal-mountain in the Coquihalla valley. A contract has been let to Guthrie, McDougal and Co. for the grading of 42 miles from Coal-mountain to Coquihalla summit. This firm has sublet 26 miles of the contract, and has a large gang at work on the other 16 miles. The only section of the line not under construction is the 38 mile stretch between Coquihalla and Hope, which is the roughest portion on the whole line. It is to be built for joint operation by the V. V. and E. Ry. and the Kettle Valley Lines. It is expected to have the line from the present terminus at Abbotsford in

operation to Hope by the end of the year. This mileage includes a section of the Canadian Northern Pacific Ry., for the use of which an agreement has been approved. The western section of the line comprises the old New Westminster Southern Ry., the constructed section of the Vancouver, Westminster and Yukon Ry., and some other pieces of line, which connect up with New Westminster, Vancouver, and the ferries plying from Port Guichon to connect with the Victoria and Sidney Ry. on Vancouver Island.

Vancouver Terminals.—A. H. Hogeland, Chief Engineer, G.N.R., is reported as having stated in Vancouver, Oct. 10, that he expected the company would start active work on the construction of the new station within the next six months, and that it would be completed about the same time as the grading and filling work now under way on False creek. (Oct., pg. 507.)

Maintenance of Way by Contract.

In reference to the article on this subject which appeared in Canadian Railway and Marine World for October, one of the most prominent and practical railway officials in the Dominion has written us as follows:—

"I favor doing all work possible by contract, but I do not think it would ever be advisable to let the maintenance of way and bridges by contract, for the reason that it would be difficult to supervise contractors, and I do not see how they could perform this work at any less cost than a railway company, and in my opinion they certainly would not do it as well.

"Of course, grading, track laying and ballasting on new lines are let by contract, and we also contract for crushed rock, etc., but I would never favor letting ordinary maintenance by contract. The experience of railways which let repairs to their freight cars and locomotives by contract does not appear to have been very satisfactory."

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$1,329,700	\$1,335,100	\$404,600	\$133,000
Aug.	1,745,800	1,375,000	370,800	56,100
	\$3,575,500	\$2,710,100	\$865,400	\$189,100
Incr.	\$ 679,000	\$ 489,900	\$189,100	

Approximate earnings for Sept., \$1,671,500, against \$1,576,400 for Sept., 1911.

The mileage in operation during Aug. was 4,297, against 3,711 in Aug., 1911.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$12,052,398.53	\$7,604,221.68	\$4,448,176.90	\$745,148.57
Aug.	12,251,715.87	7,533,799.21	4,717,925.66	642,354.65
	\$24,304,114.45	15,138,011.89	\$9,166,102.56	\$1,397,503.22
Inc.	4,220,391.89	2,832,888.67	\$1,397,503.22	

Approximate earnings for Sept., \$11,322,000, against \$9,834,000 for Sept., 1911.

Grand Trunk Railway Earnings, Etc.

Aggregate from July 1 to Sept. 30:—

	1912.	1911.	Increase.
G.T.R.	\$11,359,577	\$10,351,900	\$1,008,577
C.A.R.	620,311	551,464	68,847
G.T.W.R. ..	1,681,962	1,685,190	96,772
D.G.H.&M.R.	615,359	570,764	44,595

Totals .. \$14,277,209 \$13,158,618 \$1,218,791

W. HARTY, Kingston, Ont., formerly President, Canadian Locomotive Co., has given \$1,000 to the Kingston general hospital.

Mainly About Transportation People.

W. H. ARDLEY, General Auditor, G.T.R., Montreal, has been appointed a justice of the peace.

WALTER LINDLEY, at one time Secretary, Grand Trunk Ry. Co., died suddenly in England, Oct. 22, aged 80.

SIR WM. MACKENZIE, President, Canadian Northern Ry., has subscribed \$2,000 to the Vancouver high school cadet fund.

G. L. BROWN, of the Pullman Co.'s staff, who died at St. Paul, Minn., Sept. 26, was well known in railway circles in Winnipeg.

S. S. FULLER, who died at Stratford, Ont., Oct. 1, was Vice President of the old Stratford and Port Dover Ry., now merged in the G.T.R.

W. SUTHERLAND TAYLOR, ex-Treasurer C.P.R., and Mrs. Taylor, who have been spending the summer in Great Britain, have returned to Montreal.

Mrs. G. M. Bosworth, wife of G. M. BOSWORTH, Vice President, C.P.R., was one of the recent arrivals in England, by the s.s. Empress of Britain.

S. R. NORCROSS, who died at Port Colborne, Ont., Oct. 1, was father of J. W. NORCROSS, Toronto, Manager Merchants' Montreal and Interlake Lines.

M. WHITTY, for many years G.T.R. roadmaster at Stratford, Ont., died at Mitchell, Ont., Oct. 9, aged 77. He had been living retired for some years.

J. G. SULLIVAN, Chief Engineer, Western Lines, C.P.R., Winnipeg, has been elected Honorary President of the Engineering Society of Regina, Sask.

BARLOW CUMBERLAND, ex-Vice President, Niagara Navigation Co., who has been living in Port Hope, Ont., for several years, has removed to Toronto for the winter.

HON. J. S. HENDRIE, M.P.P. for Hamilton, Ont., who has special charge of railway legislation, etc., in the Ontario Legislature, is visiting Scotland with his wife.

HON. F. COCHRANE, Minister of Railways and Canals, has sold his house in Toronto, which he occupied before becoming a member of the Dominion Cabinet.

A. TRITES, charge hand at the Intercolonial Ry. roundhouse, Moncton, N.B., fell into a firebox during the course of his work, Oct. 10, and had three of his ribs broken.

W. A. JEWETT, Nelson, B.C., has been appointed stipendiary magistrate for the territory west of the Rocky Mountains, with headquarters at Tete Jaune Cache, B.C.

REX CROASDELL, Publicity Agent, Canadian Northern Ry., who was operated on in Toronto, recently, for internal trouble, was reported, Oct. 24, to be progressing favorably.

JAS. NORTON was presented with a silver tea service by the staff of the Intercolonial Ry. general freight office, Moncton, N.B., on the occasion of his marriage recently.

R. W. BURNETT, General Master Car Builder, C.P.R., Montreal, has been elected a member of the M.C.B. special committees on car wheels and car trucks, for the 1913 convention.

E. J. CHAMBERLIN, President G.T.R. and G.T. Pacific Ry., has been elected President, G.T. Western Ry. and other G.T.R. subsidiary companies in Michigan, in succession to the late C. M. Hays.

R. CUMMINGS, for the past 14 years station agent at Truro, N.S., has retired after 41 years' service with the Intercolonial

Ry. He and Mrs. Cummings left Truro, recently, for San Francisco, Cal.

S. McELMOYLE, Freight Claims Agent Canadian Northern Ry., Winnipeg, was presented with a cabinet of silverware by the staff of the General Freight Agent's office, Oct. 11, on the occasion of his marriage.

W. P. HINTON, General Passenger Agent, G.T. Pacific Ry., was the principal guest at a civic dinner at Watrous, Sask., Oct. 7, on the occasion of the opening of the sanatorium and summer hotel at Lake Manitou.

The Winnipeg Free Press of Oct. 5 recalls the fact that it was on that day in 1892 that D. B. HANNA removed from Portage la Prairie to Winnipeg to become Treasurer of the old Manitoba and Northwestern Ry.

WM. HARDER, who was one of the first C.P.R. officials who arrived in Winnipeg in Mar., 1881, as Traffic Manager of the western lines, paid a short visit to the city, Sept. 23, after an absence of nearly 30 years.

P301 W. H. Winterrowd, Mechanical Engineer, C.P.R. Angus Shops, Montreal.

G. O. SOMERS, who resigned his position as General Freight Agent, Chicago Great Western Ry., a short time ago, has been appointed Manager of the Canada Bond Co., Ltd., which has been organized in Toronto.

A. E. KILLAM, Inspector of Bridges and Buildings, Intercolonial Ry., Moncton, N.B., has been elected President, American Railway Bridge and Building Association, for the current year. He was a Vice President during the year 1911-12.

A. B. CAREY, Resident Engineer, Vancouver Island Power Co., Victoria, B.C., was presented with a silver tea set, by the members of the staff engaged on the Jordan river power plant construction, on leaving the service, Sept. 23.

SCOTT GRIFFIN, European Manager, Canadian Northern Ry., and Canadian Northern Steamships, Ltd., and Mrs. Griffin, who is a daughter of Sir Wm. Mackenzie, will occupy the latter's house, 37 Curzon street, Mayfair, London, Eng., for the winter.

Miss D. A. Musgrove, only daughter

of T. A. MUSGROVE, Repair Track Foreman, Canadian Northern Ry., Winnipeg, was married in Winnipeg, recently, to A. Tamm, of Davis and Tamm, civil and contracting engineers, Brownsville, Texas.

W. C. C. MEHAN, General Superintendent, and G. A. McNICOLL, Superintendent G.T. Pacific Ry., Prince Rupert, B.C., were presented with gold pins, by the Governor General, recently, in connection with his trip over that part of the system.

A. LICHTENHEIN, of New Rochelle, N. Y., representative of the Galena-Signal Oil Co., who spends a considerable portion of his time in Montreal, was operated on, Oct. 14, for appendicitis. On Oct. 19 we were advised that he was recovering satisfactorily.

E. J. CHAMBERLIN, President, G.T.R. and G.T.P.R.; M. Donaldson, Vice President G.T. Pacific Ry., and G. E. Fauquier, railway contractor, Ottawa, were members of a shooting party which returned to Winnipeg, Oct. 12, over the G.T. Pacific Ry. from the Rocky Mountains.

M. J. POWER'S appointment as General Storekeeper, Canadian Pacific Ry., was correctly announced in Canadian Railway and Marine World for September, but in the October issue he was erroneously referred to as the General Purchasing Agent, which position is held by E. N. Bender.

J. W. LEONARD, Assistant to the Vice President, C.P.R., Montreal; M. N. Todd, President, Galt, Preston and Hespeler St. Ry., and J. Irving, General Sales Agent, Nova Scotia Steel and Coal Co., arrived in Quebec by the s.s. Empress of Britain, Oct. 11, after a two months' trip to Europe.

ARTHUR LE COUR, of Montreal, who was engaged as chief clerk on the G.T.R. grade separation work in the west end of Toronto, died suddenly, Oct. 19, from hemorrhage of the stomach, in Montreal, where he had gone to check all accounts between the city and the railway in connection with the work.

HON. M. E. BERNIER and JAMES MILLS, members of the Board of Railway Commissioners, will at the end of 1913 have served for 10 years, and it is reported that they will then be superannuated, and with that end in view the necessary legislation will be introduced at the Dominion parliament's ensuing session.

R. DOLLAR, principal owner and manager of the Dollar line of steamships, trading between San Francisco, Cal., and the Orient, but registered at Victoria, B.C., according to the London Times, is a native of Scotland, and started life as a shanty chore boy at \$10 a month with the Edwards Lumber Co., Ottawa, when 13 years old.

J. T. McGRATH, who recently resigned as Superintendent of Rolling Stock, Chicago and Alton Rd., Bloomington, Ill., following the resignation of F. W. Morse as Vice President and General Manager, was, at one time, Master Mechanic, G.T.R., Battle Creek, Mich., which position he resigned on Mr. Morse entering the Chicago and Alton Rd.'s service.

J. E. WALSH, Manager of the Canadian Manufacturers Association traffic department, was reported recently to have been appointed as an additional traffic expert to the Board of Railway Commissioners. We have been officially advised that such an appointment has not been made, and Mr. Walsh has also made a statement to the same effect.

SIR WILLIAM WHYTE, of Winnipeg, who is a director of the C.P.R., must have been amused when he saw his portrait in Toronto Saturday Night recently and under it the caption, "Sir William Whyte, K.C.B., elected a director of the Grand

Canadian Railway AND Marine World

ESTABLISHED 1898.

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and
Canal Contractors' Interests.
Official Organ of the various Canadian
Transportation Associations.

Trunk Pacific Ry. Co." The G.T.P.R. direc-
tor is Sir Wm. Henry White, K.C.B., who
lives in England.

W. A. GARRETT, recently chairman of
the General Managers' Association of Chi-
cago, has been elected Vice President in
charge of operation of the Chicago Great
Western Rd., at Chicago, Ill.

C. S. MELLE, President of the New
York, New Haven and Hartford Rd., has
also been elected President of the New
York, Ontario and Western Ry., succeed-
ing T. P. Fowler, resigned.

R. J. LYDIATT, chief clerk to A. Price,
General Superintendent, Alberta division,
C.P.R., Calgary, has resigned, on his appoint-
ment as private secretary to the chairman
of the governors of Calgary university. He
was chief clerk to Mr. Price, during the
period from 1899, when the latter was
located at Toronto, Fort William, Winni-
peg and later at Calgary.

J. McLELLAN, who died in Winnipeg,
Oct. 8, was identified with the Manitoba
Cartage Co. soon after he went to Winni-
peg in 1878, and later on joined the C.P.R.,
with which company he remained until he
retired from active service about 18 months
ago. He served as roadmaster and train-
master prior to becoming city freight agent,
which position he vacated in 1905, subse-
quently being appointed Superintendent of
Terminals at Winnipeg.

T. HICKEY, Roadmaster, Michigan Cen-
tral Rd., St. Thomas, Ont., sustained a
broken leg and some severe cuts, when his
gasoline car jumped the rails near Muncie,
Oct. 8. He was accompanied by W. O.
Honston, Division Engineer, and Assistant
Roadmaster Kinney, who both escaped
with slight bruises. It was later discov-
ered by the confession of a number of small
boys, that the placing of a spike in a
switch point was the cause of the accident.

R. A. BARRETT, who has been appointed
Superintendent, Toronto, Hamilton and
Buffalo Ry., Hamilton, Ont., commenced
railway service as Yardmaster, Michigan
Central Rd., at Montrose, Ont., and was
subsequently Trainmaster, M.C.R. division
east of St. Thomas, Ont., with headquar-
ters at Niagara Falls, Ont., and in 1911
was appointed Trainmaster, T.H. & B. Ry.,
at Hamilton, Ont., which position he held
to the date of his present appointment.

L. G. COLEMAN, who was recently ap-
pointed Superintendent, Ottawa division,
G.T.R., Ottawa, was born in Macon, Ga.,
Dec. 7, 1877, and entered railway service,
Oct. 1, 1900, since when he has been, to
May 1, 1902, engaged with the G.T.R.,
Delaware, Lackawanna and Western Rd.,
and with the Rogers Locomotive Works,
returning to G.T.R. service, May 1, 1902,
since when he has acted in the capacities
of Trainmaster and Assistant Superinten-
dent at Ottawa.

X. H. CORNELL, who has been appointed
Superintendent of Transportation, Pere Mar-
quette Rd., Detroit, Mich., was, at one time,
Master of Transportation, G.T.R. Western
division, Durand, Mich., resigning that posi-
tion in 1909, on his appointment as Super-
intendent of Transportation, Chicago and
Alton Rd., Chicago, Ill., when F. W. Morse,
formerly Vice President and General Man-
ager, G.T. Pacific Ry., was appointed Vice
President and General Manager, Chicago and
Alton Rd. His resignation from the C. & A.
Rd. followed that of Mr. Morse.

ROBERT TOOMBS, Auditor, Minneapolis,
St. Paul and Sault Ste. Marie Ry., Min-
neapolis, Minn., died suddenly in a street
car there, Oct. 10. He had been troubled
with heart disease for some time. He was
born at Milwaukee, Wis., Apr. 19, 1859,
and entered railway service in 1874. Before

becoming connected with the M. St. P. &
S.S.M.R. he was auditor of the Wisconsin
Central Ry., now the Chicago division of
the M. St. P. & S.S.M.R., and prior to that
he was auditor of the Duluth, South Shore
and Atlantic Ry., all of which are con-
trolled by the C.P.R.

SIR DONALD MANN, who has been
touring the Canadian Northern Ry. to the
Pacific coast, returned to Toronto, Oct. 14.
In connection with the recent report that
his life had been attempted while in Van-
couver, he stated that no such attempt
had been made, but that an insane person,
who had declared his intention of shooting
him, Sir Thos. Shanghnessy and E. H.
Harriman, had been taken care of by the
police. The fact that Mr. Harriman has
been dead for some time, is evidently a
proof that the man is not in his right
mind.

Biographical data respecting W. C. LAN-
CASTER, Electrical and Mechanical En-
gineer, Montreal Tunnel and Terminal Con-
struction, Mackenzie, Mann & Co., was pub-
lished in Canadian Railway and Marine
World for September, pg. 460, and his por-
trait should have been given on the same
page, but by an unfortunate transposition
it appeared in the Electric Railway Depart-
ment on pg. 470, being designated as a
portrait of F. D. Burpee, Superintendent
and Purchasing Agent, Ottawa Electric Ry.
Mr. Lancaster's portrait is therefore re-
printed in this issue, with the correct desig-
nation.

A. J. IRONSIDES, whose appointment as
District Master Mechanic, district 4, Sas-
katchewan division, C.P.R., Saskatoon,
was announced in our last issue, was born
at Orillia, Ont., in 1882, and entered C.P.R.
service in 1901, since when he has been, to
1902, wiper at Windsor street roundhouse,
Montreal; 1902, foreman, same place; 1902
to Aug., 1906, similar position at Brandon,
Man.; Aug., 1906 to June, 1907, locomotive
driver, same place; June to Dec., 1907,
locomotive driver, Kenora, Ont.; Dec., 1907,
to Apr., 1908, locomotive driver, Brandon,
Man.; Apr., 1908, to Aug., 1912, locomotive
driver, Sutherland, Sask.

H. E. WHITTENBERGER, who has been
appointed Superintendent, Middle division,
G.T.R., Toronto, and whose portrait ap-
pears in this issue, was born at Peru, Ind.,
Nov. 9, 1869, and entered transportation
service in 1885, since when he has been,
to Feb., 1897, in various positions, Wabash
Rd.; Feb., 1897, to May, 1902, Trainmaster,
Middle division, G.T.R.; May, 1902, to
Sept., 1904, Superintendent, Denver and
Rio Grande Ry.; Sept., 1904, to Jan., 1906,
Superintendent, Cincinnati, Hamilton and
Dayton Ry., Indianapolis, Ind.; Jan., 1906,
to Sept. 30, 1907, Superintendent, Kansas
City Southern Ry.; Sept. 30, 1907, to
Oct. 17, 1912, Superintendent, Eastern
division, G.T.R., Montreal.

C. T. DELAMERE, whose appointment as
Assistant District Engineer, Canadian
Northern Ontario Ry., Montreal-Port
Arthur lines, Port Arthur district, was an-
nounced in a recent issue, was born at
Brainerd, Minn., Mar. 18, 1881, and gradu-
ated in civil engineering from Minnesota
university, in 1903. He entered railway
service in 1903, since when he has been, to
1904, transitman, Northern Pacific Ry.;
1904 to 1905, Resident Engineer, same road;
1905 to 1908, Division Engineer, same road;
1908 to 1909, Locating Engineer, Western
Dakota Ry.; 1909 to 1911, Division En-
gineer, same road; 1911 to July, 1912, Resi-
dent Engineer and Division Engineer, C. N.
Ontario Ry.

J. D. McDONALD, Assistant General
Passenger Agent, Grand Trunk Ry., Chi-

eago, left there, Sept. 8 with his wife and daughter on the American Association of General Passenger and Ticket Agents' special train for Seattle, Wash., where the Association's annual meeting was held, and the party proceeded to Victoria and Vancouver where they were entertained on behalf of the C.P.R. by H. W. Brodie, Assistant General Passenger Agent. After returning with the Association to Tacoma, Wash., Mr., Mrs. and Miss McDonald went to Prince Rupert, B.C., and to the end of steel on the G.T.P.R. east of that point, and then visited Lower California, returning to Chicago, Oct. 6.

PATRICK DUBEE, Secretary-Treasurer, Montreal Tramways Co., and President Canadian Street Railway Association, while attending the American Electric Railway Association convention in Chicago early in October, was summoned back to Montreal, owing to the death of his father-in-law, Matthew Dineen. Mr. Dineen came from Ireland some 50 years ago, and was one of the pioneer landscape gardeners in Montreal. Some 35 years ago he became a contractor and did a large amount of civic work, especially sewer and conduit construction. He was warden of St. Patrick's church for some 30 years and one of the oldest members of St. Patrick's Society, being also associated with St. Ann's Total Abstinence Society.

J. B. GRAY, whose appointment as Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., lines east of Toronto and Sudbury, Ont., Montreal, was announced in our last issue, was born in July, 1876, and entered the Pullman Co.'s service in 1893 as junior clerk in the dining car store room, remaining in that department in various capacities in several large U. S. cities, until 1895, when he was appointed Assistant Commissary at Chicago, Ill. He remained there until 1909, when he was appointed Assistant Superintendent, Sleeping Car Department, at Portland, Ore., which position he held up to the time of his appointment as Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Calgary, Alta.

R. A. BARRETT, who has been appointed Superintendent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Berlin, Ont., Aug. 26, 1870, and entered railway service, 1884, since when he has been, to 1888, in various positions in the Michigan Central Rd. offices at St. Thomas, Ont.; 1888 to 1891, in various positions in the yards, same road, St. Thomas, Ont.; 1891 to 1897, General Yardmaster, same road, St. Thomas, Ont.; 1897 to 1898, road conductor, same road; 1898 to Feb., 1901, Assistant Trainmaster, same road, Montrose, Ont.; Feb., 1901 to July, 1911, Trainmaster, M.C.R. lines between Suspension bridge, Buffalo and St. Thomas; July, 1911, to Oct. 1, 1912, Trainmaster, T.H. & B.R., Hamilton, Ont.

T. DAVIES, who has been appointed Chief Dispatcher, district 1, Canadian Northern Ry., Port Arthur, Ont., was born at Bangor, Wales, June 17, 1878, and entered railway service, Aug., 1892, since when he has been, to Apr., 1894, call boy, C.P.R., Medicine Hat, Alta.; Apr., 1894, to Apr., 1895, car checker, C.P.R., Medicine Hat, Alta.; May 1, 1895 to Aug., 1899, operator and agent at various points, C.P.R., between Medicine Hat, Alta., and Donald, B.C.; 1899 to 1902, operator and agent, various roads in the U.S.; Oct. 3, 1902, to Sept. 23, 1905, operator, Canadian Northern Ry., Winnipeg; Sept. 24, 1905, to Jan. 30, 1906, dispatcher, same road, Dauphin, Man.; Feb. 3, 1906, to Aug. 2, 1911, dispatcher, same road, North Battleford, Sask.; Aug. 3, 1911, to Sept. 11, 1912, dispatcher, same road, Winnipeg.

W. H. WINTERROWD, whose appointment as Mechanical Engineer, C.P.R., Angus locomotive shops, Montreal, was announced in our last issue, and whose portrait appears in this issue, was born at Hope, Ind., Apr. 2, 1884, and educated at Shelbyville, Ind., and Purdue University, whence he graduated in 1907. He entered railway service in 1905, since when he has been, to 1906, blacksmith helper, Lake Erie and Western Ry., Lima, O., 1906 to 1907, air brake and car repairman, Pennsylvania Rd. western lines, Dennison, O.; 1907 to 1908, special apprentice, Lake Shore and Michigan Southern Ry., Elkhart, Ind.; 1908 to 1909, Roundhouse Foreman, Lake Erie, Alliance and Wheeling Ry., Alliance, O.; 1909 to 1910, Night Roundhouse Foreman, Lake Shore, Michigan and Southern Ry., Youngstown, O.; 1910, Roundhouse Foreman, same road, Cleveland, O.; 1910 to Sept., 1912, Assistant to Mechanical Engineer, same road, Cleveland, O.

P302 W. C. Lancaster,
Electrical and Mechanical Engineer, Montreal
Tunnel and Terminal Construction.

National Transcontinental Railway Construction.

An Ottawa press dispatch of Oct. 17 says that the Dominion Government has made arrangements for the putting in operation of the N.T. Ry. from Moncton, N.B., to Levis, Que., and that Intercolonial Ry. rolling stock will be used. It is expected that the section from Cochrane, Ont., the junction with the Timiskaming and Northern Ontario Ry., to Lake Superior Jct., will be ready for temporary operation early in November. From Lake Superior Jct. to Winnipeg the line is already being operated by the G.T. Pacific Ry. under an agreement. The question of the taking over of that section of the line by the G.T.P. Ry. has not yet been settled. (Oct., pp. 506.)

Grand Trunk Pacific Railway Construction.

According to a report of work done to Sept. 30, 159 stations have been located on the main line between Winnipeg and Fitzhugh, Alta. Of these 69 have been completed, 44 are under construction, and pre-

parations are being made for starting the remaining 46.

The Board of Railway Commissioners has approved of revised location for the line from mileage 347.5 to 372.4 east of Prince Rupert; through the Noon-la Indian reserve, mileage 395 east of Prince Rupert; to the boundaries of the Sa-La-Quo Indian reserve, mileage 449.18 to 452.94 east of Prince Rupert; and mileage 49.26 to 59.17 in the Fort George District.

GRAND TRUNK PACIFIC RAILWAY BRANCH LINES.

Application is being made to the Dominion Parliament for an act extending the time within which to complete the construction of the several lines authorized to be built by the acts of 1906, 1909, 1910 and 1911.

Local press reports state that the company has acquired a considerable area of property on McKellar street, Fort William, Ont., on which it is proposed to lay out freight sheds, etc. The property is said to be two city blocks in extent.

A considerable area of property is reported to have been acquired to the south east of Brandon, Man., on which, it is stated, the company will lay out terminal yards for the use of its Harte-Brandon branch now under construction.

Two station buildings are reported to five others to be under construction. This branch runs northerly from Nielville, Sask. On the branch southwesterly to Regina, four stations are reported to have been completed, and three more to be under construction.

The Board of Railway Commissioners has authorized the opening for traffic of the branch line from Regina to the International boundary, from Regina to Talmage, Sask., mileage, 66.5. The Board has also approved of revised location plans for the line from sec. 11, tp. 7, range 10, to sec. 13, tp. 3, range 4, west second meridian, mileage 91.13 to 135.93.

It was reported that on Sept. 30 there were three station buildings under construction on the branch line from Young to Prince Albert, Sask., and that plans for 16 other standard stations had been prepared.

The Board of Railway Commissioners has authorized the building of a connection between the terminus of the branch line from Oban, in Battleford, Sask., and the starting point of the line from Battleford into the Cutknife district. The Board has authorized the establishment of terminals in Battleford. It has also approved of revised location plans for the Cutknife branch through sec. 36, tp. 43, range 18, west of 3rd meridian.

Construction department reports state that on Sept. 30 four station buildings had been completed on the branch out of To-field to Calgary, Alta., and that three others were under construction. Track is reported to have been laid to Irricana, and the grading to have been completed into Calgary. At the crossing of the Bow river, about four miles out of Calgary, a steel bridge is being erected by the Canadian Bridge Co., It is expected that this will be completed, and steel laid into Calgary early in November. The Board of Railway Commissioners has approved of revised location plans for the line south of Calgary towards the International boundary, from n.e. ¼ sec. 12, tp. 13, r. 24, to n.w. ¼ sec. 34, tp. 11, r. 23, w. 4 m., mileage 81.41 to 90.43, South Alberta district.

The Board of Railway Commissioners has authorized the opening for traffic of the Alberta coal branch from mileage 0 to 36.6. This line starts at Bickerdike, on the main line, and runs southwesterly to the coal fields in the Brazeau river district. (Oct., pg. 507.)

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Bellingham Bay and British Columbia Rd.—J. S. GOLITHON has been appointed Master Mechanic, vice J. A. Haley, resigned. Office, Bellingham, Wash.

Canada and Gulf Terminal Ry.—J. E. PINAULT has been appointed Superintendent

P248 U. E. Gillen,
Superintendent, Eastern Division, Grand Trunk
Railway.

dent, vice J. R. Cassidy, resigned. All traffic employees report direct to him on all matters pertaining to their duties; agents and conductors continue to report returns, collections, etc., to T. J. Lyons. Office, Matane, Que.

Canadian Northern Ry.—J. C. O'DONNELL, heretofore Trainmaster, district 2, Winnipeg, has been appointed Trainmaster, district 1, Rainy River, Ont., vice G. W. Chapman, assigned to other duties.

I. L. BOOMER, heretofore Chief Dispatcher, district 1, Port Arthur, Ont., has been appointed Trainmaster, Port Arthur subdivision, with jurisdiction over Port Arthur and Atikokan terminals, vice G. Darrah. Office, Port Arthur, Ont.

T. DAVIES has been appointed Chief Dispatcher, district 1, Port Arthur, Ont., vice I. L. Boomer, promoted.

A. E. COX, heretofore Storekeeper, Winnipeg, has been appointed General Storekeeper for all lines west of Port Arthur, Ont. Office, Winnipeg.

G. A. GLAY, heretofore conductor, has been appointed Trainmaster, district 2, Winnipeg, vice G. W. Chapman, who succeeded J. C. O'Donnell, and subsequently resigned.

Canadian Pacific Ry.—D. L. JONES, who has been acting as Master Mechanic, Atlantic division, McAdam jet., N.B., during the absence on sick leave of C. R. Ord, has resumed his duties as District Master Mechanic, districts 1 and 2, Woodstock, N.B., Mr. Ord having returned.

J. F. GILDEA, heretofore Locomotive Foreman, Schreiber, Ont., has been appointed Locomotive Foreman, Hochelaga, Montreal, vice J. Wilkinson.

J. SKINNER, heretofore ticket agent at Owen Sound, Ont., has been appointed city passenger, ticket and telegraph agent, Peterboro, Ont.

E. J. MURPHY, heretofore Locomotive Foreman, John street yards, Toronto, has been appointed Assistant Foreman, West Toronto.

D. L. DERROW has been appointed Locomotive Foreman, John street yards, Toronto, vice E. J. Murphy, transferred.

W. McILROY, heretofore ticket agent at Peterboro, Ont., has been appointed city passenger and ticket agent, Hamilton, Ont.

W. H. WALKER has been appointed night locomotive foreman at Fort William, Ont., vice A. Brown, promoted.

P. S. LINDSAY, heretofore District Master Mechanic, district 3, Manitoba division, Brandon, has been appointed District Master Mechanic, district 2, Manitoba division, vice A. G. Hebb, transferred. Office, Winnipeg.

L. FISHER, heretofore District Master Mechanic, district 4, Manitoba division, Souris, has been appointed District Master Mechanic, district 3, Manitoba division, vice P. S. Lindsay, transferred. Office, Brandon.

A. G. HEBB, heretofore District Master Mechanic, district 2, Manitoba division, Winnipeg, has been appointed District Master Mechanic, district 4, vice L. Fisher, transferred. Office, Souris.

H. J. HUMPHREY has been appointed Car Service and Fuel Agent, Saskatchewan division, vice R. A. Gamble. Office, Moose Jaw.

R. COOPER, heretofore Assistant Car Foreman, has been appointed Car Foreman at Moose Jaw, Sask., vice J. B. Shelton who has left the service.

A. H. MIDDLETON has been appointed Assistant Car Foreman at Moose Jaw, Sask., vice R. Cooper, promoted.

A. McARTHUR, heretofore Locomotive Foreman, Fort William, Ont., has been appointed Locomotive Foreman, Sutherland, Sask., vice J. Sindall, transferred.

W. THOMAS, heretofore assistant chief clerk, has been appointed chief clerk to General Superintendent, Alberta division, C.P.R., Calgary, vice R. J. Lydiatt.

E. W. DEMER has been appointed Storekeeper at Macleod, Alta. This is a new position.

J. SINDALL, heretofore Locomotive Foreman, Sutherland, Sask., has been appointed Shop Foreman, Cranbrook, B.C.

T. S. BERTRAM has been appointed Roundhouse Foreman, Revelstoke, B.C., vice R. Millar, acting Roundhouse Foreman, assigned to other duties.

C. BROWN, heretofore Roundhouse Foreman, Vancouver, has been appointed Locomotive Foreman, North Bend, B.C., vice W. E. Hayward, appointed Roundhouse Foreman, Vancouver.

W. E. HAYWARD, heretofore Locomotive Foreman, North Bend, B.C., has been appointed Roundhouse Foreman, Vancouver, vice C. Brown, appointed Locomotive Foreman, North Bend.

Dominion Atlantic Ry.—F. VAN BLARCOM has been appointed Locomotive Foreman at Kentville, N.S. The titles of Mechanical Superintendent, formerly held by W. Yould, and Master Mechanic, formerly held by J. H. Yould (now Superintendent of Motive Power) have been abolished.

Grand Trunk Pacific Ry.—A. S. WRIGHT has been appointed Locomotive Foreman at Regina, Sask., vice A. J. Roberts, resigned.

J. NESS has been appointed Car Foreman, Regina, Sask.

C. E. STEWART has been appointed Locomotive Foreman at Biggar, Sask., in charge

of locomotive and car departments, vice G. M. Carruthers, assigned to other duties.

G. M. CARRUTHERS, heretofore Locomotive Foreman, Biggar, Sask., has been appointed night foreman, Melville, Sask.

The following agents have been appointed, —Gerald, Sask., R. W. Gibson; Ituna, Sask., G. C. Smart; Leney, Sask., W. J. Reid; Stony Plain, Alta., R. L. Williams; Bickerdike, Alta., W. A. Bishop; Fitzhugh, Alta., R. C. Harmon; Reford, Sask., T. Hutchings; Dandurand, Sask., A. E. Robin; Lebreton, Sask., R. N. McNabb.

Grand Trunk Ry.—U. E. GILLEN, heretofore Superintendent, Middle division, Toronto, has been appointed Superintendent, Eastern division, vice H. E. Whittenberger, transferred to Toronto. Office, Montreal.

G. W. CLARK has been appointed Locomotive Foreman, St. Lambert, Que.

W. H. WALKER, heretofore Locomotive Foreman at Brockville, Ont., has been appointed Locomotive Foreman at Turcot, Que., vice J. D. Scott, resigned.

L. J. McLAUGHLIN has been appointed Locomotive Foreman at Brockville, Ont., vice W. H. Walker, transferred.

H. E. WHITTENBERGER, heretofore Superintendent, Eastern division, Montreal, has been appointed Superintendent, Middle division, vice U. E. Gillen, transferred to Montreal. Office, Toronto.

W. H. FARRELL, Superintendent of Terminals, is in Montreal, apparently temporarily, in connection with terminal work there. A Montreal press dispatch of Oct. 25 states that he has been appointed Superintendent of all G.T.R. terminals, with headquarters at Montreal.

P303 H. E. Whittenberger,
Superintendent, Middle Division, Grand Trunk
Railway.

G. STOKES, heretofore Yardmaster, Don yard, Toronto, who was recently appointed General Yardmaster, Toronto terminals, vice J. McCormick, has since been appointed acting Terminal Superintendent, Toronto, while W. H. Farrell is absent in Montreal.

G. A. METLER has been appointed Yardmaster, Don yard, Toronto, vice G. Stokes, promoted.

L. E. WRIGHT has been appointed town ticket agent at Collingwood, Ont.

J. J. KNIGHT, heretofore agent at Exe-

ter, Ont., has been appointed Local Freight Agent, Guelph, Ont., vice W. F. Briggs, transferred to Brantford, Ont.

W. F. BRIGGS, heretofore Local Freight Agent, Guelph, Ont., has been appointed Freight Agent at Brantford, Ont.

T. J. CASSIDY, heretofore dispatcher, has been appointed Chief Dispatcher, St. Thomas, Ont., vice W. J. Hogan, promoted.

W. J. HOGAN, heretofore Chief Dispatcher, St. Thomas, Ont., has been appointed Master of Transportation, Western division, vice G. W. Gillespie, transferred. Office, Durand, Mich.

J. A. CLANCEY has been appointed Assistant Superintendent of Terminals, Milwaukee jet, Mich.

The following agents have been appointed, —Huntingdon, Que., W. A. Hunter; Whites, Que., E. E. Bourdon; Jacques Cartier jet, Que., L. Rainville; Anson jet, Ont., F. E. Hutchinson; Caledonia, Ont., H. Rose; Jordan, Ont., N. G. Case; Bright, Ont., M. J. Byrne; St. Polycarpe jet, Que., W. Hardy; Rainy Lake, Ont., J. M. Smith.

Great Northern Ry.—J. M. GRUBER, heretofore General Manager, has been appointed Vice President in charge of operation. Office, St. Paul, Minn.

W. P. KENNEY, heretofore General Traffic Manager, has been appointed vice President in charge of traffic. Office, St. Paul, Minn.

G. H. EMERSON, heretofore Assistant General Manager, has been appointed General Manager, vice J. M. Gruber, promoted. Office, St. Paul, Minn.

Intercolonial Ry.—JOHN JOHNSON has been appointed Roundhouse Foreman, Sydney, N.S., vice D. McLennan, assigned to other duties.

Press reports state that the office of Chief Engineer has been abolished and that W. B. MACKENZIE has been appointed Right of Way and Lease Agent.

Michigan Central Rd.—J. F. DEIMLING, heretofore Chief Engineer, Pere Marquette Rd., Detroit, Mich., has been appointed Engineer of Construction, M.C.R. Office, Detroit, Mich.

A. L. SARVEY, heretofore Grade Separation Engineer, has been appointed Assistant Chief Engineer, vice F. B. Marble, resigned. Office, Detroit, Mich.

E. M. WALKER has been appointed Grade Separation Engineer, vice A. L. Sarvey, promoted. Office, Detroit, Mich.

A. K. GALLOWAY, heretofore Roundhouse Foreman, St. Thomas, Ont., has been appointed General Foreman, Detroit locomotive terminals, Detroit, Mich.

G. R. GALLOWAY, heretofore Roundhouse Foreman, Montrose, Ont., has been appointed Roundhouse Foreman, St. Thomas, Ont., vice A. K. Galloway, promoted.

J. R. SANDS, heretofore machinist, has been appointed Roundhouse Foreman, Montrose, Ont., vice G. R. Galloway, transferred.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—H. B. DIKE, General Solicitor, who has been appointed Assistant to the President, as announced in our last issue, will have such special duties as may be assigned to him from time to time. Office, Minneapolis, Minn.

C. N. KALK, heretofore Principal Assistant Engineer and Signal Engineer, has been appointed Chief Engineer, vice T. Greene, deceased. Office, Minneapolis, Minn.

S. B. NOBLE has been appointed Travelling Passenger Agent, with headquarters at 299 Broadway, New York City. This is a new position.

T. A. HAVERSTAD has been appointed Agricultural Commissioner, Minneapolis, Minn. This is a new position.

F. R. SMALLEY has been appointed Travelling Agent, with headquarters at 379 Robert street, St. Paul, Minn., vice H. T. Duffy, promoted.

B. C. HARRISON has been appointed District Passenger Agent, with headquarters at 222 Bannatyne avenue, Winnipeg, Man.

H. T. DUFFY, heretofore Travelling Agent, St. Paul, Minn., has been appointed District Passenger Agent, Portland, Ore., vice G. Taylor, resigned. Office, corner of Third and Pine streets.

New York Central and Hudson River Rd.—S. R. PAYNE, heretofore General Superintendent, Western district, Syracuse, N.Y., has been appointed Assistant to General Manager, performing such duties as may be assigned to him. Office, Rochester, N.Y.

T. W. EVANS, heretofore Superintendent, Buffalo division, Buffalo, N.Y., has been appointed General Superintendent, Western district, vice S. R. Payne, promoted. Office, Syracuse, N.Y.

P304
A. E. Cox,
General Storekeeper, Canadian Northern Railway.

Pere Marquette Rd.—W. L. KELLOGG, Superintendent of Motive Power, has had his office moved from Detroit to Wyoming, and will have direct charge of the shops there, and a general supervision over the motive power and car department.

H. O. HALSTEAD, heretofore Superintendent of Transportation, Detroit, Mich., has been appointed Superintendent, Detroit division, comprising the line from Detroit to Grand Rapids, including Detroit terminals and Detroit-Windsor ferry operation. Office, Detroit.

X. H. CORNELL, heretofore Superintendent of Transportation, Chicago and Alton Rd., Chicago, Ill., has been appointed Superintendent of Transportation, Pere Marquette Rd., vice H. O. Halstead, assigned to other duties. Office, Detroit, Mich.

S. A. CHAMBERLIN, heretofore Master Mechanic, Grand Rapids, Mich., has been appointed Master Mechanic, Saginaw, Mich., vice F. C. Pickard, resigned.

Toronto, Hamilton and Buffalo Ry.—R. A. BARRETT, heretofore Trainmaster, Hamilton, Ont., has been appointed Superintendent. Office, Hamilton.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Quebec Ry.—It is expected that the new car and machine shops at Limoilou, a suburb of Quebec, will be completed by Nov. 30. Nothing definite has yet been decided as to the company's terminals in Quebec, but negotiations are going on between the city and the company, and how they will turn out depends a good deal upon what will be done by the Dominion Government in connection with the terminals for the National Transcontinental Railway. The C.N.Q. Ry. has a large area of land at Cap Rouge, and it is said that this is to be developed for the company's steamships harbor.

Canadian Northern Montreal Tunnel and Terminal Co.—Supplemental letters patent have been granted under the Dominion Companies Act increasing the capital from \$50,000 to \$5,000,000.

The shaft at Maplewood Ave. is reported completed, and preparations are being made for starting driving the tunnel north and south from it. This will make four headings at work driving.

The Montreal city council is in favor of the Board of Railway Commissioners deciding the question of the overhead line from Lagauchetiere street to the water front.

Montreal-Ottawa-Port Colborne Line.—The Board of Railway Commissioners has approved of location plans for the line through Jacques Cartier and Hochelaga counties and part of Montreal, mileage 43.56 to 55.23 from Hawkesbury.

It is expected that the grading on the section of the line out of Ottawa to Fitzroy harbor on the Ottawa river will be completed this fall.

The Board of Railway Commissioners has authorized the C.N.O. Ry. to cross the Algoma Eastern Ry. with its main line extension to the Algoma Eastern Ry. on lot 6, con. 4, McKim tp., Sudbury district.

The Board of Railway Commissioners has approved of revised location plans for the line from mileage 278.11 to 280.11, and from 283.76 to 285.72 from Port Arthur, Ont.

Canadian Northern Ontario Ry.—It is expected that the line from Ottawa to Toronto will be completed this year. With the exception of the bridges over the Rideau and Jock rivers, the section between Ottawa and Smiths Falls is practically ready for track laying. This work is to be started early in November. The section between Harrowsmith, the end of the Bay of Quinte Ry., which is incorporated in the line to Smiths Falls, is well advanced towards completion.

Toronto-Hamilton-Buffalo Line.—The Board of Railway Commissioners has authorized the building of the line across the C.P.R. at Lambton, mileage 6.13 from Yonge street, Toronto; the building of a bridge across the Humber river, mileage 6.32 west of Yonge street, Toronto; and of the location of the line through Saltfleet tp., mileage 45.17 to 54.21.

Canadian Northern Ry.—The Board of Railway Commissioners has approved of revised location of the proposed connection of the International Bridge and Terminal Co.'s line with the C.N.R. at Fort Frances, Ont.

It is reported that work is to be started at once on what is known as the Fort Rouge cut off, south of Winnipeg. A temporary trestle bridge will be erected across the Red river, and the reports state that the cut off will be completed by the end of November.

The Board of Railway Commissioners has approved of location plans for a line

through tps. 4-7, range 1 east of the first meridian to range 2 west of the first meridian, mileage 0 to 18.08.

Tenders are under consideration for the building of a 256 ft. extension to the freight shed at Brandon, Man. R. B. Pratt, Winnipeg is architect.

The Board of Railway Commissioners has approved of location plans for the line through tps. 43 and 44, range 4, west of the 3rd meridian, Sask., mileage 28.18 to 37.96.

The Alberta Government has approved of the route map of a line from Hanna to Medicine Hat, Alta. It is stated that construction will be started at Medicine Hat at an early date. The line, it is stated, will connect with the main line near Bruderheim.

Track is reported to have been laid on the branch line from Edmonton to Camrose, on the Vegreville-Calgary line for 16 miles. It is expected that the line into Calgary will be completed this year. Steel has been laid, it is reported, to within 12 miles of Calgary, and on Oct. 16 it was stated that the city council had agreed to give the company all the facilities necessary. The bridge over the river to carry the line right into the centre of the city is to be completed by Oct., 1913. Grading is reported to have been completed on the line from Saskatoon to Berry creek, 240 miles, and track has been laid for 220 miles. This line is to connect with the Vegreville-Calgary line at Drumheller. It is expected to complete 50 miles of the line south of Calgary this year.

The Board of Railway Commissioners has approved of revised location plan for the line through tp. 46, range 1, west of the 6th meridian, mileage 224.66 to 228.36. This is described as being a line of the C.N. Alberta Ry.

An agreement is reported to have been reached between the city and the company, under which the terminal station, etc., in Edmonton, Alta., is to be erected during 1913.

Canadian Northern Pacific Ry.—We are officially advised that the following sub-contracts have been let by the Northern Construction Co., on the line west of Yellowhead Pass, B.C.:—Mileage 0 to 10, Phelan and Shirley mileage 10 to 18, Sieurs-Carey Co.; mileage 18 to 34, Palmer Bros. and Henning; mileage 34 to 39, S. B. Hogan; mileage 49 to about 160 miles north of Kamloops, Palmers Bros. and Henning. This section of the work is being done under the supervision of the general contractors' Edmonton office, the remaining mileage to Port Mann being handled from Vancouver.

It is said from a letter received Oct. 2, by the mayor of Kamloops, B.C., that a divisional point is to be located there. The description and plan of the proposed bridge across the North Thompson river near Kamloops, already described in our columns, have been filed with the Public Works Department at Ottawa.

Tenders are under consideration for the building of lines to be known as the Okanagan branches. The starting point is at Kamloops, B.C., on the main line, and the first section extends to Vernon, 83 miles, while the second extends from Vernon and Lumley to Kelowna, 48 miles. Contractors were asked to tender separately on each section and to give alternative prices for grading based on the following classifications:—A.—Solid rock; loose rock; bard pan; earth. B.—Solid rock; all other material. The work is to be completed within a year from signing of contract.

The Vancouver city council, Oct. 1, adopted an agreement with the company as to the False creek property to be utilized as terminals, and a bylaw is being pre-

pared for submission to the ratepayers.

Lines on Vancouver Island.—We are officially advised that the 40 mile contract referred to in our last issue as having been let to the Northern Construction Co., has been handed over to Murdoch Co. Work has been started at the Alberni end, and it is expected to have it completed in a year.

Plans have been approved by the British

Columbia Government for a line from mileage 100, near Cowichan lake, to mileage 210 on Quinsam river.

The Premier of British Columbia is reported as stating, Oct. 4, that an agreement had been reached with the company as to terminals in Victoria, and that the details will be laid before the Legislature. (Oct., pg. 510.)

Canadian Pacific Railway Betterments, Construction, Etc.

St. John Terminals.—Press reports state that the company is negotiating with the city council of St. John, N.B., for a strip of land at Fourville station for the erection of additional office buildings.

Place Viger Improvements.—It is reported that a contract has been let to the Canadian Stewart Co., for the erection of an addition to the Place Viger hotel, Montreal to give 140 extra guest rooms.

Ottawa Improvements.—D. McNicoll, Vice President, is reported as stating, Oct. 7, that the project for the building of a tunnel at Ottawa had not been abandoned as had been reported. Negotiations were going on with the Dominion Government, and everything depended upon their outcome. It was possible that there would be some change in the plans, but nothing definite could be said for some time.

Smiths Falls, Ont.—Press reports state that local firms have been asked to tender for the erection of a locomotive house and machine shop at Smiths Falls, Ont.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has authorized a connection to be made with the Kingston and Pembroke Ry. at Parham station, mileage 24.8 from Glen Tay, Ont.; and has approved of revised location plans for the line from mileage 125.5 to 127.32.

North Toronto Grade Revision.—Tenders are under consideration for the construction of the substructure of the Avenue road subway, Toronto, a part of the grade separation work in North Toronto. B. Ripley is engineer in charge.

Sault Ste. Marie Branch Grade Revision.—The Board of Railway Commissioners has approved plans for the revision of the alignments and gradients of the Sudbury-Sault Ste. Marie branch, mileage 7.42 to 8.39 Webbwood section.

Bergen Northeasterly.—The Board of Railway Commissioners has approved of location plans for a line northeasterly from Bergen, Man., to lot 58, Kildonan parish. 9.92 miles.

Swift Current Bassano Cut Off.—We are officially advised that it is not intended to do any construction this year beyond the 80 miles at present under contract.

The Board of Railway Commissioners has approved revised location on this line from sec. 35, tp. 22, range 27, to sec. 17 tp. 23, range 29, mileage 93 to 111.9.

Irricana to Bassano.—Press reports state that the branch line from Irricana to Bassano, Alta., has been completed, and will be handed over to the operating department at an early date.

Lacombe Easterly.—The Board of Railway Commissioners has approved of location plans for the extension of the branch from Lacombe easterly from mileage 100.07 to 146.10. The line at present terminates at Monitor, Alta., and it will effect a junction with the Moose Jaw northwesterly line at Kerrobert.

New Southern Main Line.—In connection with the construction of various lines in Saskatchewan and Alberta, and the building of the Kettle Valley lines, which are

being taken over by the C.P.R., western papers have published a map showing a new main line from Winnipeg to Vancouver. It is stated that this line would be nearly 400 miles shorter than the present line, and that the gradients through the Rocky mountains would be easier than on the line through Kicking Horse pass. The section of the line under construction in Saskatchewan and Alberta is an extension of the line westerly from Weyburn, now terminating at Viceroy, Sask., to Sterling, Alta.

Kaslo and Slocan Ry.—Press reports state that W. P. Tierney, contractor, has received instructions from the C.P.R. to complete the standardization of the K. and S. Ry. between Bear lake and Whitewater mine, and to carry on the work of standardizing the rest of the line during the winter. The work includes, besides the alteration of the dump from narrow to standard gauge, the reduction of gradients, and the straightening out of curves. The recently completed spur line from the C.P.R. at Three Forks connects with the K. and S. Ry. at Bear lake. The Board of Railway Commissioners has authorized the opening for traffic of the line from Three Forks to Bear Lake, 5.2 miles.

Calgary to Vancouver Second Track.—We are officially advised that the contract for grading between Hammond and Ruby creek, B.C., has been let to Grant Smith and Co. and McDonnell, who have already put in their camps and started work. The portion between Hammond and Mission, 20 miles, will be completed by the end of this year. This stretch is light work, located along the Fraser river, with a few shovel cuts, the remainder being hand grading. Between Mission and Ruby creek the work is slightly heavier, with some rock work. There is one tunnel 440 ft. long, which will have to be widened for the second track, and a couple of small grade reductions which will give a ruling gradient of 0.4%. There is no heavy bridge work on this stretch, as all the sub-structures or permanent bridges have already been built to carry a second track, and the temporary bridges are being replaced with permanent structures this year. H. Rindal, Division Engineer, Vancouver, is in charge.

Car Ferry Barge.—A contract is reported to have been let to the British Columbia Marine Ry., Esquimalt, for the construction of a car ferry barge to be named Transfer No. 4. It will be a steel car ferry barge, 260 ft. long, 42 ft. beam, and 12 ft. deep, built to accommodate 15 loaded railroad cars. Unlike the Transfer No. 3, recently constructed at Esquimalt, the new barge will not be provided with holds to carry cargo. She will have three lines of rails, and all her cargo will be in the cars loaded on the deck. She will be amply provided with bulkheads, the plans providing for two longitudinal bulkheads and five transverse bulkheads. Accommodation for the crew will be provided by a house at the forecable head, and a small donkey boiler will be provided to furnish steam for the windlass, pumps, etc. The barge will be provided with the requisite pumps and other gear. (Oct., pg. 504.)

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

17553. Sept. 24.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) location from mileage 125.5 from Glen Tay, south-westerly through Hope tp. and Hope, Ont., to mileage 127.3; and rescinding orders 16977, July 6, and 17330, Aug. 2.

17554. Sept. 24.—Authorizing C.P.R. to open for traffic its Nakusp and Slocan branch from Three Forks to Bear Lake, B.C., mileage 0 to 5.2.

17555. Sept. 23.—Authorizing C.P.R. to build spur for Maple Lake Lumber Co., west of Spragge tp., Ont.

17556. Sept. 24.—Authorizing C.P.R. to build spur 436 ft., northwesterly across Outremont yard, and across Montreal Light, Heat and Power Co.'s property, being of St. Laurent parish, Que.

17557. Sept. 23.—Approving location of C.N. Ontario Ry. station grounds at South March.

17558. Sept. 23.—Authorizing C.N. Ontario Ry. to build across public road, lot 9, con. 2, Gibbons tp., mileage 266.5 from Ottawa.

17559. Sept. 23.—Authorizing Canadian Northern Ry. to build between secs. 3 and 4, tp. 29, r. 7, w. 4 m., on its Goose Lake extension.

17560. Sept. 23.—Authorizing C.N. Ontario Ry. to build bridge across Stony Creek, Fitzroy tp., mileage 34.4 from Ottawa, and to divert Jimmys creek.

17561. Sept. 24.—Temporarily approving Western Canada Power Co. standard freight and passenger tariffs, C.R.C., B. 4, and A. 1.

17562. Sept. 25.—Authorizing Toronto, Hamilton and Buffalo Ry. to build spurs for National Steel Car Co., Hamilton, Ont.

17563. Sept. 25.—Authorizing G.T.R. to build siding for the Campbell Flour Mills Co., Toronto.

17564. Sept. 25.—Extending to Nov. 15 time within which Central Vermont Ry. shall ballast line between St. Lambert and Waterloo, Marieville and St. Césaire, Farnham and Friesburg, and Iberville and Farnham, Que.

17565. Sept. 24.—Approving Burrard Inlet Tunnel and Bridge Co.'s revised location from stations 0 to 174-88.7, and 4-56.3 to 324-32, B.C.

17567. Sept. 25.—Approving Esquimalt and Nanaimo Ry. plan of steel trestle across Arbutus canyon at bridge 14.9, B.C.

17568. Sept. 23.—Authorizing C.P.R. to build spur for Elmore and Snyder, near Laggan, B.C., and additional track across St. Thomas and Deschamps streets, Three Rivers, Que.

17570. Sept. 25.—Approving C.P.R. plan showing replacement of existing trestle at bridge 37.6, Walkerton subdivision, Ont.

17571. Sept. 23.—Authorizing C.P.R. to carry road allowance across its Reston to Wolseley branch at mileage 36.61, Sask.

17572. Sept. 24.—Amending order 16998, July 13, re C.P.R. spur at Longue Pointe, Que.

17573. Sept. 23.—Authorizing C.P.R. to build spur for J. C. Graham Co., St. John, Winnipeg.

17574. Sept. 25.—Authorizing C.P.R. to build spur for Cornellier and Joly, near Angus station, Que.

17575. Sept. 23.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across and divert road allowance between lots 16 and 17, con. 1, Hope tp., mileage 129.68 from Glen Tay, Ont.

17576, 17577. Sept. 21, 25.—Authorizing Canadian Northern Ry. to build its Goose Lake extension between sec. 33, tp. 30, and sec. 3, tp. 31, p. 12, w. 4 m., and to build its Carlton branch across seven highways in Saskatchewan.

17578. Sept. 25.—Authorizing C.N. Quebec Ry. to divert St. Davids street, Hawkesbury, Ont., on s.e. and n.w. sides of its right of way.

17579, 17580. Sept. 23.—Approving C.N. Ontario Ry. revised location through unsurveyed territory, Algoma district, mileage 278.11 to 280.11, and 283.76 to 285.72 from Port Arthur.

17581 to 17583. Sept. 25, 24.—Authorizing C.N. Ontario Ry. to build across Etobicoke creek, mileage 10.98 west from Toronto, across public road on lot 2, con. 4, Crerar tp., and across public road between Field and Springer tps., Nipissing district.

17584. Sept. 23.—Authorizing C.N. Ontario Ry. to build bridge across Ground Hog river, mileage 149.7 from Sudbury Jct.

17585. Sept. 23.—Amending order 17006 re C.N. Ontario Ry. crossing of public road in Ste. Genevieve parish, Que., by substituting new plan.

17586. Sept. 23.—Authorizing C.N. Ontario Ry. to build across C.P.R. at Lambton, Ont., mileage 6.13 from Yonge street, Toronto, and

rescinding order 16234, March 11, in same connection.

17587. Sept. 23.—Authorizing town of Pointe-aux Trembles, Que., to extend Frontenac street across Canadian Northern Montreal Tunnel and Terminal Co.'s tracks.

17588. Sept. 23.—Authorizing Niagara, St. Catharines and Toronto Ry. to build spur for Montrose Paper Co., Thorold, Ont.

17589. Sept. 24.—Defining express delivery and collection limits in Maple Creek, Sask.

17590. Sept. 26.—Authorizing C.P.R. to build between Blanshard and East Nissouri tps., station 193.4, Ont.

17591. Sept. 25.—Authorizing C.P.R. to rebuild bridge 81.5 on its Woodstock subdivision, Ont.

17592. Sept. 24.—Approving revised location of C.P.R. Lacombe easterly branch from s.e. ¼ sec. 26, tp. 36, r. 12, mileage 100.07, to s.e. ¼ sec. 3, tp. 35, r. 5, w. 4 m., mileage 146.10, Alta.

17593. Sept. 26.—Approving replacement of C.P.R. span on bridge 18.9, Elora subdivision, Ont.

17594. Sept. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to connect with Kingston and Pembroke Ry. (C.P.R.) at Parham station, mileage 24.8 from Glen Tay, Ont.

17595, 17596. Sept. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 178.44 over public road, and to build across four highways, mileage 89.15 to 93.04 from Glen Tay, Ont.

17597. Sept. 26.—Approving revised location of G.T. Pacific Branch Lines Co., Calgary-Boundary branch from west line, n.e. ¼ sec. 12, tp. 13, r. 24, to south line n.w. ¼ sec. 34, tp. 11, r. 23, w. 4 m., mileage 81.41 to 90.43, South Alberta district.

17598. Sept. 28.—Authorizing G.T.R. to rebuild bridge 303 over Beaver river, milepost 107.46, district 14, Northern division, Ont.

17599. Sept. 26.—Approving revised location of G.T.R. siding for Western Foundry Co., Wingham, Ont.

17600. Sept. 25.—Authorizing G.T.R. to rebuild three bridges on its Middle division at milepost 44.61, Rockwood; 31.87, at Limehouse, and 122.84, at Sebringville, Ont.

17601. Sept. 26.—Authorizing C.N. Ontario Ry. to build across public road overhead on lot 44, con. 1, Camden tp.

17602, 17603. Sept. 26, 25.—Authorizing Alberta Interurban Ry. to build overhead structures across G.T. Pacific Branch Lines Co.'s Tofteld-Calgary branch, and C.P.R. Langdon branch, sec. 2, tp. 28, r. 26, w. 4 m.

17604. Sept. 26.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to connect with G.T. Pacific Ry., sec. 24, tp. 53, r. 25, w. 5 m.

17605. Sept. 24.—Approving C.N. Ontario Ry. location through Jacques Cartier and Hochelaga counties and part of Montreal, mileage 43.56 to 55.23 from Hawkesbury.

17606. Sept. 25.—Authorizing C.N. Ontario Ry. to build across Foresters creek, Ross tp., Ont.

17607. Sept. 26.—Authorizing G.T.R. to operate across the Montreal Park and Island Ry. near Turcot, Que.

17608. Oct. 1.—Authorizing Esquimalt and Nanaimo Ry. to build across four highways on its Comox extension, mileage 40.75 to 44.8 from McPride Jct., B.C.

17609. Sept. 26.—Approving revised location of International Bridge and Terminal Co.'s line, and connection with Canadian Northern Ry. in Fort Frances, Ont.

17610. Sept. 30.—Defining express delivery and collection limits in Summerside, P.E.I.

17611. Sept. 28.—Authorizing C.P.R. to build its Swift Current northwesterly branch across 80 highways in Alberta, mileage 0 to 84.93.

17612. Sept. 26.—Authorizing C.P.R. to build extension to spur for R. Laidlaw & Co., Toronto.

17613. Sept. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 89.1 across public road.

17614. Sept. 28.—Amending order 17392, Aug. 30, re taking of G.T.R. lands by Campbellford, Lake Ontario and Western Ry. (C.P.R.) by changing Darlington tp. to Hope tp., Ont.

17615. Sept. 25.—Extending to Dec. 15 time within which G.T.P. shall complete bridge across Lachine road at Rockfield, Que.

17616. Sept. 26.—Authorizing Canadian Northern Ry. to build its Goose Lake extension between secs. 28 and 27, tp. 28, r. 6, w. 4 m.

17617. Sept. 25.—Approving G.T. Pacific Ry. station site at Miniota, Man.

17618. Sept. 25.—Dismissing G.T. Pacific Ry. application for authority to construct Y at mileage 29 west of Yellowhead pass.

17619. Sept. 25.—Ordering that joint freight rates to be charged by C.P.R., Canadian Northern Ry. and G.T. Pacific Ry. on lumber in carloads between Port Arthur and Port William, Ont., and points on G.T.P.R. Lake Superior branch of G.T.P. be no higher than 1c per 100 lbs. over G.T.P.R. rates between Westfort, Ont., and Lake Superior branch points.

17620. Sept. 26.—Authorizing Central Vermont Ry. to rebuild bridge across Yamaska river near Farnham, Que.

17621. Sept. 30.—Authorizing Bay of Quinte Ry. to revise grade across two highways in Portland tp., Ont.

17622. Sept. 30.—Authorizing Heaps Brick Co. to cross Western Canada Power Co.'s tracks at Ruskin, B.C.

17623, 17624. Oct. 1.—Defining express delivery and collection limits in Fredericton, N.B., and Rouleau, Sask.

17625. Sept. 26.—Authorizing C.N. Ontario Ry. to build across two highways at mileage 221.09 and 224.54, Ferris tp., Nipissing district.

17626. Oct. 2.—Authorizing Esquimalt and Nanaimo Ry. to build spur from near intersection of Telegraph and Store streets, southwesterly across same, and lot 125, Victoria, B.C.

17627. Sept. 23.—Authorizing C.N. Ontario Ry. to build bridge across Humber river, York tp., mileage 6.32 west of Toronto.

17628. Sept. 30.—Authorizing Canadian Northern Montreal Tunnel and Terminal Co. to carry its tracks across Jacques Cartier and Union Ry. near Jacques Cartier Jct., Que.

17629. Sept. 28.—Certifying correction on plan and book of reference of Sept. 12 of revised location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) across mill pond, Bowmanville, Ont.

17630. Oct. 2.—Authorizing C.P.R. to take 1,788 sq. ft. of certain lands for enlargement of its station grounds at St. Pie, Que.

17631. Oct. 2.—Authorizing C.P.R. to build extra track between sec. 3, tp. 15, and sec. 33, tp. 14, r. 15, w.p.m., at Neepawa, mileage 60.8 on Menedosa subdivision, Man.

17632. Sept. 25.—Authorizing Kingston and Pembroke Ry. to build spur for North American Smelting Co., Kingston, Ont.

17633. Oct. 2.—Authorizing Toronto Suburban Ry. to build under C.P.R. at Mimico river in lot 8, con. B, Etobicoke tp., Ont.

17634. Oct. 4.—Authorizing G.T.R. to rebuild four bridges; over Little Sable river, mileage 121.08; Hamilton creek, mileage 151.18; O'Grady's creek, mileage 153.28, and over stream, mileage 159.52, on Middle division, Ont.

17635. Sept. 27.—Authorizing Ottawa Electric Co. to erect its wires across C.P.R. at Carleton street.

17636. Oct. 1.—Approving location Toronto, Hamilton and Buffalo Ry. passenger station at Silverdale.

17637. Oct. 2.—Authorizing Alberta Interurban Ry. to build across C.P.R. Calgary-Edmonton branch overhead in sec. 13, tp. 24, r. 1, w. 5 m., South Alberta district.

17638. Oct. 4.—Approving C.N. Quebec Ry. plan of span to replace present timber trestle over Montreal Terminal Ry., Bout de L'Île, mileage 12 from Montreal.

17639. Sept. 26.—Authorizing C.N. Ontario Ry. to cross Algoma Eastern Ry. with its main line extension on lot 6, con. 4, McKim tp., Sudbury district.

17640. Oct. 3.—Extending to Dec. 15 time within which C.P.R. shall complete spur for American Lumber Co. at Sumas Jct., B.C.

17641. Oct. 4.—Approving C.P.R. plan showing replacement of double tracking of bridge 63.3 by 30 ft. deck plate girder span at Lac du Bonnet subdivision.

17642. Oct. 4.—Authorizing C.P.R. to build two spurs in block 1, Calgary, Alta.

17643. Oct. 3.—Approving location and type of G.T.R. station at Gobles, Ont.

17644, 17645. Oct. 4.—Authorizing G.T.R. to build branch for W. Gracey and Sons, and siding for Queen City Oil Co., Barrie, Ont.

17646. Oct. 3.—Authorizing G.T. Pacific Branch Lines Co. to carry traffic over its Regina-Boundary branch between Regina and Colfax, mileage 0 to 47.9, Sask.

17647. Oct. 4.—Authorizing city of St. Catharines, Ont., to build Berryman avenue across G.T.R. and Niagara, St. Catharines and Toronto Ry.

17648. Oct. 4.—Amending order 17405, Sept. 4, which required derricks to be placed on British Columbia Electric Ry., and interlocked with semaphores on Vancouver, Fraser Valley and Southern Ry. by providing that all interurban cars and cars operating on Nanaimo street be stopped before making the crossing at First avenue, Vancouver.

17649 to 17651. Oct. 3.—Authorizing Esquimalt and Nanaimo Ry. to build spurs for B.C. Pottery Co. Ltd.; J. E. Painter and Sons, and Sweeney Coppage Co., Victoria, B.C.

17652. Oct. 3.—Authorizing G.T.R. to build siding for the Bechtels Ltd., Waterloo tp., Ont.

17653. Oct. 3.—Authorizing C.P.R. to build spur for Canadian Western Natural Gas, Light, Heat and Power Co., Calgary, Alta.

17654, 17655. Oct. 4.—Ordering C.P.R. to place watchman at Stone road, Galt, Ont., between 7 a.m. and 6 p.m.; and to install automatic electric bell at Peterboro street, Norwood, Ont.

17656. Oct. 3.—Authorizing G.T.R. to rebuild bridge 39 on Middle division, 3.97 miles from Tavistock, Ont.

17657. Sept. 24.—Authorizing G.T. Pacific Ry. to build its Lake Superior branch across Port Arthur and Port William Electric Ry. at Syndicate avenue, Port William, Ont.

17658. Oct. 2.—Authorizing G.T. Pacific Branch Lines Co. to build its Brandon branch across six highways, mileage 13.9 to 18.2, Manitoba.

17659. Oct. 3.—Ordering G.T.R. to keep watchman during June, July, Aug. and Sept. at crossing of Georgian Bay and Seaboard Ry. (C.P.R.), at Tecumseh street, Orillia, Ont.

17660. Sept. 25.—Relieving G.T. Pacific Ry. from stopping its trains at King street, Entwistle, Alta., and from handling its freight traffic at sawmill siding.

17661. Oct. 3.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Scugog street, Bowmanville, Ont., mileage 149.2, crossing to be protected by gates.

17662. Sept. 3.—Authorizing G.T.R. to build spur for Battle Creek Toasted Corn Flake Co., London tp., Ont.

17663. Sept. 7.—Authorizing C.P.R. to build additional track under Clavet and Nelson streets and across Stephen street, Port Arthur, Ont., by extending overhead bridge.

17664. Oct. 7.—Authorizing C.P.R. to build its Bassano to Irricana branch across 15 highways from mileage 36.8, near Standard, to mileage 50.3, near Hussar, Alta.

17665. Oct. 4.—Approving proposed deviation of Nipissing Central Ry. between Cobalt and North Cobalt, Ont.

17666. Oct. 7.—Approving location Interprovincial and James Bay Ry. (C.P.R.) from mileage 0 to 10.11, through Geandreau and Mercier parishes, Que.

17667. Oct. 4.—Relieving Kingston and Pembroke Ry. (C.P.R.) from erecting fences along certain portions of its line.

17668. 17669. Oct. 7.—Authorizing G.T.R. to take certain lands in St. Antoine ward, Montreal; and ordering it to protect all shunting movements by sending a man ahead over switch with Central Ontario Ry. at subway leading from Murray tp. and Frankford to Trenton, Ont.

17670. Oct. 7.—Authorizing Algoma Eastern Ry. to build spur from mileage 9.08 through lot 9, con. 3, Snider tp., to the North Star mine.

17671. Oct. 7.—Authorizing C.P.R. to build three spurs for Sand and Supplies, Ltd., North Dumfries tp., Ont.

17672. Oct. 8.—Approving C.N. Alberta Ry. revised location through tp. 46, r. 1, w. 6 m., mileage 224.66 to 228.36.

17673. Oct. 8.—Approving Canadian Northern Ry. location through tns. 4-7, r. 1, e.p.m., Manitoba, mileage 0 to 19.08.

17674 to 17676. Oct. 7.—Authorizing C.N. Ontario Ry. to build across public road between lots 242 and 245 at station 1622-10, St. Eustache parish, Que.; to build across two highways on its Montreal-Port Arthur line in Ferris tp., Ont., and to build bridge across Ottawa river at Fitzroy harbor, mileage 37.32 west of Ottawa.

17677 17678. Oct. 7 9.—Authorizing G.T.R. to build siding for J. K. Kidd, Mount Bridges, Carleton place, and six additional sidings across Robert street, and public lane from Elgin street to Ferguson avenue, Hamilton, Ont.

17679. Oct. 8.—Approving revised location G.T. Pacific Branch Lines Co.'s Regina-Boundary branch from east line, sec. 11, tp. 7, r. 10, to east line, sec. 13, tn. 3, r. 4, w. 2 m., mileage 91.12 to 125.93, Cunningham district, Sask.

17680. Oct. 7.—Authorizing G.T.R. to build siding for Canada Pine Lumber Co., Bethune tp., Ont.

17681. Oct. 8.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across 20 highways from mileage 167.35 to 177.26.

17682. Oct. 9.—Authorizing G.T. Pacific Branch Lines Co. to build its Regina-Boundary branch across highway in n.e. ¼ sec. 11, tp. 17, r. 20, w. 2 m., at mileage 1.4, Assiniboia district, Sask.

17683. Oct. 7.—Approving location C.N. Ontario Ry. station grounds at mileage 69.83, Forrester Falls, Ross tp.

17684. Oct. 8.—Extending to Nov. 15 time within which G.T. Pacific Branch Lines Co. shall complete spur from Melville-Yorkton branch at Yorkton, Sask.

17685. Oct. 8.—Authorizing G.T. Pacific Branch Lines Co. to build Brandon branch across two highways, mileage 18.48 and 14.2, Brandon district, Man.

17686. Oct. 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 150.37 between lots 16 and 17, con. 1, Darlington tp., Ont.

17687. Oct. 9.—Approving C. N. Ontario Ry. location through Saltfleet tp., mileage 45.17 to 54.21.

17688. Oct. 5.—Ordering G.T.R. to protect West and Front streets, Orillia, Ont., by gates and watchmen.

17689. Oct. 10.—Authorizing C.P.R. to build spur for Consolidated Rubber Co., Winnipeg.

17690. Oct. 10.—Extending, to Dec. 31, time within which C.P.R. shall complete branch for British Columbia Brass, Ltd., New Westminster.

17691. Oct. 10.—Extending, to June 20, 1913, time within which C.P.R. shall complete spur for Provincial Reformatory, Guelph, Ont., as authorized by order 17075, July 19.

17692. Oct. 10.—Approving C.P.R. location

northeasterly from Bergen to lot 58, Kildonan parish, Man., 9.92 miles.

17693. Oct. 10.—Authorizing G.T.R. to build siding for Pratt & Letchworth Co., in Brantford, Ont.

17694. Oct. 10.—Amending order 15654, Dec. 16, 1911, to provide for interchange track, at Petrolia, Ont., between M.C.R. and G.T.R., within 15 days after conveyance of land for the purpose.

17695. Oct. 10.—Authorizing Montreal and Atlantic Ry. (C.P.R.) to build spur across Academy street, Sutton, Que.

17696. Oct. 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.), to cross G.T.R. overhead, near Shannonville station, Ont., mileage 69.25 from Glen Tay, without lowering G.T.R. tracks.

17697. Oct. 10.—Ordering G.T.R. to protect Ottawa street, Hamilton, Ont., by watchman, between 7 a.m. and 7 p.m., in addition to bell already installed.

17698. Oct. 10.—Authorizing Canadian Northern Ry. to build spur, from mileage 0 to 0.80, on main line, to connect with transfer yard west of Dawson road, St. Boniface, Man.

17699. Oct. 9.—Ordering C.P.R. to make grade on south side of track at crossing on lot 18, con. 7, Peel tp., mileage 27.07, ¼ mile west of Wallenstein station, 1 in 20; to be completed by Oct. 31.

17700. Oct. 9.—Authorizing G.T.R. to build additional track across Richmond street, Strathroy, Ont.

17701. Oct. 8.—Authorizing G.T.R. to build siding for proposed hospital for insane, at Whithy, Ont.

17702. Sept. 26.—Authorizing C.P.R. to cross highway overhead between cons. 4 and 5, Ops tp., Ont.

17703. Oct. 9.—Authorizing Toronto Suburban Ry. to cross under C.P.R. on lot 12, con. 3, Toronto tp., Ont.

17704. Oct. 9.—Authorizing Louth tp., Ont., to build highway across G.T.R., between lots 22 and 23.

17705. Oct. 9.—Ordering G.T.R. to cut down trees and reduce clay banks obstructing view of highway crossing one mile north of Burke Falls, Ont.

17706. Oct. 12.—Authorizing G.T. Pacific Ry. to carry traffic over its Regina-Boundary branch, between Colfax, mileage 47.9, and Talmage, mileage 66.5, Sask.

17707. Oct. 11.—Authorizing G.T.R. to rebuild bridge carrying Victoria avenue across its tracks Niagara Falls, Ont.

17708. Oct. 8.—Authorizing diversion of highway immediately west of G.T.R. station at Thornton, Ont.

17709. Oct. 9.—Approving location and detail plans of new G.T.R. station at Sunnyside, Toronto.

17710. Oct. 8.—Ordering G.T.R. to reduce, to 4 ft., height of cedar hedge, and right of way fence, along n.e. side of highway near Thornton station, Ont.

17711. Oct. 11.—Authorizing G.T.R. to rebuild bridge 75, mileage 8.21, over Grand river, Brantford, Ont.

17712. Oct. 4.—Amending order 17230, Aug. 14, re operation of Mount McKay and Kakabeka Falls Ry. over C.P.R., at Neebing avenue, Port William, Ont., by removing restriction as to using steam as motive power.

17713. Oct. 11.—Authorizing C.P.R. to build spur for Ontario Rock Co., Belmont tp., Ont.

17714. Oct. 11.—Authorizing C.P.R. to build two spurs for Purmal Brick Co., Medicine Hat, Alta.

17715. Oct. 10.—Approving C.P.R. plan, June 21, showing changes to be made in electric bell protection at Main street, Carleton Place, Ont.

17716. Oct. 11.—Authorizing C.P.R. to build spur for Moffat Store Co., Weston, Ont.

17717 to 17720. Oct. 10, 11.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.), to build bridge at mileage 30.9, Hinchinbrooke tp., overhead crossing, at mileage 130.78 Port Hone tp.; bridge 133.90, Hone tp., and bridge at mileage 41.45, Camden tp., Ont.

17721. Oct. 10.—Relieving C.N. Ontario Ry. from providing further protection at highway crossing just south of Brechin.

17722. Oct. 4.—Amending order 17231, Aug. 14, re operation of Mount McKay and Kakabeka Falls Ry. over G.T. Pacific Ry. at Neebing avenue, Port William, Ont., by removing restriction as to using steam as motive power.

17723. Oct. 8.—Authorizing Toronto Suburban Ry. to cross under G.T.R. on lot 19, con. 8, Eanesing tp., Ont.

17724. Oct. 12.—Approving Toronto Eastern Ry. revised location, on Bond street, Oshawa, Ont.

17725 17726. Oct. 11.—Authorizing Walkerville Water Co. to lay water pipe under Essex Terminal Ry. at Argyle road, and Lake Erie and Detroit River Ry. (Pare Marquette Rd.), at Edna street, Walkerville, Ont.

17727. Oct. 9.—Approving Niagara, St. Catharines and Toronto Ry. location, through Louth and Clinton tps., Ont., mileage 0 to 10.59.

17728. Oct. 12.—Authorizing G.T. Pacific Ry. to carry traffic over its Alberta coal branch from mileage 0 to 36.6.

17729. Oct. 11.—Authorizing C.P.R. to build spur to Alberta Foundry and Machine Co., Medicine Hat, Alta.

17730. Oct. 12.—Approving revision in line and grade of portion of C.P.R. Sudbury-Sault Ste. Marie branch, from mileage 7.42 to 8.39 (Webbwood section), Waters tp., Ont.

17731, 17732. Oct. 9.—Authorizing city of Hamilton, Ont., to extend Birmingham street across Toronto, Hamilton and Buffalo Rys., and G.T.R., in lot 7, con. 1, Barton tp., now portion of the city.

17733. Oct. 12.—Temporarily approving G.T.R. freight mileage tariff, C.R.C. 11, between and including Prince Rupert and South Hazelton, B.C.

17734. Oct. 12.—Authorizing G.T. Pacific Branch Lines Co. to build additional spurs from its Alberta coal branch for Macleod Collieries.

17735. Oct. 11.—Authorizing C.P.R. to build spur for York Shaw, Calgary, Alta.

17736. Oct. 12.—Extending to Nov. 30, time within which C.P.R. shall build spur for M. Rumely Co., Saskatoon, Sask.

17737. Oct. 11.—Approving proposed location of C.P.R. station at Innerkip, Ont.

17738. Oct. 8.—Authorizing C.N. Ontario Ry. to take portion of lot 15, con. 4, Nepean tp., for carrying out diversion, as approved by order 13701.

17739. Oct. 4.—Authorizing C.N. Ontario Ry. to build across Bridge street, Yarker.

17740. Oct. 11.—Amending order 17281, Aug. 13, re C.P.R. spur east of Nesbing avenue, Port William, Ont.

17741. Oct. 11.—Authorizing C.P.R. to build spur for J. T. Hepburn Co., Toronto.

17742. Oct. 14.—Approving proposed location of C.P.R. station at Husaar, Alta.

17743, 17744. Oct. 14.—Authorizing C.P.R. to construct spurs for Tregillus Clay Products Co., Shaganappi, Alta., and Bishopric Wall-board Co., Junction Gore, Ottawa, Ont.

17745, 17746. Oct. 14.—Extending, for six months, time within which Esquimalt and Nanaimo Ry. shall file standard tariff of maximum freight tolls for approval, and authorizing it to build spur for Shawinigan Lake Lumber Co., Victoria, B.C.

17747. Oct. 14.—Authorizing C.N. Ontario Ry. to build across and divert public road, lot 4, Bristol tp., Que.

17748. Oct. 14.—Approving Canadian Northern Ry. plans standard no. 6 station, for its eastern lines.

17749. Oct. 15.—Approving location of C. N. Ontario Ry. station grounds at Bristol corners, Que.

17750. Oct. 14.—Approving by-law authorizing W. McNeill to prepare and issue Western Canada Power Co. tariffs of tolls.

17751 17752. Oct. 16.—Authorizing G.T.R. to rebuild bridge 15, to mileage 22.73, across Welland canal, near St. Catharines, and bridge 45, mileage 76.83, over Huron road, between North and South Easthope tns., Ont.

17753. Oct. 11.—Ordering G.T.R. to maintain electric bell at crossing just east of Jordan station, Ont.

17754. Oct. 15.—Extending to June 15, 1913, time within which Dominion Atlantic Ry. should complete bridge across Shubenacadie river at South Maitland, N.S.

17755. Oct. 16.—Authorizing C.P.R. to build branch across road allowance at south end of sec. 30, tp. 16, r. 5, w. 2 m., Sask.

17756. Oct. 16.—Relieving G.T.R. from providing further protection at crossing on Trolley street, Hamilton, Ont.

17757. Oct. 14.—Approving C.N. Quebec Ry. location through Arundel, Ponsenby and Amherst tns., mileage 0 to 12.41.

17758. Oct. 14.—Authorizing G.T. Pacific Branch Lines Co. to build its Brandon branch across highway between secs. 17 and 18, tp. 10, r. 18, w.p.m., Man.

17759. Oct. 14.—Authorizing C.N. Ontario Ry. to build across Laughton avenue overhead, in Toronto.

17760. Oct. 14.—Authorizing Canadian Northern Ry. to build its Morris to Portage branch across 25 highways in Manitoba.

17761. Oct. 17.—Authorizing C.P.R. to build spurs for city of Medicine Hat, Alta., and for Medicine Hat Pottery Co.

17762. Oct. 14.—Ordering Hamilton Radial Ry. to build farm crossings for J. B. Leonard and W. J. Copp, Nelson tp., Ont.

17763. Oct. 16.—Authorizing Lachine, Jacques Cartier and Maisonneuve Ry. (G.T.R.) to build bridges across Ontario, Forsyth, Hochelaga, Sherbrooke, Bercy, Hogan and Masson streets, Cote de la Visitation, Iberville; De Fleurance street, Cote St. Michel road, Bagg Ave., Sault au Recollet road, St. Denis and St. Lawrence boulevards, Montreal.

17764. Oct. 16.—Authorizing Canadian Northern Ry. to build across 15 highways on its Calgary southerly branch.

17765. Oct. 16.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across forced road overhead, in lot 15, con. 7, Camden tp., mileage 48.7 from Glen Tay, Ont.

17766, 17767. Oct. 16.—Authorizing C.P.R.

to build spurs for Great Western Lumber Co., Red Deer, Alta., and Dodge Manufacturing Co., West Toronto, Ont.

17768. Oct. 16.—Authorizing C.P.R. to open for traffic its second main line between Adirondack Jct. and St. Constant, Que., about 4.70 miles.

17769. Oct. 14.—Authorizing G.T. Pacific Ry. to carry traffic over its line in British Columbia, between mileage 164 and 176.8, east of Prince Rupert.

17770. Oct. 16.—Authorizing G.T. Pacific Ry. to build spur for city of Edmonton yards, Alta.

17771. Oct. 16.—Certifying corrections in location plan of G.T. Pacific Branch Lines Co., Tofield-Calgary branch, from sec. 21, tp. 29, r. 24, w. 4 m., to sec. 1, tp. 23, r. 1, w. 5 m., Alta., mileage 150 to 198, as approved by order 10662.

17772. Oct. 16.—Authorizing G.T.R. to build siding for Massey-Harris Co., Toronto.

17773. Oct. 14.—Authorizing Esquimaux and Nanaimo Ry. to build spur for D. McKenzie, Victoria, B.C.

17774. Oct. 15.—Authorizing Barton tp., and Hamilton City and Suburban Homes, Ltd., to build Rosedale avenue, at grade, across T.H. & B. Ry.

17775. Oct. 17.—Authorizing C.P.R. to build bridges 24.2 and 24.1, over Otonabee river, Toronto subdivision.

17776. Oct. 16.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge at mileage 130.21 across road allowance between lots 18 and 19, con. 2, Hope tp., Ont.

17777. Oct. 16.—Authorizing C.N. Alberta Ry. to build under G.T.P.R., in n.e. $\frac{1}{4}$ sec. 15, tp. 46, r. 1, w. 6 m.

17778. Oct. 17.—Authorizing Canadian Northern Ry. to build its Prince Albert-Battleford line across four highways in Saskatchewan.

17779. Oct. 17.—Authorizing C.N. Quebec Ry. to build across public road in St. Eustache.

17780. Oct. 17.—Authorizing G.T. Pacific Ry. to carry traffic on its Moose Jaw branch between Regina and Moose Jaw, mileage 0 to 34.7.

17781. Oct. 16.—Extending time for G.T.R. to restore proportion, viz., 88c. a ton, of joint rate of \$1.60 a ton, on pressed brick from Bradford, Pa., to Windsor, Ont., as required by order 17552. Sept. 21.

17782, 17783. Oct. 17.—Authorizing C.N. Ontario Ry. to build across public road between cons. 3 and 4, March tp., and overhead across St. Lawrence Boulevard and St. Denis Boulevard, Montreal.

17784. Oct. 17.—Authorizing Nelson and Fort Sheppard Ry. (G.N.R.) to take up spur at Tamarack station, B.C.

17785. Oct. 17.—Extending to July 1, 1913, time within which C.P.R. shall complete branch for Crushed Stone and Gravel, Ltd., authorized by order 16981.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

C.P.R. STANDARD FREIGHT MILEAGE TARIFF.

17270. Aug. 23. Re application of C.P.R. Co. for approval of a standard freight mileage tariff to be designated as C.R.C. no. W. 1758 to comply with sec. 327 of the Railway Act. It is ordered that the said tariff between the company's stations in Alberta and British Columbia, between Canmore, Alta., and Vancouver, B.C., including its Arrow Lake, Mission and Westminster branches, be temporarily approved pending judgment in the inquiry by the Board into the rates charged generally in British Columbia; provided that in the meantime no increases shall be made in the rates of any special freight tariff of class rates within the territorial limits of the said standard freight mileage tariff, and that no rates shall be increased because of this order.

BRICK RATES, BRADFORD, PA., TO WINDSOR, ONT.

17552. Sept. 21. Re application of Cadwell Sand and Gravel Co., Ltd., of Windsor, Ont., complaining of increased rate on pressed brick from Bradford, Pennsylvania, to Windsor, Ontario, from \$1.60 to \$2 a ton. Upon hearing the application at Toronto, on April 30, the applicants and the Canadian Freight Association being represented; and upon its appearing that the G.T.R. will re-

ceive an additional 32c. per ton as its proportion of the increased rate to \$2 a ton—it is ordered that the proportion, viz., 88c. per ton, which accrued to the G.T.R. as its percentage division of the joint rate of \$1.60 a ton charged from Bradford, Pa., to Windsor, Ont., prior to April 20, be restored by the G.T.R., within 45 days from the date of this order, as a proportional rate from Buffalo to Windsor, and as the maximum proportional to intermediate G.T.R. points, limited to brick shipped from Bradford and Bradford rate points destined to Windsor and the said intermediate points.

Order 17781. Oct. 16.—Postponed the effective date of the above order 17552.

CRUSHED STONE FREIGHT RATES.

17493. Sept. 16.—Re application of Power City Stone Co., Ltd., of Niagara Falls, Ont., complaining of change proposed by Michigan Central Rd. in rate of crushed stone from the applicants' quarry, Niagara Falls, to Toronto, under supplement 10 to its Joint Commodity Tariff C.R.C. 1743; and applying for an order disallowing or suspending said tariff: It is ordered that the said proposed supplement shall not come into force, pending a hearing and disposition of the application by the Board.

LUMBER RATES FROM PORT ARTHUR, ONT.

17619. Sept. 25.—Re application of Vigers-Sheer Lumber Co., Ltd., of Port Arthur, Ont., complaining that it is unjustly discriminated against in the matter of carload traffic to or from Grand Trunk Pacific Ry. points which is interswitched by the Canadian Pacific and Canadian Northern Railways between Westfort and Port Arthur, Ont.: It is ordered that the joint freight rates to be charged by the C.P.R., the Canadian Northern Ry. and the G.T. Pacific Ry. on lumber, in carloads, between Port Arthur and Fort William and points on the G.T.P.R. Lake Superior branch be not higher than 1 cent per 100 lbs. over and above the G.T.P.R. rates between Westfort and Lake Superior branch points: the tariff, or tariffs, to comply with this order, to become effective not later than 21 days from the date hereof.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened waybill offices at Ardath and Avonlea, Sask.

The Canadian Northern Ex. Co. has opened offices at Morrin, Alta.; Berton, Man., and Forward, Sask.

L. C. Goodge has been appointed agent, Dominion Ex. Co., Yarmouth, N.S., vice A. Steves, deceased.

C. A. Roach, heretofore stationed at Cornwall, Ont., has been appointed route agent, Canadian Ex. Co., with headquarters at Montreal.

A Steves, agent, Dominion Express Co., Yarmouth, N.S., was killed at Hartford, near Yarmouth, Oct. 16, when his automobile turned over. He was accompanied by

W. F. Branscombe, route agent, Dominion Ex. Co., St. John, N.B., who escaped injury.

N. J. Ross, Superintendent, Canadian Ex. Co., was in Prince Rupert, B.C., during October, for the purpose of looking over the ground with a view to the inauguration of the company's express system from that city to interior points along the G.T. Pacific Ry.

The Board of Railway Commissioners has ordered that the express delivery and collection limits in Summerside, P.E.I., be those enclosed by Water street, from Clarks brook to East street, East, Ottawa, Granville, Green and Centre streets, Hawthorne avenue, Duke, North Market and Northumberland streets, to the water front; of Fredericton, N.B., enclosed by River street, John street, between Lansdowne street and Odell avenue, Waterloo row, from south end of Ketchums bridge, Lansdowne street, University avenue, C.P.R. to station, Victoria street, from Carleton street, Smythe and Saunders streets, and Odell avenue to the river; and of Rouleau, Sask., enclosed by Wetmore street, from Railway avenue, Knox avenue, Brownlee street and Railway avenue to starting point.

The Canadian Ex. Co. has had built five electric trucks for city service in Montreal to take the place of horse drawn wagons. Three of them are of two tons capacity each, the others of one ton each. They have a speed of from 10 to 12 miles an hour, which is more than double the efficiency of the old horse wagon, and will travel for 45 miles on a single charge. The large vehicles are 166 ins. long overall and 76 ins. wide. The others are 149 ins. long and 72 ins. wide. Horses often require the attention of more than one driver. They can only cover a limited amount of ground in a day. Their care and feeding is costly. Large stables must be maintained in convenient proximity to the railway station, where real estate values are often at their highest. In the search for improved methods the Canadian Ex. Co. was led to a choice between gas and electricity as the motive power. Inquiry from similar concerns in the United States, where both had been tried, and careful investigation decided the latter as the better field for experiment on account of its perfect simplicity of mechanical parts, which means fewer repairs and less attention; of its perfect ease of control, which allows any intelligent horse driver to run an electric; of the absence of fire risk; and of economy from the fact that power is not consumed when the vehicle is not in operation. The introduction of these cars is largely in the nature of an experiment, but if the results that are hoped for can be obtained it is probable that the horse will be largely, though gradually, superseded. Climatic conditions are more favorable to the south, but while it is a little doubtful if the electric can be operated in Montreal the year round there is no reason why this should not be done in Toronto. Owing to the batteries, which are suspended from the floor of the trucks, these can only pass over well beaten roads where snow drifts have to be encountered, but even in Montreal it should be possible to use them during more than seven months out of the twelve. Charging the motors is a somewhat lengthy operation, but this can be done at night so that no time is lost. The Canadian Ex. Co. is installing its own charging plant at the stables in Montreal, which must now serve as a garage.

Attention is called, by the Winnipeg Free Press, to the fact that on Oct. 9, 1877, the steamboat Selkirk arrived in Winnipeg with the first locomotive to reach the Canadian prairies.

Electric Railway Department.

Straightening Motor Axles at London Street Railway Shops.

A convenient means of straightening motor axles that have accidentally become bent, without the necessity of removal from the lathe when placed therein for turning, is in use in the London (Ont.) St. Ry. shops, R. H. Welburn, Master Mechanic. It often occurs that the axle may have become slightly bent in service, maybe to a degree that would not be noticed until placed in the lathe. To remove from the lathe and straighten, under any of the usual methods, and then insert in the lathe to determine if sufficient bend has been given to the shaft, is at the best a slow task, and one that is fatiguing to the operator.

In the method used in the London shops, the bending attachment can be applied directly to the axle as mounted between the lathe centres for turning. Two arms,

shaft tested for correctness by loosening up the screw and allowing the attachment to hang down on the side of the lathe while the axle is revolved on the centres, and the eccentricity, if any, determined preparatory to another application of the press.

Disposition of Lost Articles by Toronto Railway Company.

The Ontario Railway and Municipal Board gave the following judgment Sep. 28:—

This is an application made by the city to the Board to prescribe the method of dealing with articles, which may be left upon the company's cars by the travelling public. The company, some years ago, when articles were left on the cars, adopted the practice of sending them to its head office at the corner of King and Church streets. The number of articles which the

reasonable and improper, and without suggesting any other method in their application, ask that this Board should prescribe the way in which these articles should be dealt with by the company. It was suggested at the hearing, by the city, that the company should provide a building in the down town district, in the neighborhood of the loop on Scott street and fit it up for the reception of lost articles and provide the clerical or other assistance necessary to handle them. It appears in the evidence that in the last year over 13,000 lost articles have been taken care of by the company. Of these about 7,000 were claimed and restored to the owners.

The franchise agreement between the city and the company makes no provision for the care and disposal of lost articles. The only provision in reference to property left on the cars, is contained in sec. 215 of the Ontario Railway Act, of 1906. This section provides that "It shall be the duty of every street railway company, which shall have unclaimed property left in its cars, to ascertain, if possible, the owner or owners of such property, and to notify such owner or owners of the fact by mail as soon as possible after such property comes into their possession. Every such company which shall have such property, not perishable, in its possession for a period of three months, may sell the same at public auction, after giving notice to that effect, by one publication, at least 10 days prior to the sale, in a daily newspaper published in the city or town in which such sale is to take place, of the time and place at which such sale will be held, and such sale may be adjourned from time to time until all articles offered for sale are sold. All perishable property so left may be sold by any such street railway company without notice, as soon as it can be, upon the best terms that can be obtained."

It will be observed that the duty of the company under this section, is to ascertain, if possible, the owner or owners and notify them by mail. It would scarcely be possible to notify the owners, unless the lost articles had upon them an address or some means for the identification of the owner. The city relies on the Ontario Railway and Municipal Board Amendment Act, 1910, 10 Edw. VII., cap. 83, sec. 7, which provides that the act shall be read with and as part of the Ontario Railway and Municipal Board Act, 1906, and secs. 2, 3, 5 and 6 of the act shall apply to street railways as well as other railways. It will be observed that the act, 10 Edw. VII., cap. 83, is an amendment to the Ontario Railway and Municipal Board Act of 1906, not to the Ontario Railway Act of 1906. That act, 10 Edw. VII., empowers the Board to determine the just, reasonable, safe, proper and adequate regulations, practices, equipment, appliances or service to be observed and to be used in the transportation of passengers, freight and property. It does not extend to the care of property left on the cars. It only applies to transportation. The Board is of opinion that it has no power or jurisdiction under the Ontario Railway and Municipal Board Amendment Act of 1910 to declare that the practice adopted by the company in the care of articles left on the cars is unjust, unreasonable and improper, and to prescribe some other method of caring for them and restoring them to the owners. The application is dismissed, but without costs, except that the city shall pay \$20 for stamps on the formal order.

Press Attachment for Straightening Motor Axles Directly in the Lathe.

bored $2\frac{3}{4}$ ins. diameter at the lower end, the diameter of the standard axle in use on that system, are slipped on to the axle, the latter passing through these holes. Centering 11 ins. out on these arms, there is a 2 x 4 in. opening for the reception of a crossbar of the same dimensions. This crossbar is built up from two 1 in. slabs, rivetted together. These slab pieces encircle at the centre a square threaded nut, through which passes a square threaded screw, 2 ins. in diameter and 14 ins. long. This bears down at the lower end on a V block resting on the bent part of the shaft.

When the bend occurs at a point where the outer arm must be near the end of the shaft, there is a taper collar of the same outside diameter as that of the shaft, to fit over the taper pinion end. The bending attachment can thus be moved to any position, with the arms close together, or at the maximum distance apart, as the nature of the bend requires.

A set can be given to the shaft, and the

company were called upon to take care of became so large, and so much time was taken up by claimants making enquiries at the office, identifying their property, and resuming possession of it, that the conductors returning their fare boxes were very much inconvenienced and delayed. The service was so affected that the company found it expedient some time ago to direct each conductor to take the articles in the first place to the car barns at the end of his run, where they were left along with a memorandum giving particulars of where they were found. They were then gathered together and sent by car to the barn on Lansdowne avenue. The company there provided a room for storing them and a clerk to examine, label and put them in racks, so that they could be identified and returned to the owners when they applied for them. A telephone is maintained for the convenience of persons making enquiries. The city says that this practice, in dealing with lost articles, is unjust, un-

Halifax Electric Tramway Co.

For some time past it has been reported that a change in the control of the company was impending, and on Oct. 8 it was semi-officially announced in Halifax that the control of the company had passed into the hands of a syndicate of Montreal financiers headed by E. A. Robert, President Montreal Tramways Co. The report further stated that the new interests will develop a water power close to Halifax, and that the H.E.T. Co. will be the principal user of the power generated. It is said that there is no intention to transfer the offices from Halifax to Montreal.

The Nova Scotia Legislature at its last session passed an act respecting the exclusive franchise granted the Halifax Electric Tramway Co. and the city of Halifax. The reasons for passing the act are set out in the preamble from which it appears that the existing franchise will expire in 1916; and that negotiations had taken place between a majority of the directors and the city council as to terms, which negotiations had not been submitted for the shareholders' approval. It was considered desirable to postpone approval of such negotiations to maintain the existing contract or franchise, and to provide that no disposition shall be made of the company's undertakings while the present act is in force.

The act provides that the exclusive franchise granted the company by the statutes of 1895 be extended 21 years on the same terms so far as taxes and contributions to the city are concerned. The charges for fares, electric current and gas are made subject to the Public Utilities Board; and the net profits of the company are to be divided as follows:—A dividend to stockholders not to exceed 8%; a fund for the extension and improvement of the property to be created by the setting aside of an amount up to a 4% dividend on the common stock, and any balance to be equally divided between the company and the city. These sections of the act are to become operative on a date to be fixed by proclamation. The act also provides that the directors are to report at the next annual meeting of shareholders the progress of negotiations with the city council for the purpose of securing an expression of their views upon the same.

There is to be no increase in the amount of bonds or debentures issued beyond the present amount of \$600,000 of 5% first mortgage bonds, and no second mortgage or other charge is to be placed upon the property, except such as may be given to secure the existing bond issue or any renewal of the same. The capital stock is not to be increased beyond the present amount of \$1,500,000, and no stock is to be granted preferential rights. The company is not to dispose of its property in whole or in part, and it is not to enter into agreements or contracts with other companies for the purchase of hydro-electric power, or any water power, for the purposes of the company. The company's power to pay dividends is limited to 8%; all outstanding proxies are declared to be void, and any company having similar objects to the H.E.T. Co., holding any of its shares is declared to be incapable of voting either in person or by proxy, at any of the company's meetings. This part came into force May 3, the date of the passing of the act, and is to remain in force until May 3, 1913, unless sooner repealed.

At a meeting of the laws and privileges committee of the Halifax, N.S., city council, Oct. 7, a resolution was adopted that the city solicitor be instructed to propose legislation which would serve to prevent a

possible removal of the Halifax Electric Tramway Co.'s head office to Montreal. It was stated that it had been ascertained that the control of the company had shifted from Halifax to Montreal, and it was feared that the head office would follow, which would make it inconvenient for the inspection of the books by the authorities. The city receives 4% of the gross receipts of the street railway, and 2% of the gross receipts of the power plant.

Commutator Slotting Rig at Levis County Railway Shops.

The Levis County Ry. shops at Levis, Que., are small, as the number of cars operated is so few that the capacity for repair need not be very large. In common with other small shops similarly situated, the equipment is not very large, calling for the exercise of a good deal of native ingenuity in the repair of the rolling stock, and the maintaining of it in good condition under the heavy conditions of operation to which

Rig for Slotting Commutators to Remove Mica Fins.

cars in a hilly town like Levis are subjected.

From this latter cause, burnt out motors are of more or less frequent occurrence, although this difficulty has of late been materially minimized by the use on all cars of a regulator to prevent an overcharge of current to the motor when starting under heavy load as on a hill. The method of putting such motors again in condition by rewinding was described in a previous issue.

The wearing down of the commutator on a motor is a condition with which all roads have to contend. Not only is the wear uneven at different points on the circumference, but the greatest trouble arises from the fact that the copper segments wear down more rapidly than the separating layers of mica, leaving the outer edges of the latter projecting out beyond the metal. A simple rig, which is shown in the accompanying illustration, has been built up in these shops to remove these projecting fins.

A wooden framework is supported from bearings on the shop line shaft, the bearings allowing the frame to hang freely on the revolving shaft, and also permit of swing of the lower end. On this lower end there is a small shaft, carrying at one end

a thin saw cutter. A large pulley on the line shaft drives the small shaft at a high speed through a belt on the frame passing over a small pulley of the small shaft.

The armature, with the commutator ring to be slotted, is mounted horizontally in V grooves between two horses, directly under the path of the saw, and at the requisite height to cause the cutter to form a shallow slot in the mica insulation between the commutator segments. The operator holds the commutator in position on the horses with one hand, and with the other swings the cutter frame along the length of the slot, repeating this operation for all the slots. The arc through which the frame swings is so small that the resulting groove is to all purposes level, and for the purpose required is amply accurate.

The whole time required to mount and slot a complete commutator is only about 10 minutes. This is accomplished on a machine that complete only cost in the neighborhood of \$12 to build. There are other uses to which the machine is put to advantage, principal among them being that of sawing up wood and similar operations.

Regina Municipal Railway Construction, Equipment, Operation, Etc.

This railway, which commenced operation July 29, 1911, built during that year 10½ miles of single track and operated six single truck cars, the approximate expenditure being \$500,000. During the present year a further three miles have been constructed, and 14 cars have been added, the additional approximate expenditure being \$250,000. The construction which has been sanctioned for 1913 consists of 18 miles of single track, and the purchase of 12 double truck cars, six single truck cars, one additional snow plough, 12 gravel dump cars, 18 garbage cars, four construction flat cars, and one construction motor car, at an approximate expenditure, including cost of pavement between tracks, of \$700,000. It is proposed to call for tenders for all the material required for the 1913 work, during January, to enable track construction to be commenced as soon as the frost is out of the ground.

The following orders have recently been placed,—Eight 28 ft. car bodies with pay-as-you-enter rear vestibules, at a cost of \$31,272, with the Preston Car and Coach Co.; four quadruple 101B motor equipments and eight sets straight air brake equipment, at a cost of \$11,856, with the Canadian Westinghouse Co., four quadruple G.E. 80A motor equipments, at a cost of \$9,400, with the Canadian General Electric Co., and eight sets 27G1 trucks, all steel rolled wheels, at a cost of \$7,360. Each car delivered f.o.b. Regina, will cost \$7,481.

Following is the general specification of the cars:—

Length of car body	28 ft.
Length of front vestibule	5 ft.
Length of rear vestibule	7 ft.
Length of car over buffers	41 ft.
Width of car	8½ ft.
Truck wheels, diam.	33 ins.
Width of tread	2½ ins.
Width of flange	¾ in.
Depth of flange	¾ in.
Axles, diam.	4½ ins.
Gauge	4 ft. 8½ ins.

The passenger returns to Aug. 31, show number of passengers carried, 1,760,969; revenue received, \$81,955.45. The average weekly operation shows, 53,000 passengers carried, and a revenue of \$2,300. There is an average of 12 cars now in operation, and by the end of the year it is anticipated that 20 cars will be running. The railway is showing a satisfactory net profit above operation charges, and all fixed charges against capital expenditure. H. Doughty is Superintendent.

Canadian Street Railway Association's Annual Meeting.

The annual meeting of this Association was held at London, Ont., Oct. 4 and 5, there being a good attendance of representatives of member companies from the various provinces. The President, James Anderson, General Manager Sandwich, Windsor & Amherstburg Ry. occupied the chair.

The Secretary-Treasurer, Acton Burrows, presented a very complete report dealing in detail with the Association's work during the year, referring to Dominion and Pro-

P232 Patrick Dubee,
President, Canadian Street Railway Association.

vincial legislation affecting electric railways, the actions of the Boards of Railway Commissioners and the various provincial utility commissions, operating rules for electric railways, and a number of other important topics, including information on a variety of subjects which had been gathered at the request of certain member companies and distributed to the entire membership. The report was discussed section by section and action was taken on a number of the subjects brought up.

Papers were read on several subjects, including telephone train dispatching, automatic railway dispatching and signalling, the evolution of the electric railway car, track construction, the use of T rails, etc., etc. There were also a number of topical discussions on other subjects of vital interest to electric railway interests and which had been suggested by officials of member companies.

The election of officers resulted unanimously as follows:—President, Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.; Vice President, C. B. King, Manager London St. Ry.; Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World.

Executive Committee:—Jas. Anderson, General Manager, Sandwich, Windsor & Amherstburg Ry.; E. P. Coleman, General Manager, Dominion Power and Transmission Co.; J. D. Fraser, Secretary-Treasurer, Ottawa Electric Ry.; H. M. Hopper, General Manager and Purchasing Agent, St. John Ry.; J. E. Hutcheson, General Manager Montreal Tramway Co.; Wilson

Phillips, Superintendent Winnipeg Electric Ry.

Assistant Secretary, Aubrey Acton Burrows, Secretary and Business Manager, Canadian Railway and Marine World.

The officers attending the meeting were most hospitably entertained by C. B. King, Manager London St. Ry., who gave a dinner and also a theatre party for them. After the conclusion of the business on Oct. 5, the party were taken by special car over the London & Lake Erie Ry. and Transportation Co.'s line from London to Port Stanley, on the invitation of the General Manager, S. W. Mower, and were given every opportunity of thoroughly inspecting that up to date interurban line, one of the most interesting features of which is the operation of four car trains during the busy summer.

Inquiry Into Montreal Tramway Company's Service.

The Quebec Public Utilities Commission has decided to make an enquiry into the Montreal Tramway Co.'s service in Montreal and contiguous municipalities, to determine (a) whether the Commission's directions respecting the prevention of accidents and the lessening of danger from the operation of cars, as issued on Nov. 18, 1910, and amendments thereto are being complied with; (b) whether the Company is or is not providing such equipment and operation of its service as are required for the safety and convenience of the public and for the proper carrying out of any contract, charter or franchise granted to or controlled by it, whereby the use of public property or rights is involved; (c) should there appear to be defects and deficiencies in any of the matters involved in such equipment or operation, or the means of carrying out or exercising such contract and franchise, what may or should be done to remedy the same; and (d) to obtain full and complete information upon all matters directly or indirectly involved in the foregoing inquiry, and to deal therewith, so far as the Commission's jurisdiction may lie.

The Quebec Public Utilities Commission has directed the Montreal Tramways Co. to produce before it all information concerning the company and its subsidiary lines. The information called for includes everything relating to the operation of the lines during the past two years. The city of Montreal is also called upon to produce all information in its possession with respect to the company and its relations to the city.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Aug., \$553,148; operating expenses, \$343,979; net operating earnings, \$209,169; renewal funds, \$51,620; net earnings, \$157,549; approximate income from investments, \$35,000; net income, \$192,549, against \$436,520 gross earnings; \$278,513 operating expenses; \$158,007 net operating earnings; \$37,935 renewal funds; \$120,072 net earnings; \$25,000 approximate income from investments; \$145,072 net income for August, 1911. Aggregate gross earnings for two months ended Aug. 31, \$1,091,988; net earnings, \$381,842, against \$845,850 aggregate gross earnings; \$283,125 net earnings, for same period 1911.

Cape Breton Electric Co.—Gross earnings for Aug., \$31,598.38; operating expenses and taxes, \$16,100.77; net earnings, \$15,497.61; interest charges, \$4,495.83; balance, \$11,001.78; sinking and improvement funds, \$1,206.67; balance for reserves, etc., \$9,795.11, against \$28,933.97 gross earnings; \$15,556.89 operating expenses and taxes; \$14,

277.08 net earnings; \$4,512.50 interest charges; \$9,764.58 balance; \$1,140 sinking and improvement funds; \$8,624.58 balance for reserves, etc., for Aug., 1911. Construction charges for Aug., \$770.57.

Oshawa Ry.—The annual meeting was held at Deseronto, Ont., Sept. 30. Following are the officers and directors for the current year:—President, E. W. Rathbun, Deseronto; Manager, J. F. Chapman, Gananoque, Ont.; Secretary and Treasurer, H. W. Cooper, Gananoque; other directors, B. R. Hepburn, M.P., and D. A. Valteau.

Quebec Ry., Light and Power Co.—Gross earnings for August, \$163,882; operating expenses, \$79,479; net earnings, \$84,402, against \$150,652 gross earnings; \$66,196 operating expenses; \$84,455 net earnings for Aug., 1911.

Regina Municipal Ry.—Passenger earnings for Aug., \$10,135.50; miscellaneous earnings, \$472.50; total earnings, \$10,608; operating expenses, \$7,100.33; net operating earnings, \$3,507.67; interest charges, etc., \$2,544.87; net profit, \$962.80. Passengers carried during month, 251,246. Car mileage, 38,565.

Toronto Ry., Toronto and York Radial Ry., Etc.—Gross earnings for Aug., \$727,925; operating expenses, maintenance, etc., \$325,519; net earnings, \$402,406, against \$654,730 gross earnings; \$303,725 operating expenses, maintenance, etc.; \$351,005 net earnings, for August, 1911. Aggregate gross earnings for eight months ended Aug. 31, \$5,453,099; net earnings, \$2,821,327, against \$4,853,686 aggregate gross earnings.

P305 C. B. King,
Vice President, Canadian Street Railway Association.

ings; \$2,490,150 net earnings, for same period 1911.

Winnipeg Electric Ry.—Gross earnings for Aug., \$303,764; operating expenses, \$162,431; net earnings, \$141,333, against \$299,615 gross earnings; \$137,825 operating expenses; \$161,790 net earnings, for Aug., 1911. Aggregate gross earnings for eight months ended Aug. 31, \$2,427,830; net earnings, \$1,133,895, against \$2,503,972 aggregate gross earnings; \$1,257,983 net earnings, for same period 1911.

A quarterly dividend at the rate of 12% per annum was paid Oct. 1 to shareholders of record at Sept. 20.

Royal Car on the British Columbia Electric Railway.

In connection with the recent visit of the Duke of Connaught to the Pacific coast the B.C. Electric Ry. was requested to arrange for the transportation of the royal party from Vancouver to New Westmin-

Royal Car on British Columbia Electric Ry.

ster. In order to meet the demands fittingly, the company decided to specially equip one of its cars, and this work was handsomely done in its shops. The accompanying illustration shows the exterior and interior of the car which was one of the regular cars built for the company's Fraser river division. The interior fittings were entirely taken out and re-arrangement made in parlor car style throughout. The interior trimmings were of rich green and cream, the company's colors, relieved by light silk curtains at the windows, the carpeting being green and the chairs and lounges richly upholstered in green plush. The car was equipped with frosted lights, and as a portion of the run was in the evening, luminous electric radiators provided heating. The exterior of the car was painted in green and cream, the name, Connaught, and the royal coat of arms appearing on either side.

Montreal Tramways Co.'s Freight Traffic.

The situation in regard to the carrying of freight through Montreal streets by the Montreal Tramways Co., has become rather interesting. For a considerable period, the company, then the Montreal St. Ry. Co., carried freight, but action was taken by the city to prevent this. A local decision was given against the company, which appealed to the Supreme Court. The latter body decided against the company early in October. The company immediately gave instructions that the decision be complied with, and the stoppage raised an outcry from contractors and others who have taken considerable advantage of the facilities offered by the company. The city council was approached by those concerned, and in turn the council appointed a special committee to interview the Tramways Co. management, with a view to returning to the former condition of affairs. The company, however, declined to do this unless the city council prepare and pass a bylaw giving the company the necessary permission. A bylaw is in course of preparation and will be dealt with as soon as possible, so that the facilities for the conveyance of contractors' and other materials across the city may be renewed.

Calgary Municipal Ry.—Passenger earnings for Sept., \$59,136; miscellaneous earnings, \$820.25; total earnings, \$59,956.25; operating expenses, \$36,688.34; net balance, \$23,267.91; contingent account, interest and sinking fund, \$10,211.29; net profit, \$13,456.62, against \$33,677.05 passenger earnings; \$527.30 miscellaneous earnings; \$34,204.35 total earnings; \$20,135.55 operating expenses; \$14,068.80 net balance, Sept., 1911.

Electric Railway Right of Way at Highway Crossings.

A point of considerable importance to electric railways was decided on Oct. 4, in a suit brought by S. Brundage against the Windsor, Essex & Lake Shore Rapid Ry. to recover \$5,000 as damages for personal

injuries, loss of two horses killed and damages to wagon and harness, which occurred on June 30, 1911, at a highway crossing on that company's line.

The company produced witnesses who testified that the highway crossing signal whistle had been sounded by the motorman on approaching the crossing, and it was contended that the plaintiff was asleep and in no condition to heed warning signals. The jury of 12 farmers gave a verdict in the company's favor, costs to be paid by plaintiff.

This decision is of great importance to all railway companies, as it apparently establishes the fact that if a car or train is operated in accordance with the regulations enacted by the Board of Railway Commissioners, railway companies are not liable to damages resulting from accidents at highway crossings.

Electric Railway Notes.

The Edmonton Radial Ry., operated by the city of Edmonton, Alta., has ordered one Simplex, self clearing dump car from the Canadian Car and Foundry Co.

The Brandon, Man., city council has instructed the City Engineer to prepare specifications of single truck cars of the pay-as-you-enter type, with the necessary equipment.

The electric railway under construction in Saskatoon, Sask., is being provided with 12 single truck motor cars, built by the St. Louis Car Co., St. Louis, Mo. Each car will be 34 ft. 4 in. over bumpers, and 21 ft. 4 ins. over corner posts.

The Grand Valley Ry., which is in the hands of a receiver, proposes, press reports state, to put on a regular freight service between Brantford and Galt, Ont., and is having a special type of freight and express car built for the service. E. B. Stockdale, Brantford, Ont., is the receiver.

W. N. Warburton, heretofore in Toronto, Hamilton and Buffalo Ry. service at Hamilton, Ont., has been appointed General Manager, London and Lake Erie Ry. and Transportation Co., London, Ont., vice S. W. Mower, resigned. He was at one time with the Chatham, Wallaceburg and Lake Erie Ry.

The St. John Ry., St. John, N.B., has increased the rate of wages to its conductors and motormen by an advance of 2½c. an hour, the new schedule being, for the first six months, 18½c.; second six months, 20½c.; second year, 21½c.; third year and up, 23½c.; Sunday work, 4c. an hour extra.

The Board of Railway Commissioners has approved of standard passenger tariff at the rate of 4c. a mile; and of standard freight mileage tariff for the Western Can-

Royal Car, British Columbia Electric Ry., Interior.

The Cape Breton Electric Co., operating the electric railways in Sydney, North Sydney, and to Glace Bay, has voluntarily increased its conductors' and motormen's wages, the new rates being, for the first year, 20c.; second year, 21c.; third year, 22c.; fourth year and up, 24c. an hour.

ada Power Co.'s line. The tariffs are signed by R. F. Hayward, General Manager; W. McNeill, Assistant General Manager; H. Dalton, Passenger and Freight Agent.

During August, two employees were killed and nine were injured in the course of their work in connection with the operation of

electric railways in the Dominion. One of the fatalities was caused by the man falling from the running board of a car, and the other by being run over. Four of the other accidents were due to collisions, and one each to a fall, a derailment, to machinery and to a runaway.

The Toronto and York Radial Ry. has received two pay-as-you-enter cars, with steel underframes, 33½ ft. long, from the Preston Car and Coach Co.

The Toronto city council recently instructed the Commissioner of Works, to obtain the necessary equipment to enable the civic car line on Gerrard street east to be put into operation by about the end of November, and it has been decided to purchase at once three 45 ft. centre aisle cars, double end control, one work car and one sweeper.

The Regina, Sask., city council has ordered from the Preston Car and Coach Co. eight double truck car bodies, with accessories, delivered at Regina, for \$31,272. The Canadian Westinghouse Co. secured a contract for four sets 101 B motors, at \$2,340 each, f.o.b. Hamilton; eight sets air brake equipment at \$312 each, f.o.b. Hamilton; and the Canadian General Electric Co., Toronto, was given a contract for four sets of 6—80 A motors at \$2,350 each, f.o.b. Peterboro, Ont.

The following changes of officials of the Dominion Power and Transmission Co., Hamilton, Ont., have been made:—W. C. Hawkins, heretofore General Manager, Secretary and Chief Engineer, has been appointed Managing Director; E. P. Coleman, heretofore Manager of Railways, has been appointed General Manager; W. G. Angus, heretofore Electrical Engineer, has been appointed General Superintendent of Light and Power, and G. E. Waller, heretofore General Freight and Passenger Agent, has been appointed General Superintendent of Railways. The position of General Freight and Passenger Agent, has been abolished for the present.

Internal Combustion Manual.—This book of 146 pages, by F. W. Sterling, Lieutenant, U. S. Navy, published by the School of Marine Engineering, U. S. Naval Academy, Annapolis, Md., is intended as a text book for the use of midshipmen, but there is no reason why other students should not profit by the well arranged data here offered. Fuel being the fundamental that controls design and operation, this subject is first presented. After considering fuel, ignition, cooling, and lubrication in their relation to the engine, these four operations are shown combined in some of the latest and most approved types of engine. The producer plant is given a chapter to itself. For so short a course, the subject has been treated in a very sensible and satisfactory manner.

The Lemieux Act.—The labor congress which met at Guelph, Ont., recently, reaffirmed the decision of the meeting at Calgary, Alta., last year, and decided to petition Parliament to repeal the Lemieux Act, under which, boards of conciliation in labor disputes are appointed. Magnus Sinclair, of the electric railways employees union, spoke in opposition to the act, pointing out that the Montreal St. Ry. Co. had obtained an injunction restraining the board which was appointed, from holding an enquiry. President Lowe, of the maintenance of way employees union, supported the act, as also did D. Campbell of the telegraphers union.

The Canadian Northern Quebec Ry. roundhouse at Longue Pointe, Montreal, together with four locomotives, was destroyed by fire, Oct. 11. The damage is estimated at \$125,000.

Electric Railway Projects, Construction, Betterments, Etc.

Berlin and Waterloo St. Ry.—The Berlin, Ont., city council has under consideration plans for increasing the capacity of the car barn at Berlin. (June, pg. 303.)

Brandon, Man.—The city council has under consideration the building of car barns and power plant for the electric railway, on land owned by the city. (Oct., pg. 520.)

British Columbia Electric Ry.—A committee has under consideration proposals for a consolidate franchise for 25 years for South Vancouver, Point Grey, Hastings townsite and D.L. 301. The question of extension of lines in these places has given rise to considerable discussion for some time past, and the present committee is working on a new attempt to have the necessary lines built.

Cars are being operated over the line just completed from Kerrisdale station along Wilson road, to Dunbar st., about a mile. Connection is made at Kerrisdale station with the Vancouver and Lulu Island Ry., which is operated by the company.

A new line from New Westminster to Queensborough has also been put in operation. (Oct., pg. 520.)

Calgary Municipal Ry.—The citizens of Calgary, Alta., have by a very large majority carried the bylaw confirming an agreement with a southeast Calgary company as to the building of an electric railway there. About a mile of line is to be built from the present terminus of the city car line, to the eastern limits of the city, and handed over to the city as a free gift, for operation. (April, pg. 196.)

The Edmonton Interurban Ry. was incorporated by the Alberta Legislature in 1910 to build a number of electric railways radiating from Edmonton. The company is reported to have been reorganized in September, and to have entered into an agreement with the Franco-Canadian Corporation for financing. An office has been opened at 248 Jasper ave., Edmonton, and Mr. Kimpe is reported to be Managing Director in charge, with J. H. Pickard as Vice President. The company was reported, Oct. 11, to have entered into a contract with J. W. McLeod, for the building of a line from Edmonton to St. Albert, of six miles. At this point a power house is to be built and equipment installed sufficient to operate 26 miles of line. Work is reported to have been started, and it is expected to have the line completed by June, 1913. The line starts at Queen Mary park, where a station will be built for the transfer of passengers and freight to the municipal line, if satisfactory arrangements can be made. It is proposed to equip the line with 60 ft. passenger cars having a compartment for express, parcels and baggage; and cars for coal and general freight. The lines projected by the company, M. Kempe is reported as stating, will be as follows:—To Beaver Lake and Tofield, 40 miles; to Vegreville, 60 miles; to Pigeon Lake, 40 miles; to Lac Ste. Anne, 56 miles; to Mowassan, 45 miles; to Namayo, 12 miles; to Morinville by way of St. Albert, 18 miles.

Edmonton Radial Ry.—The Mayor of Edmonton is reported as stating, Sept. 11, that the city council was planning to extend one of its lines to St. Albert, by way of Calden and the terminus of the Edmonton, Dunvegan and British Columbia Ry., next year, and that a right of way had practically been secured without cost. Some grading is reported to have been done. (June, pg. 308.)

Grand Valley Ry.—E. B. Stockdale, receiver of the G.V. Ry., is reported as stating that the company's lines in Brantford, Ont., are to be put in first class condition

before the winter, and that a good deal of work, with this end in view, has already been done. (Mar., pg. 147.)

Guelph, Ont.—Press reports state that U. S. interests are endeavoring to secure franchises for the building of an extensive system of electric railways radiating from Guelph, and serving particularly Puslinch Lake, Hespeler, and Preston to the south, and as far as Arthur northerly. It is stated that those interested are desirous of obtaining the use of the Guelph Radial Ry. tracks and the surrender of that municipally owned railway's charter to Puslinch Lake, etc. (See Guelph Radial Ry., May, pg. 251.)

Kingston, Portsmouth and Cataraqui Electric Ry.—The city council of Kingston, Ont., has under consideration the question of repairing certain streets on which the electric railway is being operated, and of having new steel rails laid at the same time. The matter is still being negotiated between the parties. (Aug., 1910, pg. 682.)

Lake Erie and Northern Ry.—The plans for the line from the proposed terminus at the corner of Colborne and Clarence streets, through Brantford, towards Galt, Ont., have been prepared for submission to the city council. This portion of the line includes some rather difficult pieces of engineering. The plans for the entry into Galt were submitted to the city council, Oct. 8. W. P. Kellett, Brantford, is Chief Engineer. (Oct., pg. 520.)

Lethbridge Municipal Ry.—The municipally owned electric railway in Lethbridge, Alta., was reopened for traffic, Sept. 12. The city council's street railway committee has under consideration plans for the extension of the line during 1913. (Oct., pg. 520.)

London Street Ry.—In connection with the proposed north end extension the company has made application to the London, Ont., city council for permission to cross the C.P.R. tracks at Adelaide street. The company desires that the city should join it in making the necessary application to the Board of Railway Commissioners. (Oct., pg. 520.)

Medicine Hat, Alta.—Application has been made by a syndicate, headed by Sir Max Aitken, Montreal, to the Medicine Hat, Alta., city council for a franchise for an electric railway. The council is of opinion that the city could not finance such an undertaking itself, and that if the citizens demand a line at once, the only way to get it is by granting a franchise. No decision has been reached. (May, pg. 252.)

Montreal and Southern Counties Ry.—The Minister of Railways has approved of route map for the proposed line from Ranelagh to Laprairie, Que., four miles.

An agreement was signed Oct. 3, by which the town of Greenfield Park, adjoining St. Lambert, grants the company a 21 year franchise for an electric railway within its limits. The line is expected to be in operation by the end of the year. (Oct., pg. 520.)

Montreal Tramways Co.—An order was issued Oct. 8, by the Quebec Public Utilities Commission directing the company to build certain extensions of lines in order to provide additional routes and so avoid congestion of traffic. (Oct., pg. 520.)

We are officially advised that the only extension ordered by the Public Utilities' Commission was for half a mile of single track on Westminster avenue, Montreal West. This work is already in hand, and was expected to be completed Oct. 30.

The order made by the Quebec Public Utilities Commission directs, among other

things, that the company shall at once start, and complete with due diligence, a line to Montreal West. (Oct., pg. 520.)

Morrisburg and Ottawa Electric Ry.—At the annual meeting in Ottawa, Oct. 8, the directors were authorized to start construction in May next. The question of letting a contract was left in their hands.

Following are the directors and officers for the current year:—President, J. G. Kilt, Morewood, Ont.; Vice President, H. McDonald, Ottawa; other directors, J. Oliver, R. E. Reardon, J. W. Bogert, Morewood, Ont.; W. C. Strader, Williamsburg, Ont.; R. J. Biggar, Ottawa; Secretary-Treasurer, R. A. Bishop; Solicitor, G. D. Kelley; Auditor, G. L. Blatch. (Oct., pg. 520.)

Mount McKay and Kakabeka Falls Ry.—The Board of Railway Commissioners has rescinded the clause of the order of Aug. 14, directing the company to use steam as a motive power for its cars in passing over the C.P.R. at Neebing Ave., between Fort William and Neebing tp., Ont. (June, pg. 309.)

Niagara, Welland and Lake Erie Ry.—The taxpayers of Welland, Ont., have approved a bylaw granting a right to build an electric railway through a section of the industrial district being opened up by the Canadian General Securities Co., Toronto. (Oct., pg. 521.)

Press reports state that the work of extending the line to the suburb of Dane City, and to Rosedale, Welland, Ont., will be completed this fall. (Oct., pg. 530.)

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners has approved of revised location plans for the extension of the line from St. Catharines to Niagara-on-the-Lake, through Louth and Clinton townships, mileage 0 to 10.59. (Oct., pg. 521.)

Nipissing Central Ry.—We are officially advised that the Timiskaming and Northern Ontario Ry. Commission, which now owns the N.C. Ry., proposes to equip with electricity one track, on the double track line between North Cobalt and Cobalt, Ont., to allow the N.C. Ry. to operate its cars into Cobalt station. The details of the work to be done have not been arranged.

The line from Cobalt enters Haileybury by Georgiana and Ferguson avenues, terminating at Ferguson avenue and Browning street. The plans for the extension of the line show that one section will be built from the present terminus to the terminus of the Haileybury spur line at the lake shore end of Florence street, and another section, to be known as the Foster spur, from the end of the Haileybury spur on Farr street, and the lake shore road to the foot of Elliott street. The principal gradient on the first named section will be 1.7%, and on the second 2%, with a fair amount of curvature in each case. The Haileybury spur will be utilized to the junction with the Timiskaming and Northern Ontario Ry.'s main line, which will be utilized to near the boundary between Bucke and Dymond tps., whence an independent route will be followed into New Liskeard, to the Wabi river bridge, on Armstrong avenue. The principal gradient will be 2.66%, increasing for a short distance to 3.5%. This will be on leaving the T. & N.O. Ry. to get to the level at Lake Shore road. The extensions are under construction, but it has not been decided when they will be opened for traffic. (Oct., pg. 521.)

Ontario, West Shore Ry.—At a recent meeting at Goderich, Ont., between J. W. Moyes, the promoter of the line, and representatives of the municipalities which guaranteed bonds, Mr. Moyes is reported

as having stated the position of affairs as follows: The total expenditure on the road this far had been about \$650,000, which includes the \$400,000 of bonds guaranteed by the municipalities; \$75,000 or \$80,000 of moneys raised on the \$200,000 of unguaranteed bonds which had been hypothecated therefor; and the balance from other sources. He claimed to have put in \$170,000 of his own money. Completion was made impossible by the Hydro-Electric Commission stepping into the territory with its power development scheme, which prevented the sale of the Maitland river Power Co.'s bonds and the further advance of money to complete the road. He had made three offers to the Commission regarding the Maitland river scheme, but could not get an agreement. If the municipalities would in some way that might be agreed upon, either by further guarantee or in some way, assist to release these hypothecated bonds, they could be sold for enough to complete and put in operation the road, and he was willing for the railway company that the municipalities should get in return for this assistance a \$100,000 bond interest in the road and representation on the directorate. If the Hydro-Electric Commission would give a definite assurance of a power supply the completion of the line could be financed.

It was agreed that a deputation from the municipalities should wait on the Commission to see what could be done; and to secure a report on the cost of the work done from an engineer, preferably H. W. Middlemiss, Consulting Engineer of the Ontario Railway and Municipal Board. (Sept., pg. 468.)

Ottawa and St. Lawrence Electric Ry.—North Lanark Ry.—The first named railway is projected by a company bearing that title, and incorporated by the Ontario Legislature in 1908. In 1911 it secured an extension of time for construction for five years. Among the powers conferred was the right to require the charter of the North Lanark Ry., which was incorporated by the Ontario Legislature in 1898, and the Cornwall Electric Ry. In 1911 the N.L. Ry. secured an extension of time for construction for five years. Surveys have been made, but nothing has been done in the way of construction. We have been officially advised that the charters of the O. and St. L. E. Ry. and of the N.L. Ry. have been acquired by J. A. Morden and Co., Toronto, and that they have been amalgamated, the prospectus issued stating that the amalgamated company will now be known as the Ottawa and St. Lawrence Electric Ry.

A map, issued with the prospectus, shows a line from Ottawa to Morrisburg, with a branch from Kenmore to Russell; a line from Morrisburg to Cornwall, at which town connection can be made with the Cornwall Electric Ry., and running powers secured over it. From Morrisburg the line is shown along the St. Lawrence river to Brockville, thence northerly through Athens, Perth and Lanark to Brayside, on the Ottawa river, which is followed easterly to Ottawa. A branch is shown from Lanark to High Falls. This covers practically the whole of the mileage authorized to be built by the two companies—204 and 70 miles respectively. There are no engineering difficulties, 75% of the grading being over cultivated land, much of it at a dead level. The surveys were made under the direction of A. H. N. Bruce, M. Can. Soc. C. E., Ottawa, who estimated the cost of construction at \$11,000 a mile for 234 miles and \$13,000 a mile for 40 miles.

The company is being reorganized, and we are advised that it is expedient to put the line from Ottawa to Morrisburg under construction this fall, the Ottawa and St.

Lawrence Construction Co. having been given a contract for the entire line. (Sept., pg. 468.)

Ottawa Electric Ry.—The bylaw to give effect to the agreement as to extension of the lines in the city will be submitted to the taxpayers at the elections, Jan. 1. (Oct., pg. 521.)

Regina Municipal Ry.—The city council of Regina, Sask., has approved of the programme of extensions of the lines for 1913. This provides for the laying of a second track on two existing lines, and the laying of 12 single track and six double track extensions. The estimated total cost of the new construction is nearly \$700,000. The necessary bylaw will be submitted to the electors at an early date. (Aug., pg. 421.)

Saskatoon Municipal Ry.—The electric railway under construction in Saskatoon, Sask., consists of 12 miles of single track, but as there will be 1.5 miles of double track, the total length of track will be 10.5 miles. Four miles will be laid with 80 lb. steel, and the remainder with 60 lb. The rails are to be laid on cedar ties embedded in concrete on paved streets, and on cedar ties with ballast on improved streets. The bridge crossing the Saskatchewan river to the Nutana side has been taken over by the city from the province, and a double track is to be laid over it. The car barn, 90 by 160 ft., is on the west side, over the C.P.R. tracks. It is one storey, containing six tracks, office, quarters for the men, and a repair shop. Power will be obtained from the city power house. It is expected to have the line completed and in operation by the middle of December. (Oct., pg. 521.)

St. John Ry.—Press reports state that in addition to extending its power transmission and electric lighting lines, the company proposes to add considerably to its power house plant. (June, pg. 310.)

St. Laurent, Que.—The Franco-Belgian Investment Co. is making application to the council of St. Laurent parish, Que., for a franchise for an electric railway, as well as for lighting and water supply. The company has power under a general charter granted under the Dominion Companies Act, to acquire gas, electric light, electric railway undertakings, etc., and is reported to have a working understanding with the Montreal Tramways Co. O. L. Robitaille, Montreal, is a provisional director.

At a meeting of the St. Laurent council Oct. 7, a bylaw granting a 25 years franchise for an electric railway to the Franco-Belgian syndicate was read and considered. The bylaw was opposed on behalf of ratepayers, on the ground that the granting of the franchise would be prejudicial to the town's interests when the question of amalgamation with Montreal came up for consideration, as it would at no distant date. No definite action was taken.

Stratford Ry.—A press report states that plans have been filed for the building of 6.85 miles of electric railway in Stratford, Ont. The local papers make no reference to this, but state that on Oct. 7 Sir Wm. Mackenzie informed representatives of the local company that it was intended to build the line, and that instructions had been given to work out the best possible arrangements and terms. W. H. Moore and J. E. Robbery have been in Stratford frequently before and since that date, and it is said that an agreement for a new franchise is being prepared for submission to the city council. (Oct., pg. 521.)

Toronto and York Radial Ry.—The charter of the section of the Scarborough division within the present city limits of Toronto expires Nov. 16, and the city council has instructed the Works Commissioner to arrange as to the terms upon which it is to

be taken over by the city. It is expected that the city will arrange with the company for the operation of the section of line as at present, until the city has made plans for operating it in connection with other civically owned lines. (Oct., pg. 521.)

Toronto Suburban Ry.—We are officially advised that it is possible that the gauge of this railway, 4 ft. 10½ ins., will be

P241 E. P. Coleman,
General Manager, Dominion Power and Transmission Company.

changed to standard gauge in the near future, but that no definite decision has been reached.

The extension which is being built from near Lambton, through Summerville, and Cooksville, to Georgetown and Guelph, is to be standard gauge. Good progress is being made with the grading on the Maher sub-contract, which extends to Cooksville, and it is expected that the steel will be laid by Christmas.

Winnipeg Electric Ry.—We are officially advised that the Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary company, has let a contract for the building of a line to Stonewall, Man., and that work will be started at once. The line will start from near Middlechurch, on the company's present line, follow the right of way of the Stoney Mountain spur, which has been acquired from the Winnipeg city council, and then on to Stonewall. (Oct., pg. 520.)

Personal Paragraphs.

Miss L. W. Moyes, second daughter of J. W. MOYES, promoter of the Ontario and West Shore Ry., was married in Toronto recently to J. H. Bickle.

JAS. GRAHAM, heretofore an erecting engineer for the Canadian General Electric Co., chiefly in the maritime provinces, has been appointed General Superintendent, Yarmouth Street Ry., Yarmouth, N.S.

LUDWIG ROTHERY, son of J. E. Rothery, General Manager Toronto & Eastern Ry., has resigned his position as Superintendent of construction in the Tri State Ry. & Electric Co.'s power house at East Liverpool, Ohio, to take a post graduate course at Toronto University, of which he is a graduate.

A portrait published in Canadian Railway and Marine World for September, and which

had under it the caption, "F. D. BURPEE, Superintendent and Purchasing Agent, Ottawa Electric Ry.," was really a portrait of W. C. Lancaster, Electrical and Mechanical Engineer, Montreal Tunnel and Terminal Construction, Mackenzie, Mann & Co., the photographs received from the two persons named having been transposed in the office. Mr. Burpee's portrait is therefore given correctly in this issue. Biographical information respecting him was published in the August issue, pg. 419.

GEO. E. WALLER, who has been appointed General Superintendent of Railways, Dominion Power and Transmission Co., Hamilton, Ont., was born in Barton tp., Ont., Aug. 23, 1871, and entered transportation service in 1896, acting as conductor and motorman, Hamilton, Grimsby and Beamsville Electric Ry., and remained as such until 1897, when he was appointed agent, and in 1899, General Manager and Secretary, same road. He continued in that capacity until 1908, when he was appointed General freight and Passenger Agent, Dominion Power and Transmission Co., which position he held at the time of his present appointment.

C. B. KING, Manager London Street Ry., London, Ont., who has been elected Vice President Canadian Street Railway Association, and whose portrait appears in this issue, was born at Gallena, Southern Indiana, Sept. 12, 1871, and was educated at the public and high schools, New Albany, Ind., graduating in 1891. He entered electric railway service in its early days with the Louisville Ry., and served in its shops, and subsequently to 1895 in the stores department. In 1895 he entered the Detroit Citizens Street Ry. service and occupied various positions to 1905, chiefly as Assistant to the Vice President and General Manager, since when he has been Manager London Street Ry.

S. W. MOWER, for the last six years General Manager, London and Lake Erie Ry. and Transportation Co., and of its predecessor the London and South Western Traction Co., at London, Ont., has been appointed General Manager of the Otsego and Herkimer Rd., at Hartwick, N.Y., to succeed J. K. Choate, resigned. This company operates an electric line of 54.91 miles, connecting Oneonta, Hartwick, Coopers-town, Richfield Springs, Mohawk and Herkimer, N.Y., and reaches Utica by the Utica and Mohawk Valley Ry. It is advertised as "the most beautiful scenic route in central New York." It has 27 motor and 60 other cars, and operates 10 trains each way per day. Mr. Mower was in the Detroit United Ry. service before going to London.

EDWARD P. COLEMAN, who has been appointed General Manager, Dominion Power and Transmission Co., controlling various electric railways in and around Hamilton, Ont., and whose portrait appears in this issue, was born at Taunton, Mass., June 14, 1867, and educated at the public schools there. He was from Feb. 9, 1885, to Feb. 9, 1896, in the Huber Printing Press draughting office at the Taunton Locomotive Manufacturing Co.'s shops, with which his father and grandfather were associated for many years; Jan. 1, 1896, to Sept. 1, 1900, Treasurer and General Manager, Attleboro Steam and Electric Co., Attleboro, Mass.; May 5, 1898, to Mar. 31, 1899, in United States service during the Spanish war as Second Lieutenant and Battalion Adjutant, 5th Massachusetts Infantry; July 1, 1899, to Sept. 1, 1900, General Manager, Plymouth Electric Light Co., Plymouth, Mass.; Sept. 1, 1900, to June 1, 1905, Vice President and General Manager, Consolidated Lighting Co., Montpelier, Vt.; June 1, 1905, to Mar. 1, 1907, in practice as consulting engineer,

general, electric light, power, railway and quarry work, and Treasurer and Manager, Wetmore and Morse Granite Co., Montpelier, Vt.; Mar. 1, 1907, to Jan. 1, 1909, General Manager, Great Northern Power Co., Duluth, Minn.; and Mar. 1, 1909, to Oct. 10, Manager of Railways, Dominion Power and Transmission Co., Ltd., Hamilton, Ont.

PATRICK DUBEE, who has been elected President, Canadian Street Railway Association, and whose portrait appears in this issue, was born at Montreal, Mar. 4, 1876, and was educated at the Christian Brothers school and at St. Patrick's academy, there. He started as office boy with the Montreal St. Ry., July 9, 1890, two years before the electrification of the road, and has remained in its employ ever since, occupying various positions in the offices of the Secretary, Comptroller and Manager, until May, 1901, when he was appointed Assistant Secretary at the time that W. G. Ross was appointed Secretary-Treasurer. In Dec., 1903, Mr. Ross having been elected Managing Director, Mr. Dubee was appointed Secretary. In 1903, when the Montreal St. Ry. Mutual Benefit Association was organized, the details were left in his hands, and he was subsequently elected a director and Secretary-Treasurer of the Association, and has occupied those positions continuously. The association thus organized is recognized as the most successful of its kind on the continent. In 1901, when the Montreal St. Ry. Co. acquired control of the Montreal Park and Island Ry. Co., he was also appointed Secretary of the latter company, and in 1904 on the organization of the Suburban Tramway and Power Co., he was also appointed Secretary-Treasurer, and in 1909, in addition, was appointed Secretary-Treasurer of the Longueuil Tramways Co. On the recent consolidation of the Montreal St. Ry. Co., and its subsidiary companies under the title of Montreal Tramways Co., he was

P306 F. D. Burpee,
Superintendent and Purchasing Agent, Ottawa Electric Railway.

appointed Secretary-Treasurer of the new company, which position he still holds. He has taken a very active part in the Canadian Street Railway Association's proceedings since its inception in 1904, having been a member of the executive committee for several years, and for the year 1911-12 Vice President.

Quebec Railway, Light, Heat, and Power Company's Report.

Following is the report for the year ended June 30, submitted at the recent annual meeting:—

The gross earnings from operation were \$1,415,825.38, as compared with \$1,280,126.76 in 1911, an increase of \$135,698.62; the operating expenses were \$734,925.35, as compared with \$661,907.15, an increase of \$73,018.20; the net earnings were \$680,900.03, an increase of \$62,680.42 over 1911, equal to 10.13%. After adding miscellaneous income, \$194,584.46, and deducting fixed charges of \$660,363.96, two dividends paid Oct. 15, 1911, and Jan. 15, 1912, amounting to \$199,990, and organization expenses of \$3,919.68, there remains a net surplus of \$11,210.85, which added to surplus account leaves a balance of \$73,539.45 to the credit of this account. Reserve accounts have also been created.

last year, an increase of 54%. The road and track have been maintained in good condition.

QUEBEC AND SAGUENAY RY. (Under Construction.)

This railway extends from mile 30, the termination of the Montmorency division, to mile 85.5, Pointe au Pic. Good progress has been made, approximately 85% of the work being completed. \$104,992 was received on account of Dominion government subsidies, and this was applied to the redemption of bonds according to the trust agreement.

LOTBINIERE AND MEGANTIC RY.

This railway runs between Lyster and St. Jean Deschailions, Que., 30 miles. It was taken over by the company during Feb. The road is of standard gauge, 56 lb. rails, and serves a very good lumber territory. It was acquired in connection with the purchase of the charter of the Quebec Eastern Ry. It was taken over as a going concern and its revenues have been taken into the

The completion of the new office building at the corner of Crown and St. Joseph streets was unfortunately delayed until May. The completion of the building enables the consolidation of the executive offices in the one building and has facilitated the transaction of business. Considerable office space has been rented in the building.

The Vancouver Island Electric Ry. Co. is applying to the British Columbia Government for licenses to store or pen back water on the Sproat and Campbell rivers, and to take and use water from the Campbell and Stamp rivers and Qualicum creek for the development of electric current for railway and power purposes. The company proposes to build a transmission line to Nanaimo, and to build electric railways. The applications are signed by E. Bottomley, agent for the company.

The pay-as-you-leave car, put into operation by the Cleveland (Ohio) Railway, has been withdrawn after a trial of several months. While loading such a car is expeditious, it was found that unloading is very slow and that on the whole the disadvantages more than offset the advantages. The fare box will be placed in the rear of the car, and it will hereafter be operated in the same way as the pay-as-you-enter cars.

The New Orleans and Grand Isle Traction, Light and Power Co., of which C. E. A. Carr, formerly of Quebec, is General Manager, intends to apply to the Dominion parliament next session for an act to authorize the company to acquire and operate railways, tramways and telegraph and telephone lines outside of Canada; to change the name to the New Orleans and Grand Isle Ry., Light and Power Co., Ltd., and to issue to holders of its shares who may desire the same share warrants to bearer in the usual form in lieu of the stock certificates representing such shares.

RAILWAY DEPARTMENT.

Quebec Ry., Light and Power Co. City Division.

During the year the company continued its policy of improving its service, and the result shows new record figures, the increase in revenue passengers being 928,315 over 1911. More attention than ever has been devoted to repairs and renewals to the roadway. During July, 1911, another observation car built in the company's shops was added to rolling stock, making two now in use. The rolling stock has not only been maintained in good condition during the year, but considerable sums have been expended upon all departments in line with the policy to maintain the property and rolling stock in first class condition.

Montmorency Division.

This division again shows very appreciable gains, both in its passenger and freight service. About two and a half miles have been relaid with 80 lb. steel, the old rails being used for sidings at various points. Terminal facilities in the city of Quebec have been very considerably improved to cope with the rapidly increasing traffic. All property has been maintained in a proper state of efficiency, and a considerable sum has been spent on the upkeep of the tracks and rolling stock. The Kent house and amusement park are becoming increasingly popular as resorts.

QUEBEC COUNTY RAILWAY.

This railway continues to make satisfactory progress, the number of revenue passengers carried being 137,216 in excess of

earnings of this company.

POWER AND LIGHT DIVISION.

The consolidation under the direction of R. S. Kelsch, Consulting Engineer, of the various power supplies at the Queen street sub-station has been completed and is a great advantage both to customers and the company itself, guaranteeing as it does a service free from interruptions or breakdowns, the company being able to utilize power from any one or all of its hydraulic stations and its steam plant for its various lighting or power requirements. Special attention has been paid to the distribution system and a large sum has been expended in repairs and replacements. Several important power contracts are in view for the coming year and the outlook is bright.

2,006 ft. of new gas mains were laid during the past season. The new installations total 564, including stoves, radiators, heaters, etc.; 311 new meters were added. In line with the policy to put all the property in the best possible condition, over 38,000 ft. of the distribution system was gone over, thoroughly examined and repaired.

The increase in gross earnings from operation of \$135,698.62 demonstrates not only the increased growth of business, but also of the city and district served, and it is the opinion of your directors that this increased growth will continue. A feature of the financial report is that while a large sum has been spent on the upkeep and improvement of various plants, the percentage of operating expenses to gross earnings remains at the low figure of 51.91%.

Railway Ties Bought in 1911.

There were 13,683,770 cross-ties purchased in Canada in 1911, according to statistics compiled by the Department of the Interior's forestry branch. This is an increase of 4,469,808 (48.5%) over the number purchased in 1910. The increase is largely due to railway construction, which was especially noticeable in the western provinces. The replacement of ties on existing lines amounted to about 10,000,000.

Eighteen kinds of wood were used, jack pine standing first in importance, numerically, with about 40% of the total. Tamarack stood second with almost 19%. Douglas fir with 14% and hemlock with 12% occupied third and fourth places, respectively.

The average price of ties in 1911 was 39c., one cent more than in 1910. Southern pine ties at \$1.10, imported from the United States, were the most expensive, and spruce trees at 26c. were the cheapest. The sawn tie is increasing in favor, evidently, as 70%, or 3% more than in 1910, were the product of the mill. Sawn ties cost, on the average, 41c. each, or 4c. more than hewn ties, while in 1910 the hewn ties were the more expensive by 3c.

Only 206,209 ties, or 1.5% of the total number purchased, were given preservative treatment. However, this is practically a clear advance over 1910. Two treating establishments are now in operation. On the average, the treatment of ties prolongs their life by 10 years. It is estimated that at least 350,000,000 feet, board measure, could be saved annually through this process.

Marine Department.

Dominion Hydrographic Survey Steamship for Atlantic Coast, Hudson Straits and Bay.

A preliminary description of this vessel was given in Canadian Railway and Marine World for July, an illustration of the profile was published in the August issue, and the letting of the contract for construction at Wallsend on Tyne, Eng., was announced in the October issue. Following is a more complete description:—

Owing to the conditions that will be encountered in surveying Hudson bay and straits this vessel has received special attention in design to meet the severe ice conditions under which she is likely to operate, and in determining the type of ship this had also a considerable influence and it was deemed advisable to depart from the two recent vessels designed for the above department, consequently a spar deck type was considered advisable. Also, to meet the severe conditions referred to, it was decided to build her along the lines that practice has determined as being most suitable for the ice boats in operation in Newfoundland. The bow or forefoot will therefore be well cut away and well rounded at the bottom where the plates are moulded into the stem, giving quite a spoon effect to the lower part of the forefoot so that the boat could easily ride over or upon the ice obstructions.

In frame this vessel will be considerably heavier than required for classification in Lloyds 100 A1, and the half length forward will not only be considerably heavier in frame, but the frames will be spaced much closer together. From one third the length abaft the stem the frames will be only 16 ins. apart. From there to one half the length they will be 18 ins. apart, and the balance the usual pitch determined by Lloyds.

It was considered desirable to considerably increase the plating of the forward end of the ship. Consequently all plating for the forward half length will be twice as thick as that called for by Lloyds, and the two strakes at the water line will be twice as heavy as that demanded by Lloyds for the full length, it being assumed that after the bow has broken up, the ice, that in its travel aft these two upper strakes should be protected. In fact, the designer, after a visit to St. Johns, Nfld., felt satisfied that she will be in every way suited for the purpose intended.

It was decided to maintain a very minute water tight subdivision. Consequently this boat could easily flood two or more of her compartments and still be perfectly seaworthy, a condition, however, that would not very likely occur. Notwithstanding, in as much as she will operate so far from her base it was considered advisable to take no chances. In her ability to meet and pass through large floes of field ice she will have very few equals.

The type of boat adopted, as before stated, is a shelter deck ship built of steel throughout, with scantlings practically twice as heavy as required by Lloyds. She will have a straight stem and elliptical stern, with two pole masts of wood, equipped with a full outfit of sails and all necessary standing and running rigging. The forward end of the spar deck will be specially stiffened from the stem to back of the breakwater, and under the windlass and cables special

teak beds will be provided, and in addition this deck will be specially stiffened by extra pillaring to the main deck. The star deck will be steel plated throughout, and then covered with Oregon pine with teak margins. The main deck will be plated amidships over and around the machinery spaces and then laid with Oregon pine. The orlop decks will be plated and all caulked water tight, so that if these orlop decks are considered as tank tops there will be a double bottom throughout her complete length, although what is usually understood as double bottom will extend only from the aft engine room bulkhead to the forward bunker bulkhead. This space will be divided into three compartments transversely and then subdivided longitudinally by the centre keelson, making practically six separate water tight compartments. To carry the watertight subdivision to a further point the longitudinal bunker bulkheads in both engine and boiler spaces will also be watertight.

On the boat deck will be stowed two 27 ft. gasoline launches of a type that has been demonstrated by the Canadian Hydrographic Survey as most suitable for this work. The engines used in these launches will be the standard of New Jersey. Aft of the launches will be stowed two 27 ft. cutters, also specially equipped for surveying service. These launches and boats will be swung in and out by a complete outfit of Welin davits and chocks.

On the spar deck will be placed the usual steam windlass and abaft this a deep breakwater to throw over any water that she may shed. Then will come a spacious chartroom, the sailing master's bedroom and day cabin, and the coxswain's storerooms, and abaft the engine and boiler casings a wireless office and a stateroom for the wireless operator. On the aft end of this deck will be a complete sounding outfit, including a deep sea sounding donkey, and on the port quarter aft will be a specially designed steam driven sounding machine and on the

Dominion Government's Hydrographic Survey Steamship for Atlantic Coast, etc.

The vessel over all will be 182½ ft. long; length between Lloyds perpendiculars, 170 ft.; beam moulded, 33½ ft.; depth moulded to upper deck, 13½ ft.; displacement on mean draft of 11 ft., 1,050 tons, with 250 tons of coal on board and 60 tons of stores and water; speed on the above displacement 12½ knots for a 10 hours continuous trial.

On the boat deck will be placed the pilot house, to be heavily built of teak and the interior lined in quarter oak and the house then bolted by a series of sceptre bronze bolts to the chart house. On the top of the pilot house will be the standard compass, and owing to the dip of the compass in the northern latitudes in which this vessel will operate it is specified that no iron work shall be nearer this compass than 18 ft., and to fulfil this requirement it was found necessary to make the greater portion of the chartroom of sceptre bronze, which possesses very remarkable qualities as it is found that the galvanic action that usually takes place between bronze and iron in sea water in this case is at a minimum, and is practically a negligible quantity.

starboard quarter a submarine sentry. On this deck also will be placed the small dinghy for ship's use, and on the port quarter aft this dinghy a sounding platform and two additional sounding platforms under the bridge at this level, one port and one starboard.

Immediately abaft the engine hatch will be a powerful steam winch, for warping ship, and in addition for handling the falls of the boats and launches.

It is expected that when this vessel proceeds north for her season's work, she will carry quite an extensive outfit, and to handle this outfit there will be three pairs of extra davits on the spar deck and two 3½ ton cargo booms, one to the mainmast, one to the foremast.

Special reference should be made to the chartroom, which will really form the ship's workshop. In it after the several boats have done their day's work, will be plotted the results, on a preliminary chart. Consequently it has received special attention. In the centre of the room will be a large chart table under which will be a lot of drawers for stowing the complete and in-

complete charts. In the corners on the aft side of this room will be cabinets for carrying the scientific instruments and overhead a speaking hood for communication with the pilot house, so that the officer in charge of the survey, when deep sea sounding with the ship proper, can from the chartroom dictate and check her course. The chartroom will be neatly panelled in quarter oak and the floor laid in linoleum, making when complete a remarkably comfortable workshop.

The main deck will be devoted entirely to the accommodation of the crew and surveying staff. In the extreme forward end of the ship will be the general storeroom, in which will be stored gasoline. When carrying gasoline this storeroom will be open thoroughly to observation, being only closed by a collapsible iron fence, so that in case of fire it can be readily seen and completely exposed for treatment. Aft this port and starboard will be the crew's offices, including boatswains' stores, carpenter shop, and in the centre a large room for cold storage, on the forward end of which will be placed a no. 3 refrigerating machine. Aft of this will be a space occupied by ladders giving access to the firemen's and seamen's quarters, and in the wings of this space will be hooks for hanging the seamen's oilskins, and also the fresh water drinking tanks. Then will come the cabins for the accommodation of the petty officers, eight in number, all fitted in pine, with hardwood berths, and neatly painted. The centre of this space will be devoted to their mess. Then will come the machinery space, and above the boilers on this deck at the aft end of the boiler room will be a large galley. In the wings of the engine room on this level, accommodation will be provided for chief engineer, engineers' bathroom, cabin for 2nd and 3rd engineers, and officers' toilet, all on the port side. On the starboard side will be the mess room for these officers, and a stateroom for the two mates. Then will come the lobby immediately abaft the steering engine room, giving access to the quarters devoted to the surveying staff. This will consist of a wardroom, provided with sideboard and dining table, and on the port and starboard sides of this wardroom will be six staterooms neatly fitted out for the accommodation of the junior staff of the surveying branch. On the starboard side, forward of these rooms, will be their pantry, and on the port side their bathroom and toilet, making them entirely independent. Aft of these accommodations will be placed the accommodation for the hydrographic officer in charge of the survey. This will consist of a saloon panelled in mahogany, a stateroom and a large bathroom and wardrobe. The fantail abaft of this will be devoted to general stores.

The forward orlop deck will be devoted to storeroom, general locker, accommodation for eight firemen on port side and 12 seamen on starboard side, and a room for the accommodation of eight additional seamen that would form special survey parties independent of the crew. Then will come the machinery space, and on the aft orlop deck will be four more staterooms devoted to the surveying staff and extensive storerooms and lockers.

Everything has been done as far as possible to make the ship complete for the purpose intended. The navigating outfit will be as complete as can be made, and the compasses, three of which will be fitted, will be of the Kelvin White type. There will also be located in the saloon of the officer in charge of the survey a chronometer locker containing five chronometers, all of the best manufacture.

The propelling machinery will consist of

a vertical inverted three cylinder triple expansion engine, with cylinders 17½, 27½, 47, and a common stroke of 28 inches. This engine will drive a four bladed sceptre bronze propeller about 10 ft. in diameter and 9 ft. pitch, and revolutions of from 150 to 160, with a steam boiler pressure of 185 lbs. There will be two Scotch boilers, each 11½ ft. long and 11¼ ft. mean diameter, having about 78 sq. ft. of grate surface and a collective h.s. of 2,800 sq. ft., all built to Lloyds highest class and tested for working pressure of 185 lbs. These boilers are to be fitted with the latest type of heated draft, driven by a 54 in. blower. The auxiliary machinery in the engine room will consist of an independent air pump, a steam dynamo, one duplex feed pump, one auxiliary feed pump, one fire and bilge pump, one sanitary pump, one 10 ton evaporator, and a distiller with a capacity of not less than 1,600 gallons of potable water in 24 hours. All the machinery to be of the best make and manufacture.

The main condenser will be built up of wrought steel and fitted complete internally with sceptre bronze tube sheets and tubes for the reasons as before specified. This condenser will be of the uniflow type and is designed to give 27 ins. of vacuum under the most extreme conditions. The stern tube, also a special feature, will be of cast steel, and the shafting throughout is to be not less than ¾ in. diameter larger than the diameters called for by Lloyds.

She will be further equipped with two independent propellers, one for ordinary work when clear of ice, of the built up type, all of sceptre bronze. The other propeller is to be of steel throughout and of heavy dimensions, built for ice work alone.

Another special feature will be the dynamo, to be driven by a two cylinder compound engine enclosed and with forced lubrication. An independent booster will also be fitted, so that any over load will be discharged into a series of hermetically sealed cells. These cells will be for use at night only and are to be of such capacity as will carry 32 lights for 12 hours without any undue falling off in light.

It is expected that the vessel will be completed by July next, in time for the opening up of the Hudson bay navigation, and that she will be the latest type for the purpose intended.

The New Grain Elevator for Montreal.

The new concrete grain elevator, which the Montreal Harbor Commissioners have built to enable them more efficiently to cope with the grain situation in the harbor, was officially opened by the Minister of Marine, Oct. 3. The construction was decided on in 1910, and the specifications provided for a capacity of 1,772,000 bush., but during construction it was discovered that this capacity would be insufficient to meet the needs of the port, and additional storage capacity was ordered for another 850,000 bush., making a total storage capacity of 2,622,000 bush. The elevator, with the storage addition, occupies a space of 456 ft. 8 ins., by 100 ft., and is 220 ft. high. The structure is erected on filled ground along the waterfront, where there is an approximate average level of 25 ft. The rail level is at high water mark, and to provide for the deep receiving pits a large portion of the excavation for the main elevator was carried down about 20 ft., and the whole area of the main building was excavated to low water level and wooden piles driven. On these piles, reinforced concrete 3½ ft. thick was laid, and concrete piers and walls built on this foundation and carried

to track level. The track girders are of reinforced concrete, except over the receiving pits where they are of steel, as are also the boot tanks and track hoppers. The foundation of the additional storage capacity was arranged differently, as, owing to there being no elevator legs, such deep excavation was not necessary. Reinforced concrete piles were driven, with their tops about 4 ft. below the base of rail, and on these the concrete foundation was laid. There are four tracks through the elevator, with bin openings 22½ ft. above. The bin columns are of reinforced concrete spaced 24 ft. centres each way, with heavy reinforced concrete girders supporting the bins. The curtain walls are of concrete and the windows are fireproof. The bins are also of reinforced concrete, 86 ft. deep, with walls 8 ins. thick, and capacities ranging from 6,800 to 14,300 bush. There are 278 bins exclusive of shipping bins. The upper portion of each bin along the waterside is used as a shipping bin, an intermediate concrete bottom being placed about midway. The cupola is built entirely of reinforced concrete, the lower sides of the floor and roof beams being chambered. It is 107 ft. high above the bin walls and 220 ft. above base of rail. The marine tower for unloading vessels is erected on a jettty, and is so placed that two vessels may be dealt with at the same time. It is 310 ft. from the elevator, and is of structural steel, with a steel gallery running from the tower to the elevator, carrying the conveyors which take the grain from vessels to the elevator.

The general equipment includes four receiving tracks, 24 track hoppers and 12 receiving legs, each leg being fed from two hoppers, interlocking valves being used to prevent grain from reaching the leg from more than one hopper at a time. The arrangement of the track hoppers is such that the unloading of a car on one side of the leg is independently carried on and may proceed simultaneously with the unloading of a car on the other side. The elevator will be capable of receiving 240 cars in 10 hours under ordinary conditions, and this can be increased. The marine tower is equipped with two marine legs with an hourly capacity of 20,000 bush. The grain is weighed by Fairbanks continuous automatic weighing machines, and the shovel apparatus is operated by air, while the best equipment for handling the machinery is provided. Cleaning and drying machinery are also included in the equipment, and power is supplied by electric motors of the induction type.

The designers and constructing engineers of the elevator are John S. Metcalf Co., Ltd., Montreal.

Largest Floating Dry Docks in the World.

Following is a list of the largest floating dry docks, by which it will be seen that the one which has been located at Montreal stands fifth as regards lifting capacity and length:—

Dock	Lifting capacity Tons	Length Ft.	Clear width Ft.	Depth over keel Ft.	Owners
Kiel.....	40,000	656	154	35½	German Govt.
Hamburg....	35,000	720	108½	33	Rohm & Voss
Medway.....	32,000	680	112	36	British Govt.
Portsmouth....	32,000	680	113	36	British Govt.
Montreal....	25,000	600	100	27½	Canadian-Vickers Co.
Hamburg....	25,000	525½	108½	35	Vulcan Co.
Pola.....	22,500	584½	111½	37	Austro-Hung. Govt.
Rio de Janeiro.	22,000	550	100	30	Brazilian Govt.
Hamburg....	20,000	511½	97	26	Reihersstieg Co.

An order in council has been passed changing the name of the steamboat John B. Trevor, to Atikokan.

Collision Between s.s. A. W. Perry and Schooner Albert J. Luk.

Commander H. St. George Lindsay, R.N.R., Wreck Commissioner, sitting at Halifax, Oct. 3, assisted by Captains Neil Hall and J. W. Harrison, of Halifax, gave the following decision respecting the above mentioned collision which occurred on May 16:—

"Both vessels are to blame for the collision, inasmuch as the speed that each was making prior to and at the time that they came in sight of each other, was excessive, considering the dense fog prevailing at the time, and not in accordance with article 16 of the International Rules of the Road. Therefore the court censures both masters, and also censures the first mate of the A. W. Perry—W. A. Power—for not stopping the engines (vide art. 16) on first hearing the schooner's horn. The court severely criticizes the custom of the watch officer being in a pilot house in thick weather, with both doors closed, and the engine room telegraph situated on the bridge, out of reach of that officer, as not being conducive to safe and proper navigation, and the court also condemns the custom, which is said to be general in fishing schooners, of leaving the decks of these vessels in charge of two deck hands only. Under such weather conditions as prevailed on the night of the accident, the court considers that such a practice is to invite disaster."

Charges for Loading Grain at Port Arthur and Fort William.

A conference was held at Port Arthur, Oct. 8, between Jas. Playfair, President; F. King, Counsel, and F. S. Wiley, representing the Dominion Marine Association, and C. Tilt, President, A. C. Rutan, Secretary, and others, representing the Lake Shippers' Association, when the following tentative agreement was arrived at:—

"It is agreed to suspend the Lake Shippers' Clearance Association's present tariff so far as it applies to vessels, from Oct. 15 to Nov. 25, 1912, inclusive, and to substitute the following:—

"(a) Vessels up to 125,000 bush. of wheat capacity, 30 cents per thousand bush. for loading within 24 hours of arrival, loading weather.

"(b) Vessels of 125,000 to 200,000 bush. of wheat capacity, 30 cents per thousand bush. for loading within 48 hours of arrival, loading weather.

"(c) Vessels of 200,000 or over bush. of wheat capacity as follows:—40 cents per thousand for loading in 24 hours; 30 cents per thousand for loading in 48 hours; 10 cents per thousand for loading in more than 60 hours; 20 cents per thousand for loading in 60 hours.

"If above time limits are exceeded in classes a and b the charge is to be 10 cents per thousand bushels.

"If delay is caused by non surrender of documents, the shippers are to be penalized by the Lake Shippers' Clearance Association to the extent of the estimated loss of revenue to that Association by reason of such delay.

"Sample cargoes to be loaded at 15 cents per thousand bushels straight.

"After No. 25, 1912, and until the close of navigation, the charge to be 20 cents per thousand bushels flat on all boats loaded.

"Time shall start from time of arrival ready for loading if such time is prior to 4 p.m. on a working day. If after that hour time shall start at 7 a.m. on the fol-

lowing morning if elevators not working during the night."

As above stated, the agreement is merely tentative and for a limited period and it is proposed to settle the whole question at a further conference during the winter. The important points of the present agreement are that it is an acceptance of the Dominion Marine Association's proposal to base the tariff of charges upon actual dispatch, that it is a frank open agreement that the most fruitful source of trouble is the shipper's delay in putting in his surrender, and that it is an agreement by the Lake Shippers' Clearance Association to try to discipline or penalize its members for such delays. The agreement is by no means perfect, but any faults or inconsistencies can be remedied during the winter, and in the meantime both associations are pleased to have found common ground to further negotiations.

Atlantic and Pacific Ocean Marine.

Canadian Northern Steamships, Ltd., has increased the number of its directors from five to six.

The Manchester Liners' s.s. Manchester Civilian, which is under construction in England for the Canadian trade, is expected to be completed shortly, when she will immediately be put into service.

The Elder Dempster Co.'s s.s. Canada Cape, which was at one time in operation between Canada and Cape Colony, and which was damaged at Cape Town some time ago, has been sold as she lies in her damaged condition at Southampton, Eng.

In connection with the recent collision between the C.P.R. s.s. Empress of Britain and the s.s. Helvetia, in which the latter vessel was sunk and lost in the St. Lawrence, it is reported that the C.P.R. has arranged to give the owners £60,000 as compensation.

The Head Line s.s. Bengore Head, which stranded about five miles northeast of the Flower Island light, Oct. 6, floated the following day and put in at Fortune bay to await the arrival of a tug. She left Fortune bay Oct. 10, for Montreal, where an examination will be made.

The Canadian Northern Steamships, Ltd., has increased the number of its directors from five to six, R. M. Horne-Payne being the additional member of the board. The full board now consists of Sir William Mackenzie, Sir Donald Mann, Z. A. Lash, D. B. Hanna, A. D. Davidson and R. M. Horne-Payne.

The number and tonnage of ocean going vessels arriving at Montreal from the opening of navigation to Sept. 30, was 558, with a tonnage of 1,814,086 tons, being a decrease of 28 vessels and an increase of 58,580 tons, as compared with the same period in 1911. During past years there has been a steady increase in the tonnage of vessels using the St. Lawrence route.

The Minister of Marine, accompanied by a number of representatives of the shipping interests, made his annual inspection of the St. Lawrence ship channel early in October. Speaking at a dinner at Sorel, he stated that it was the intention of the government to make the channel the safest in the world. In a few years time there would be a 35 ft. channel, and he predicted great growth in the tonnage using the St. Lawrence route.

The report of Manchester Liners, Ltd., for the year ended June 30, shows profits of £101,946, a little over double those of the previous year. There are arrears of dividend on the 5% preference stock, cover-

ing 3½ years, which are to be paid off, and £45,000 has been written off for depreciation, leaving £10,100 to be carried forward. The company operates entirely between Canada and Manchester, Eng., and is a subsidiary of Furness, Withy and Co., who are largely interested in the Richelieu and Ontario Navigation Co.

On a recent westward trip of the Canadian Northern s.s. Royal Edward, an apparatus for the detection of the presence of icebergs, during fog, etc., was tested. It is described as an electric, automatic, self recording apparatus for taking the salinity of the water, with an automatic ice alarm which is sounded immediately the proximity of ice is discovered. This is achieved, not by the change in temperature of the water, but by the change in salinity, which is greatly reduced by the presence of icebergs. It is stated that the tests were extremely successful.

The s.s. Thyra Menier, which has been chartered by Henri Menier for the Anticosti island trade, is owned by the Donald Steamship Co., of Bristol, Eng., and New York, and was recently built at Newcastle, Eng. She is built on the arch principle, and is of the following dimensions:—length, 240 ft.; breadth, 36 ft.; depth, moulded, 16 ft. 5 ins., with 5 ft. 9 ins. arch. The propelling machinery consists of engines and cylinders 17, 28 and 46 ins. diam., by 33 ins. stroke, supplied with steam by two main boilers, 12 by 10½ ft., at 180 lbs., giving her a speed of about nine knots an hour. She will carry about 2,250 tons dead weight on 16 ft. draught.

Maritime Provinces and Newfoundland.

The work of construction on the pier at Halifax, which is a part of the general improvement of the harbor, is proceeding, but it is estimated that it will not be completed until next year. The cost is approximately \$1,000,000.

The annual meeting of the Canada Atlantic Transit Co., was held recently. Following are the officers and directors for the current year,—President, E. J. Chamberlin; Vice President, H. G. Kellev; Secretary-Treasurer, F. Scott; other directors, W. Wainwright, J. E. Dalrymple, R. S. Logan and W. H. Biggar.

The Reid Newfoundland Co.'s steamship for the Cabot strait service, and the one for the Labrador service, descriptions of which have been given in a previous issue, are well on the way, and it is anticipated that the former will be ready for service about January, and the other in time for the seal fishery season.

The Canada Atlantic and Plant Line Steamship Co.'s s.s. Evangeline, a description of which has been given in a previous issue, is announced to sail for Canada shortly, some delay having occurred on account of extra work to her interior fittings. H. L. Chipman, Manager of the company, superintended her outfitting.

The British government survey ship Ellinor, which has been engaged in survey work round Newfoundland and Labrador for some time, has been removed from that neighborhood, and sent to the West Indies to carry out the survey of a harbor there, after which she has been ordered to return to England, about April, 1913. The Newfoundland government is making representations to the British government, in the hope that the work hitherto done by the Ellinor be continued.

At a recent meeting of the Halifax board of trade, a communication was received from a steel shipbuilding concern in England, making a proposal for the establishment

of a steel shipbuilding plant in Halifax. Although the name of the firm concerned was not mentioned in the reports, it is said that it is Armstrong, Whitworth and Co., of Elswick, and Manchester, with which firm St. Percy Girouard, who has recently been visiting in Canada, in connection with a proposed shipbuilding plant, is connected.

The owners of the s.s. St. Pierre Miquelon, a French vessel, owned in St. Pierre, Miquelon, and formerly engaged in the mail service between the island and Canada, appealed to the Supreme Court, Oct. 16, against the judgment of the Nova Scotia courts, by which they were held responsible for the loss of the s.s. Renwick, which was sunk and lost off Egg island, near Halifax, Dec. 26, 1911. The judgment of the lower courts was upheld, and the St. Pierre Miquelon held solely responsible for the collision and subsequent loss.

The Boston and Yarmouth Steamship Co., which was recently incorporated to take over the Dominion Atlantic Ry. steamships, will enlarge the berthing capacity of the steamships Prince Arthur and Prince George, and will probably put into service next year the steamship Old Colony. A. E. Williams, heretofore agent, Dominion Atlantic Ry., Yarmouth, N.S., will continue to act as agent for the steamship company, and it is reported that J. Bent will be appointed wharfinger there, replacing J. B. Killam. The steamships Prince Arthur and Prince George have been transferred from the British to the Canadian register.

Plans and specifications for the new wharf at Carleton, N.B., for the Marine Department were recently completed, and tenders were to be received Nov. 1 for the carrying out of the work. The harbor face of the wharf is to be 445 ft. from Middle street, and there will be four cribs, one being 199 ft. long, and outside of this there will be an angle crib 74½ ft. on either leg, carrying the wharf to the harbor line and forming a little more than half the face. The other half will be an angle crib, 68 ft. long on either leg, making the wharf face a total length of 143 ft. The fourth crib forming the southern anchorage will be 100 ft. long.

The Dominion Coal Co. is reported to have decided to carry out considerable improvements in connection with its coaling plant at Halifax. The present sheds there are to be cleared away, and the latest appliances for handling coal to and from vessels are to be installed. Three towers are to be erected, of wood and steel, running on rails along the wharf, and each tower will be 90 ft. high and have a 65 ft. boom attached with a clam bucket arrangement with capacity of at least one ton of coal. With these towers working, it is estimated that 200 tons of coal can be taken from a vessel each hour, and 1,500 tons hunkered in 10 hours.

Province of Quebec Marine.

The Department of Naval Service recently received tenders for the erection of a wireless telegraph mast at Father point.

The chief of the Quebec fire brigade has recommended the purchase of a steamboat, equipped with fire fighting appliances, for use in the harbor and along the water front.

The Montreal Transportation Co.'s steamboat Windsor broke one of her wheels, and collided with a stone pier in the Lachine canal, while on the way to Montreal, Oct. 12.

The Montreal Harbor Commissioners recently offered for sale, the wreck of the steamboat Florida, which was burnt to the water's edge at Victoria pier, and abandoned, July 7.

Press reports from Quebec state that W. Price and J. B. E. Letellier of Quebec, and A. Gravel of Levis, have been appointed as the new Harbor Commission for Quebec, with the first named as chairman.

An order in council has been passed granting permission to re-register the s.s. Turret Bell, No. 104263, at the port of Quebec, all requirements having been complied with, and also changing its name to Kwasind.

The Quebec Harbor Commissioners received tenders, Oct. 21, for the construction of a 1,000,000 bush. capacity grain elevator with marine tower and shipping apparatus, on the Princess Louise embankment.

Traffic on the Lachine canal, which was interrupted, Sept. 24, by the carrying away of the gates of St. Gabriel lock, by the Canadian Lake Line steamboat Nevada, was resumed Sept. 26, on the completion of the work of replacing them.

It is announced that work will shortly be commenced on the enlargement of the G.T.R. elevator at Windmill point, Montreal harbor, by the addition of storage bins for a further 700,000 bush., giving it a total capacity of 1,700,000 bush.

A. Johnston, Deputy Minister of Marine, on his return from an inspection trip around the Magdalen islands, Anticosti, St. Pauls, and the north shore of the St. Lawrence, recently, is stated to have recommended a more modern light than is at present being used for buoys, range lights, etc.

The act creating a new harbor commission for Quebec, to consist of three members, displacing the former board of nine, came into effect, Oct. 13, by proclamation. The new board, according to local press reports, will consist of W. Price, chairman, J. B. E. Letellier and A. Gravel.

The Public Works Department, during November, will receive tenders for the construction of an extension to the wharves at Ste. Anne de la Pocaterie and Cap a l'Aigle; for extension to the pier at Kamouraska; for a wharf at Ste. Victoire, and for wharves and dredging at Rimouski, Que.

An Ottawa report of Oct. 12 states that as a result of the recent visit of cabinet ministers to Quebec the Government will undertake the construction of a dry dock there as an ordinary public work. It is said that if it is so undertaken, arrangements will be made with the shipping interests for its operation.

G. W. Stephens, Chairman, Montreal Harbor Commission, in an interview, is reported to have stated that he had nothing to say for publication on the subject. The resignation of the other two members of the commission, L. E. Geoffrion and C. C. Ballantyne, had previously been announced by the Minister of Marine.

The floating dry dock, Duke of Connaught, for the Canadian Vickers, Ltd., plant at Montreal, which arrived at Sydney, Oct. 22, and which was towed across the Atlantic by the two Dutch tugs Zwartee Zee and Roode Zee, was insured for the passage for £200,000. A complete description of the dry dock was given in Canadian Railway and Marine world for October.

A proposal to build a marine railway at Sorel, has been promised favorable consideration by the Minister of Public Works. In connection with the scheme, Sir Rodolphe Forget, President, Richelieu and Ontario Navigation Co., stated at Sorel, Oct. 2, that if the government would carry out the work, his company would pay the interest on the capital cost.

Canada Cement Transport, Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital, and office in Mont-

real, to own and operate vessels, and carry on a general navigation and forwarding business. The incorporators are, W. J. Shaughnessy, C. G. Heward, A. Charters, Montreal; A. E. Woodworth and A. B. Wright, St. Lambert, Que.

The Shipping Federation of Canada, the Montreal board of trade and the chamber of commerce, are considering the question of arranging a meeting of representatives of the three bodies, with a view to making representations to the government, so that they may recommend a practical representative of the marine interests for the Harbor Commission, two members of which are retiring shortly. The two retiring members are L. E. Geoffrion and C. C. Ballantyne.

The number of permits for the passage of vessels through the Lachine canal, from the commencement of navigation this year to the end of September, was 4,665, against 4,319 for the same period 1911. The merchandise passing through, during September, included, wheat, 3,100,158 bush.; oats, 1,380,827 bush.; flour, 125,529 barrels; eggs, 2,066 cases; butter, 827 packages; cheese, 37,758 boxes, apples, 6,734 barrels. Increases over the figures for Sept., 1911, were shown in each case, that for wheat being approximately 50%.

Henri Menier, of Paris, France, who owns Anticosti island, in the Gulf of St. Lawrence, and who is carrying on extensive lumbering and fishing operations, is operating one steamship, Savoy, which he owns, and has three other steamships on time charter, viz.,—Norhilda, Querida and Thyra Menier. Four more steamships are to be chartered for next year. Shipments of pulpwood have also been made on a number of other vessels, including the Saskatoon, Renvoyle and Mapleton, the destinations having been lake ports as for Niagara Falls, N.Y., and on the Atlantic coast to Portland.

Ontario and the Great Lakes.

H. B. Smith, of Owen Sound, Ont., is reported to have been elected a director of the Richelieu & Ontario Navigation Co.

The Peoples Line steamboat Frontier, formerly Argyle, has been attached, at Toronto, for unpaid wages. The crew claim that their wages have been unpaid for two months.

Orders in council have been passed changing the names of the steamboats Active, and Marina, to Charlie Gale, and George A. Graham, respectively. The port of registry of the former is Amherstberg, and of the latter, Port Arthur.

Hon. F. Cochrane, Minister of Railways and Canals, inspected the proposed route of the new Welland canal, early in October, and is reported to have stated that as the plans had been passed, tenders would be called for very shortly.

The Great Lakes Dredging Co. is reported to have placed an order at Port Arthur, for the construction of a large ice breaking steam tug, about 20 ft. longer than the James Whalen, with a cement hull and powerful engines.

The steamboat Britannic, which went ashore at Weavers point, just below Morishurg, Aug. 24, was released, Oct. 9, and taken to Prescott. She will probably be taken to Kingston later, for repairs. She is owned by H. McMorran, Port Huron, Mich.

The Dominion Public Works Department has awarded the contract for the dredging of about 95,000 cubic yards at Port Arthur and in the vicinity, to the Great Lakes Dredging Co. A considerable portion of the dredging will take place in the neighborhood of the dry dock.

The Ontario and Quebec Navigation Co.'s steamboat Lloyd S. Porter, with a barge in tow, went ashore on Morgans point, about six miles west of Port Colborne, Oct. 13. The steamboat was released without damage, but the barge could not be removed, and she subsequently went to pieces.

The C.P.R. terminal elevator B, at Fort William, has been turned over to the Grain Growers' Association, who are now operating it, with the old staff. The elevator has a capacity of 2,500,000 bush. The Grain Growers' Association is expecting to secure control of other terminal elevators in the near future.

An Ottawa press dispatch of Oct. 14, states that it has been decided to have the steamboat Dollard, which is under construction for the St. Lawrence lighthouse service, at Kingston, Ont., equipped with an oil fuel burning apparatus. This will be the first vessel in the government service to be so equipped.

S. Brisbane, who has been chief engineer on vessels of the Northern Navigation Co., for several years, and since the construction of the Hamonic, in charge as chief engineer on her, has been appointed shore engineer, and will spend most of the winter at Port Arthur overlooking the building of the company's new vessel there.

The U. S. steamboat Wm. C. Moreland, which sank in Lake Erie in 1910, and which was salvaged and taken to Sarnia, was recently towed to Windsor, where, after the stoppage of the pumps, she again sank. It is said that she will be permitted to lie where she is until a purchaser can be found for her engines, which are stated to be in good condition.

The Detroit and Cleveland Navigation Co. has signed a lease of the docks at Port Stanley, for one year, and it is stated that on the reopening of navigation in the spring, a daily steamboat service will be put on from Port Stanley. A clause has been inserted in the lease, providing for the purchase of the docks at the end of the year, under certain conditions.

A Fort William press dispatch states that as a result of a recent visit of Sir Rodolphe, President, and James Playfair, director, Richelieu and Ontario Navigation Co., to Fort William, it is likely that some developments will take place in local marine circles. It is stated that some land has been secured along the Kaministiquia river, which it is thought will be utilized for the company's purposes.

The channel between Wood Island and Wallace island, in the St. Lawrence river, has recently been improved by cutting off the north extreme of the islet and shoal north of Wallace island, and the south extremity of the shoal extending south from Wood island, including the most southerly rock. The channel can safely be used by upbound vessels provided they keep in mid channel, but down bound vessels should use the U.S. channel.

The U. S. Lake Survey reports the levels of the great lakes in feet above tidewater, for September, as follows:—Superior, 602.53; Michigan and Huron, 580.67; Erie, 572.48; Ontario, 246.38. As compared with the average September levels for the past ten years, Superior was 0.27 ft. below; Michigan and Huron, 0.19 ft. below; Erie, 0.70 ft. above, and Ontario, 0.36 ft. above. It was anticipated that during October Superior would remain stationary, while the other levels would fall 0.2 ft.

The Northern Navigation Co. intends making some considerable additions to its facilities at Point Edward, including the erection of a combined storehouse and cold storage plant, built of wood with concrete

foundation. The building will be 90 by 60 ft. A laundry building of reinforced concrete to replace the present building at Sault Ste. Marie will also be erected, and the extension of the westbound dock and warehouse to double its present capacity will also be undertaken. The cost is estimated at \$50,000.

The U. S. War Department received tenders, Oct. 31, for work on the St. Marys Falls canal, comprising the removal of timber work and all soft and broken rock along about 520 ft., on the south side of the canal, from near the east side of Magazine street, westward to the present concrete wall, and the building of a concrete wall on top or the rock. The estimated quantities cover 4,000 cub. yds. of excavation, 3,700 cub. yds. of concrete, exclusive of cement, 2,500 lin. ft. of drilling and grouting, 1,400 cub. yds. of backfilling, and about 4,400 barrels of cement.

The Toronto Ferry Co.'s ferry steamboat Kathleen was practically destroyed by fire, while in dry dock at Toronto, Oct. 12. The damage is estimated at \$7,000, which is covered by insurance. L. Solman, Manager, is reported to have stated that it is highly improbable that she will be rebuilt. She was built at Toronto in 1886, and was the last of the vessels which the Toronto Ferry Co. took over from A. G. Tymon. She was screw driven by engine of 35 n.h.p. Her dimensions were, length 84 ft., breadth 18 ft.; depth 5.5 ft., tonnage 110 gross, 72 register.

The buoys marking the east side of the deeper, or west, channel have been moved to the eastward of the Ballard reef channel in the Detroit river, to give a greater width to the channel. The two northerly gas buoys and the two intermediate spar buoys are moved to mark a line 50 ft. east of the former positions, and the south gas buoy is moved 150 ft. east of its former position. The width of the deep west channel is 350 ft. abreast of the area under improvement at its north end and 450 ft. at the south end abreast of the entrance to the Livingstone channel.

A considerable amount of dredging has been carried out in Fort William harbor during the present year. Since the opening of navigation, seven large dredges and three clam-shells have been working continuously, and it is estimated that between 30,000 and 40,000 cubic yards of solid earth have been dredged each day, in the deepening and widening of the channels. The McKellar river has been dredged its whole length and widened from 95 ft. to about 400 ft., and deepened to 25 ft. The Mission river has been widened from 300 ft. to 500 ft. throughout its length, and deepened to 30 ft. The Kaministiquia river has been widened by 100 ft. from the Mission turning basin to Thunder bay, and is now 500 ft. wide, with an average depth of 30 ft.

Manitoba, Saskatchewan and Alberta.

The steamboat Mount Cashel, owned by E. A. Moore, Winnipeg, was badly damaged by fire on the Red river, near the Main street bridge, Oct. 12. The whole of her upper portion was burned, the damage being estimated at \$20,000, which is covered by insurance. She was built this year for pleasure service on the river and lake and had 78 staterooms. Her cost is said to have been about \$180,000.

The Hyland Navigation and Trading Co.'s steamboat Winnitoba, was destroyed by fire, at Winnipeg, Sept. 29. She was built at St. Boniface in 1909, and was paddle wheel driven with engine of 21 n.h.p. Her dimensions were, length 170 ft., breadth

28.5 ft., depth 7 ft.; tonnage, 883 gross, 556 register. J. L. Hyland, President, is reported to have stated, Oct. 3, that nothing definite had been settled about building another vessel to replace her, but it was probable that one would be built, to be ready for service about next June.

A Winnipeg press report states that a proposition is under consideration to connect Portage la Prairie with Lake Winnipeg, and says that at a comparatively small outlay, the town could be connected by waterways with the North Saskatchewan river. A 2½ mile channel through Meadow portage would connect Lakes Manitoba and Winnipegosis, and the deepening of a similar channel, which has during high water periods been navigated by Hudson's Bay Co.'s vessels, would connect Lake Winnipegosis with Cedar lake, which is an extension of the North Saskatchewan river, above Grand Rapids. A canal from Delta to Portage creek would complete steamboat navigation to Edmonton.

British Columbia and Pacific Coast Marine.

The G.T. Pacific Coast Steamships Co.'s s.s. Prince George will be withdrawn from the service between Victoria, Prince Rupert and Stewart, Nov. 1, and placed in the dry dock at Esquimalt for general overhauling and repairs. On the completion of these, she will take the place of the s.s. Prince Rupert, which will be similarly overhauled.

The city of New Westminster is applying to the Dominion parliament for an act providing for the future management of the port of New Westminster, the tidal waters of the Fraser river, and all the water front property along them and adjacent waters, and to constitute the New Westminster Harbor Commission.

The Coquitlam Shipbuilding and Marine Railway Co., recently incorporated with \$500,000 capital and office at Vancouver, B. C., is reported to have begun the erection of buildings near the junction of the Pitt and Fraser rivers, at Coquitlam, where a general shipbuilding business will be engaged in when the plant is completed. L. D. Shaffner, Bridgeton, N.S., is chiefly interested in the project.

The municipalities of Richmond, South Vancouver, Burnaby and Point Grey are applying to the Dominion parliament for an act constituting the waters of the north arm of the Fraser river, lying west of the westerly limits of New Westminster, together with all the branches and arms, to lines drawn across the points of land forming the mouths of the outlets of the north arm, and branches emptying into the Gulf of Georgia, with the waters of the Gulf of Georgia, adjacent thereto and known as Sturgeon bank, as a harbor under the name of North Fraser harbor, to provide for the management of the harbor, the appointment of the North Fraser Harbor Commission and defining its powers.

Largest Freighters in the World.—The largest vessels in the world designed for carrying freight exclusively are the Col. James M. Schoonmaker and the William T. Snyder, Jr., built for operation on the Great Lakes. They measure over all 617 ft., molded beam 64 ft., molded depth 33 ft., with a deadweight carrying capacity at 20 ft. draught of 13,200 tons. They carry water ballast in side tanks and in a double bottom which is 6 ft. deep. The total water ballast capacity is 9,440 tons. Each vessel is equipped with a quadruple expansion engine of vertical inverted type with an estimated horse power at 90 revolutions per minute of 2,600.

An Electrically Propelled Vessel for the Canadian Lakes Trade.

Canadian Railway and Marine World for September, contained some details of the vessel, which is to be electrically driven, and which is under construction at Newcastle, Eng., for the Montreal Transportation Co. The following additional details will be of interest:—

The engine, which is of the Diesel four cycle principle, has six cylinders 12 in. diam., and a stroke of 13½ ins., giving 400 revolutions a minute. The cylinders cranks are so arranged that the firing occurs at equal intervals. The engine is entirely enclosed, and the forced lubrication is arranged for by a valveless pump driven from an eccen-

compressor on the engine, which also supplies the compressed air for forcing the fuel oil into the cylinders. A patent arrangement for the prevention of the accumulation of fuel oil in the valves is provided. A small fly wheel is used, sufficiently heavy to ensure steady running, etc. Cooling water is circulated through the cylinder and compressor jackets by a rotary pump drawing directly from the sea, and is driven by mitres geared from the compressor end of the crank shaft. The air for the main cylinders is taken through the bed plate. Under normal operation the engines will run under governor control at 400 r.p.m., but

electrical connections, apart from its attachment to the propeller shaft. The stationary part of the motor has two separate windings for 30 and 40 poles respectively, which are mutually non-inductive, thus exercising no influence on one another, and they work independently on the magnetic circuit of the motor. When these windings are connected respectively to the appropriate generator, the synchronous speed due to each is 80 r.p.m. when at full speed. By changing the connections the rotation is reversed, and by connecting the 40 pole winding to the 6 pole generator, the synchronous speed drops to 60 r.p.m., thus giving about three-quarters speed. One generator may be stopped and the other

Arrangement of Machinery in Diesel-Engined Ship with Electric Drive for the Montreal Transportation Co.

tric on the crank shaft at the compressor end. The second motion shaft is driven by a worm wheel on the crank shaft midway between the centre cylinder through a vertical shaft, which carries the governor at the upper end. This second motion shaft, which is at the front of the engine, and carries the cams for working the valves, also carries the eccentrics driving the two fuel pumps. This enables the power to be evenly divided between the cylinders. The compressor is driven from the main crank shaft, and is mounted on the bed plate extended for the purpose. The engine is started by compressed air stored in receivers placed near the engine, supplied by the

the speed can be adjusted by the governor so that it may maintain a rate considerably below this if required.

The electric equipment consists of two three-phase generators giving 235 kilovolt-amperes at 500 volts alternating, each. They have six and eight poles respectively, giving frequencies of 20 and 26.6 per second. An exciter is connected to the shaft of each generator, which when working normally gives about 30 amperes at 100 volts, and is arranged for a considerable overload. Coupled direct to the propeller shaft is a single three phase motor, developing 500 shaft h.p. The motor is of the simple squirrel cage type without any mechanical or

left running at full speed under governor control, giving approximately its full economy, as the power required to drive at three-quarters speed is about half what is required to drive at full speed. If either of the generators be left attached to its own winding, the other being shut down intentionally or by accident, the vessel is propelled by either engine at a little over half speed, the speed of the vessel dropping with the rotation of the engine until an automatic adjustment of power and speed is reached, which occurs at about half speed. The control gear, which will not be operated from the bridge as a regular thing, but which is being so arranged that such opera-

tion can be carried out when desired, has five positions on the switch, similar to those of the ordinary engine room telegraph, each position being definitely fixed by cams and rollers so that a stoppage at an intermediate position is prevented. For half speed, no. 1 generator is coupled up to no. 2 winding of the motor, and no. 2 generator is running light or stopped; for full speed each generator is connected to its own winding in the motor. The controlling gear provides for the interruption of the excitation of the generators while the switch is being moved from one step to another. This method of operation renders the electric circuits dead while the switching over operation is being carried out and injurious sparking is avoided.

Two steam boilers are provided for operating the deck equipment, steering gear, electric lighting and heating. Fuel oil is used for the boilers. It is estimated that the vessel will carry about 250 tons more than a similar vessel equipped with reciprocating engines, and she is designed to carry 2,400 tons deadweight of cargo, fuel, fresh water and stores on a 14 ft. draught.

Her dimensions are, length between perpendiculars 250 ft., length over all 256 ft., breadth extreme 42½ ft., depth moulded 19 ft., forecastle 48 ft., poop deck 42 ft., speed 9 knots an hour.

The foregoing is adapted from the Marine Review.

Navigation Matters on the Yukon River

O. L. Dickeson, President White Pass and Yukon Route, has announced that the company will extend its Yukon river steamboat service next year to Fairbanks, Alaska, about 800 miles northwest of Dawson.

A Pacific Coast correspondent writes us that the additional service may be provided by putting in operation some more boats, which are idle at White Horse, Yukon. This, however, being contingent upon the U.S. Government opening Fairbanks as a subport of entry for these vessels. If this is not conceded, it is expected the company will build two more boats at Seattle, Wash., which will be shipped to White Horse in sections and put together there.

In the early rush to the Klondike, before the White Pass and Yukon route was entirely completed, there were a large number of people rushing into Dawson seeking gold, and it looked as though navigation would be closed, due to weather conditions, before a sufficient amount of supplies could be handled into Dawson to take care of the population. Hence the Canadian Government issued an order permitting United States bottoms to handle goods into Dawson as a free subport of entry. The necessity, however, for issuing this order, as it turned out, never existed, nor does it exist to-day, although no action was taken to have the Government rescind the order to protect British capital against the invasion of U.S. capital in British territory. This has given the U.S. company such a decided advantage over the British company that the British Yukon Navigation Co., Ltd., made application to the U.S. Government to be accorded a similar courtesy in the opening of Fairbanks as a subport of entry and thus enable it to establish a competing service, which is very badly needed all through the lower Yukon river country.

No decision has yet been given at Washington, but it is stated that the Collector of Customs for Alaska has reported adversely on the matter to the Secretary of the Treasury. The Fairbanks Commercial Association has petitioned the President of the U.S. to take favorable action in the matter, owing to the fact, according to peti-

tion, that the people who control the transportation facilities likewise control a large part of the merchandising business, thus making it very important for the protection of independent merchants to have another transportation company. Should the President refuse the request it will be most unjust discrimination, for as above pointed out the U.S. has enjoyed a similar courtesy at the hands of the Canadian Government for a number of years and it will most certainly be the Dominion Government's duty to withdraw the privileges under which United States steamboats can go to Dawson.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

79. Sept. 18. 216. Nova Scotia, Bay of Fundy, Lurcher shoal lightship, intended change in characteristic of fog alarm. 217. New Brunswick, east coast, North Tracadie gully, buoy established. 218. Quebec, Gulf of St. Lawrence, Harrington islands, Harrington harbor, changes in buoyage. 219. Quebec, River St. Lawrence, Saguenay river entrance, Bar reef, bell buoy established.

80. Sept. 19. 220. British Columbia, Burrard inlet, Vancouver harbor, Burnaby shoal, light and fog bell established on a float, caution. 221. British Columbia, Observatory inlet, Granby bay, Graves point, light established.

81. Sept. 23. 222. Ontario, Georgian bay, Victoria harbor, Port McNicoll, buoyage. 223. Ontario, Georgian bay, Byng inlet, buoys established. 224. Ontario, Lake Nipissing, North Bay, light established on wharf.

82. Sept. 26. 225. Nova Scotia, Cape Breton island, east coast, Sydney harbor, south arm, Sydney, Battery point range lights established. 226. Quebec, River St. Lawrence, St. Thomas channel, change in color of starboard gas buoy lights. 227. Newfoundland, east coast, Conception bay, Western bay head, change in character of light.

83. Sept. 27. 228. Ontario, Lake Erie, Port Colborne, light exhibited on eastern breakwater. 229. Ontario, Lake Superior, Thunder cape fog alarm, direction in which horn points. 230. Ontario, Lake Superior, Thunder bay, Fort William, off mouth of Kaministiquia river, gas buoy replaced by gas and bell buoy. 231. Ontario, Lake Superior, Thunder bay, Mutton island, Burke shoal, buoys established.

85. Oct. 1. 234. Ontario, River St. Lawrence, Thousand islands, Fiddlers Elbow, shoal being dredged, gas buoy removed, new channel opened. 235. Ontario, Detroit river, Ballard reef channel, increased width of available deep channel, buoys moved. 236. Ontario, Lake Huron, chart issued, Cove island to Duck islands. 237. Ontario, Lake Huron, chart issued. Duck islands to Detour passage.

86. Oct. 3. 238. Quebec, Gulf of St. Lawrence, Ste. Anne river, Ste. Anne des Monts, light established on pier. 239. Quebec, River St. Lawrence, Orleans island, south shore, St. Francois wharf, light established.

87. Oct. 4. 240. Nova Scotia, Cape Breton island, Cape North light station, fog alarm destroyed by fire.

88. Oct. 7. 241. Quebec, Ottawa river, Ste. Anne de Bellevue, third range light established. 242. Quebec, Ottawa river, Chute a Blondeau, range lights established.

89. Oct. 12. 243. Quebec, Saguenay river, east of river Caribou, Savard range lights discontinued. 244. Quebec, Saguenay river, change in position of river Caribou range lights. 245. Quebec, Saguenay river, Simard range lights established.

90. Oct. 16. 246. Quebec, River St. Lawrence, Ile Verte, range lights established. 247. Newfoundland, south coast, Placentia bay, Tides Cove point, fog signal established. 248. United States of America, Maine, Moose Peak light station, fog signal established. 249. Ireland, east coast, Ross-lare harbor approach, South Long bank buoy, replaced by light and bell buoy.

91. Oct. 18. 250. New Brunswick, south coast, Bay of Fundy, Sisters rock, buoy established. 251. New Brunswick, Chignecto channel, Cumberland basin, eastward of Amherst basin, buoy established. 252. Nova Scotia, Bay of Fundy, Lurcher shoal, lightship replaced on her station. 253. Nova Scotia, south coast, Aspotogan peninsula, shoal off Bayswater, buoy established. 254. Prince Edward Island, east coast, Cardigan bay, Georgetown harbor, daymark on Georgetown back range lighthouse. 255. Prince Edward island, south coast, Hillsborough bay, Haszard point, daymarks on range lighthouses. 256. Prince Edward Island, south coast, Hillsborough bay, Charlottetown harbor, daymarks on Brighton beach range lighthouses.

The Canadian Interlake Line's Vessel Fordonian.

This vessel which has been built at Port Glasgow, Scotland, by the Clyde Shipbuilding and Engineering Co., Ltd., has already been partly described in Canadian Railway and Marine World, and is of special interest as the first of her type to be built in Great Britain. She is 250 ft. long, 42½ ft. beam and 26½ ft. deep to awning deck. The special feature is that she has been fitted with oil motors of the Carls-Diesel type. The engines are of the two cycle type, and have a brake horsepower of 750, which is equal to an indicated horsepower in a steam engine of 875.

The trial trip took place Sep. 21. We are advised that from the time of starting off the engines at 8 a.m. they were never stopped, excepting by the orders from the pilot on the bridge, until 9 p.m. Several runs on the Firth show the vessel to have a speed of 10 knots, although only developing considerably under the maximum power. During the whole of the trials the engines worked very satisfactorily and very smoothly. Vibration in the ship was practically nonexistent. Representatives from the British Admiralty, Imperial Japanese Navy, Australian and Canadian steamship owners, and very many of the principal shipping companies in Great Britain and Ireland were present, and to the majority of them the smooth and satisfactory working of the machinery was a revelation. During the course of the trials, the engines were tested for manœuvring purposes, and were put through a very severe test. During 40 minutes, 61 manœuvres were executed, this being a much more severe test than a steam engine is usually subjected to, but the whole performance was carried out with very commendable dispatch, and with great satisfaction. The time occupied in going from full speed ahead to full speed astern was eight seconds.

After the trial trip the vessel returned to Glasgow to load, and after further runs on the measured mile, which were satisfactory in every way, sailed Sep. 28 for Canada. On Oct. 21 it was reported that the vessel had met with an accident in the Irish channel, and had put back for Glasgow.

V. W. Ferneret, Superintending Engineer, St. Lawrence ship canal, has been appointed a member of the Lighthouse Board, in place of Capt. L. A. Demers, recently appointed harbor master at Montreal.

Registration of Terminal Elevator Warehouse Receipts.

Under the provisions of the Canada Grain Act, an order in council has been passed approving of the rules and regulations and fees in connection with the registration of terminal elevator warehouse receipts, as adopted by the Board of Grain Commissioners. These provide that as soon as possible after Aug. 31, in each year, statements of all outstanding warehouse receipts, and of car lots and parcels of grain for which no receipts have been issued, shall be sent to the Deputy Registrar. The warehouseman shall issue to the person entitled to receive it, a warehouse storage receipt for each individual car load or parcel of grain, subject to his order, stating the date of receipt of grain in store, quantity and inspected grade, that grain has been received

and stored with grain of the same grade by inspection, that the grade is deliverable on return of receipt properly endorsed by the person to whose order it was issued, and on payment of charges for storage and transportation, if any. Every warehouse receipt, before being delivered to the party entitled to receive it, shall be tendered to the Deputy Registrar by the warehouseman, for registration, and shall be accompanied by a list setting forth the number of each receipt, the date, the ex car number, kind and grade, gross weight, dockage and net weight, and the name of the elevator issuing receipt. No grain shall be shipped from any terminal elevator by the warehouseman, and no grain shall be delivered by the warehouseman unless the covering warehouse storage receipts be surrendered by the shipper to the warehouseman. When any grain is delivered or shipped from a terminal elevator, the operator shall tender to the Deputy Registrar for registra-

tion for cancellation, registered warehouse storage receipts covering the same both as to quantity and grade, and showing number of receipt, date out of store, amount, grade and kind of grain. As soon as possible after shipment, in no case, except through unavoidable delay, exceeding three days, the owner, lessee or manager of every terminal elevator shall furnish the Warehouse Deputy Registrar weekly with a correct statement of the amount of each kind and grade of grain received in store in his elevator during the week, also the amount of each kind and grade of grain delivered or shipped. Each terminal elevator shall pay to the Board of Grain Commissioners 4c. per 1,000 bush. for inward registration, and 4c. per 1,000 bush. for registration for cancellation. At the end of each month the Board shall render each terminal elevator an account of such fees, and such account shall be paid before the 10th of the following month.

The Canada-Australia Mail Line s. s. Niagara.

Following is a condensed description of the s.s. Niagara, built for the Union Steamship Co., of New Zealand, for the mail route between Canada and Australasia, and which was recently launched at Glasgow, Scotland, by the Dominion Premier's wife, Mrs. Borden.

Length over all, 543 ft.; breadth, moulded, 66 ft.; depth to upper deck, 37½ ft.; depth to boat deck, 64 ft.; gross tonnage, 13,000 tons. Though chiefly designed for passengers, a considerable space will be devoted to cargo, which will be handled to and from the holds by hydraulic hoists, a large part of the hold space being insulated for the carrying of frozen meat, fruit and other perishable commodities. Accommodation will be provided for 281 first class passengers on the main, upper, shelter and promenade decks, amidships, where state rooms are arranged for from one to four passengers, and also in suites. The dining saloon will have accommodation for 190 passengers, arranged in small parties. A large lounge will be placed on the promenade deck, and there will be an electric elevator between the main and promenade decks. The second class accommodation will be for 210 passengers, and will be placed aft, with the dining room on the upper deck, and music and smoke rooms above. Third class passenger accommodation for 176 will be placed forward. Special care has been taken to adopt the best means for heating and ventilating the vessel, having regard to the varying climates she will pass through on her voyage between Australia and Canada. The thermo-tank system has been adopted which will insure an even temperature throughout the trip. These tanks are designed to change the air in any of the compartments to which they are connected, ten times an hour, and will supply a continuous supply of fresh air to all the living quarters in the vessel, which can also be heated to any temperature. The installation will consist of 19 thermo tanks. The lifeboat accommodation will be more than sufficient to provide for all the passengers and crew, and will be equipped with the latest improved davits, chocks and disengaging gear. A wireless

telegraph installation and the latest fire extinguishing appliances will also be included in the equipment.

The machinery will comprise a combination of reciprocating engines and low pressure turbines. Steam will be supplied by ten cylindrical boilers, each fitted with four furnaces and forced draught. The working steam pressure will be 220 lbs. The furnaces will be so arranged that either oil or coal may be used as fuel, the intention being to use oil, and there will be sufficient capacity to carry oil for the return trip, and also for a supply of coal should it be found necessary to use it. A complete electric lighting plant will be supplemented by an emergency plant placed on the boat deck, so that in case of accident, light may always be maintained.

Electric Propulsion for Ships.

Electric ship propulsion will shortly receive its first trial, for a naval fuel ship, Jupiter, equipped for such driving, was launched recently at the U.S. navy yard at Mare island. The new system is being given a good trial, for this ship is 572 ft. long, 65 ft. beam, draws 27½ ft. loaded and will carry 12,500 tons of coal and 375,000 gal. of fuel oil. Her object, aside from her duty as a fuel carrier, is to demonstrate that economies in fuel consumption on turbine ships can be obtained by using turbo generators furnishing current to motors on the propeller shafts, instead of connecting the turbines directly to the shafts. In the latter combination the efficient speed of the turbine and of the propeller are not the same, and a compromise has been made by raising the propeller speed and decreasing that of the turbine. The propeller is not so efficient as at lower speed, and the weight of the turbines has been greatly increased. By using an electric drive the turbine can be kept down to the dimensions and up to the speed of stationary practice; by using two motors on each shaft all the requirements for propeller efficiency at any speed, ahead or astern, can be readily met. The design of the motors for the Jupiter is not known in detail, but those interested in the general subject will find an important discussion of it in a paper by Mr. Emmet before the American Institute of Electrical Engineers

in February, 1911, in which he explained the details of a design developed by the General Electric Co. for a battleship. According to his figures the total efficiency in pounds of steam per horsepower on the shaft would be substantially constant at speeds ranging from 12 to 21 knots, and far better than ordinary turbine propulsion could show. The total weight of the mechanical equipment of the ship was not lowered by this system of propulsion. The trials of the new ship will be awaited with interest, because the trials of the alternative method of reducing speed between the turbine and the propeller, involving enormous gears, were not wholly successful owing to defective parts in the machinery, something particularly serious in such mechanism. It is doubtless true that the gear transmission will save a great deal of weight in comparison with the electric system, but if the claims made for the efficiency of the latter are borne out in the Jupiter's trials its advocates will be able to make some decidedly pretty arguments when the respective merits of the two systems come up for discussion again.—Engineering Record.

Vessels Removed From the Register.

The following vessels were removed from the register, during August, for the reasons assigned:—Steam—Edna, Vancouver, B.C., 12 tons, dismantled; Hazelton, Victoria, B.C., 236 tons, dismantled; Lara, New Westminster, B.C., 5 tons, dismantled; Rockland, Ottawa, Ont., 50 tons, dismantled; Sea Wolf, Vancouver, B.C., 20 tons, burned. Sailing—Annie Smith, Paspebiac, Que., 249 tons, abandoned; Arclight, Charlottetown, P.E.I., 103 tons, sunk; Dorothy Louise, Shelburne, N.S., 125 tons, missing; Energy, Lunenburg, N.S., 97 tons, stranded; Eva Stewart, Parrsboro, N.S., 98 tons, broken up; Jessie D., Parrsboro, N.S., 8 tons, broken up; Kalevala, Sydney, N.S., 10 tons, wrecked; Laura, Liverpool, N.S., 299 tons, transferred to Barbadoes; Lion, Magdalen Islands, Que., 42 tons, broken up; May Myree, Lunenburg, N.S., 89 tons, stranded; Rosa, Montreal, 140 tons, burned; Seth, Jr., Liverpool, N.S., 199 tons, sold to foreigners. Colon, Panama; Thurston, Parrsboro, N.S., 61 tons, broken up; Trader, Parrsboro, N.S., 73 tons, broken up.

Stranding of the s.s. Lake Champlain.

The following judgment was delivered Sept. 6, by Commander H. St. G. Lindsay, Wreck Commissioner, in the matter of the stranding of the C.P.R. s.s. Lake Champlain, in the St. Lawrence river, near Dominion park, Montreal, Sept. 3. The finding was concurred in by Capt. F. Nash, and T. Perron, pilot, who acted as nautical assessors.

The cause which led to the stranding was an error of judgment on the part of L. Z. Bouille, the pilot, being deceived by the glare of light from the north shore, in calculating his distance from Longue Pointe buoy on rounding same, and on account of the leading lights and all other lighted buoys in the channel to the westward being obscured by smoke or passing mist, being unable to judge his position accurately, and thinking he was too far to the north side of the channel. The court is of opinion that, under the circumstances, it is not necessary to deal with his license, and recommends that greater care should be exercised in future under all conditions, and speed reduced when any uncertainty as to the position of the vessel prevails. The court also suggests that seeing the conditions which prevailed at the time of the accident with regard to lights being obscured, are not unusual and are not likely to improve, range lights to the eastward, if such could be arranged, would be of great service under similar weather conditions, for vessels either up or down bound, and it would also recommend that compass courses be used when applicable in navigating the long stretches of the river, and is of opinion that had a compass course been set after rounding Longue Pointe buoy, the accident would in all probability not have occurred.

Shipbuilding in British Columbia.

The Victoria Board of Trade's committee on trade, commerce and transportation has recently reported that it considers it desirable that the board should renew its efforts to prevail on the Dominion government to encourage shipbuilding in Canada, claiming that Canadian shipbuilders suffer a great disadvantage in being in competition with British shipbuilders, in consequence of British built vessels being admitted into Canada duty free. The wages paid in Canada are higher than in Great Britain, owing to the tariff, and in addition, material has to be imported, and duty, ranging up to 52%, paid thereon, representing on a properly equipped vessel, approximately 15% of the total cost. In case of government work, the fair wage clause which is inserted in the tender form, imposes a serious handicap on British Columbia shipbuilders in competing with eastern shipbuilders, and an even greater handicap in competing with British shipbuilders. No allowance seems to be made when considering tenders, for the duty which the Canadian shipbuilders have to pay another department of the government on imported materials required for the construction of the vessel. The board of trade directed the government's attention to these conditions in 1906 and about the same time brought the matter to the notice of the Royal Commission on Transportation, with the result that that body made a recommendation in favor of protection for Canadian shipbuilders. The committee recommends that the board of trade obtain from the Pacific coast shipbuilders a definite statement in support of a request for a bonus, say equal to the difference of cost of construction, or, at

least, the admission into Canada duty free of all the materials required in the construction of a vessel. The committee also urges strongly the importance of developing shipbuilding on a large scale, which would create a large field for subsidiary enterprises.

Changes in the Allan Royal Mail Steamship Line.

Announcement was made in Canadian Railway and Marine World for October of the retirement of Sir H. Montagu Allan and B. J. Allan from the Allan Line board, which with the previously announced retirement of J. Smith Park, left three vacancies. The Montreal Star's London correspondent recently stated that the vacancies had been filled by the election of F. W. Taylor, Thos. Reynolds and Sir Thos. Skinner, and continued to the effect that Sir Thos. Skinner's acceptance, he being a director of the C.P.R., will have a tendency to confirm the repeated reports of closer future relations between the Allan Line and the C.P.R.

We have been advised that W. J. Dott, Manager at Liverpool; J. A. Martin, Manager at Glasgow; and W. McK. Roden, General Passenger Manager at London, have been elected directors of Allan Bros. & Co. of the United Kingdom, agents of the Allan Line for Europe.

In connection with the various rumors as to the acquirement of control of the Allan Line by the C.P.R., which have had currency during the past two or three years, and which have been revived with continued persistency in the last few weeks, Sir Thos. Shaughnessy, President, C.P.R., is reported to have stated that the arrangements between the C.P.R. and the Allan Line are the same now as they have been for years past, and that no change is contemplated in them.

B. J. Allan, who has acted for the Allan Line in Boston, Mass., for several years, has also stated that there has been no amalgamation between the Allan Line and the C.P.R., and that the rumors all proceed from a mutually satisfactory arrangement for the handling of business at St. John, N.B., during the winter.

The reports as to the amalgamation with, or acquirement by, the C.P.R., chiefly emanate from Glasgow, where it is claimed that developments of an extraordinary nature, regarding the future control of the company, will be announced early in 1913.

These, it is stated, will include the retirement of Hugh A. Allan and Andrew A. Allan, and in fact, the severance of all the Allan associations with the company's management.

A Montreal press report quotes a cablegram received there as saying:—"The joint stock companies registration in Edinburgh of the Allan Line Steamship Co. shows that the Royal Trust Co. of Montreal holds 57,637 shares, the total being 60,639 shares. Sir Montagu Allan is registered as holding 500 shares. Allan Bros. and Co. is the title of a separate company."

The Loss of the s.s. Eric.

The following judgment, concurred in by Capt. N. Hall and J. W. Harrison, was delivered by Commander H. St. G. Lindsay, Dominion Wreck Commissioner, recently, in the matter of the stranding and subsequent loss of the British s.s. Eric, on Sable island, N.S., Aug. 14:—

After reviewing the evidence, which, on account of all log books, documents, etc., being lost, was given entirely from memory, the court finds that the vessel was well found and equipped and apparently navigated in a proper and seamanlike manner, up to the morning of Aug. 14, and that the cause which led to the stranding, was owing to the master, W. G. Corner, being over confident as to his position, and in approaching, and trying to make, such a well known danger as Sable island, and presuming his position on Aug. 13 to be correct he showed very poor judgment on finding the water shoaling so perceptibly, in not taking another cast of the lead or hauling off to the eastward, or stopping his vessel until the weather cleared or he was able to find out his position, and therefore the court suspends his certificate for three months from Aug. 26.

The court also criticized the want of co-operation by the officers in the working up of the vessel's position, and compass errors, as a check on the master's work.

During August, four employees were killed, and six were injured in the course of their work in connection with the navigation of Canadian waters. Two of the fatalities were due to drowning, and one each to falling from the mast head, and to scalding, while of the other accidents, two were caused by falls, and one each by scalding, falling material, machinery, and by being crushed.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during September, 1912:

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened an office at Morrin, Alta.

The Western Union Telegraph Co. will shortly move its Victoria, B.C., offices to the Central block, where a considerable expenditure will be made in bringing the office thoroughly up to date.

G. A. C. Phillips, heretofore assistant local manager C.P.R. Telegraphs, Toronto, has been appointed local manager at Calgary, Alta., and has been succeeded at Toronto by G. Paton, heretofore accountant there.

W. W. Ryder, heretofore General Superintendent of Telegraphs, New York Central Lines, Chicago, Ill., has resigned on his appointment as Manager of the Western Union Telegraph Co.'s railway department, with office at New York.

G. A. C. Phillips, heretofore assistant local manager, C.P.R. Telegraphs, Toronto, has been appointed local manager at Calgary, Alta. He entered the service 20 years ago, and has been continuously connected with the Toronto office.

The Great North Western Telegraph Co. was charged at the Toronto police court, Oct. 10, with wilfully assisting in gaming, wagering and betting by the transmission of telegrams relating to betting on horse races. The case was sent for trial.

The Great North West Telegraph Co. has opened offices at Gorrie and Lions Head, Ont., and Ha Ha Bay Jct., Que., and has closed its offices at Clifton House, Niagara Falls; Crediton, Formosa and Wheatley, Ont.; Lotbiniere and Richmond, Que.

At the annual meeting of the Western Union Telegraph Co. in New York, Oct. 9, T. N. Vail, President, advocated the com-

bined use of the plants of the Western Union Telegraph Co., and the American Telephone and Telegraph Co., of which he is also President.

E. C. Keenan, heretofore Superintendent of Telegraphs, Lake Shore and Michigan Southern Ry., Cleveland, O., has been appointed General Superintendent of Telegraphs, New York Central Lines, west of Buffalo, N.Y., and will also represent the Western Union Telegraph Co., with office at Chicago, Ill.

The annual meeting of the Great North West Telegraph Co. was recently held at Toronto, when the financial statements for the past year were submitted and adopted by the shareholders. The meeting was subsequently adjourned to a date to be decided on later, when the officers for the current year will be elected.

The Great North West Telegraph Co., on account of the increase in traffic, has been compelled to lease additional space over its present office in Winnipeg, and Superintendent of Equipment Davies recently left Toronto for Winnipeg for the purpose of making the necessary changes in, and additions to, the electrical equipment there.

F. F. Riefel, heretofore Assistant Division Superintendent, Franklin division, Lake Shore and Michigan Southern Ry., has been appointed Superintendent of Telegraphs, vice E. C. Keenan, appointed General Superintendent of Telegraphs, New York Central Lines, west of Buffalo. He will also represent the Western Union Telegraph Co., with office at Cleveland, Ohio.

The C.P.R. has opened telegraph offices at Cadogan, Purple Springs, Alta.; Cedar, Clanwilliam, Glenogle, Tappen, B.C.; Marconi, Murdoch, Man.; Loon, Meadowside, Ont.; Baring, Belbeck, Bounty, Cabri, Conquest, Cutknife, Dafe, Horizon, Kennedy, Meeta, Mozart, Neville, Pennant, Piapot, Plunkett, Primate, Regina Beach, Stranraer, Success, Vanguard, Viceroy, Waseca, Wymark, Sask.

A London press dispatch states that the Pacific Cable Board, operating the cable between Canada and Australia, is considering the question of installing a high power wireless telegraph system, instead of, as has been proposed, duplicating the existing cable. It is stated that expert opinion has decided that with such a wireless system supplementing the present cable, the best possible service would be provided. It is also announced that the Board is conducting negotiations with the U.S. companies with a view to a reduction of 3c. a word on press messages to and from Australia.

The city of Hamilton, Ont., has applied to the Board of Railway Commissioners for an order to compel telegraph, telephone and other companies using overhead wires to place their wires under ground in the central portion of that city. Plans for the carrying out of such work have been submitted by the city engineer, and it was claimed at the recent hearing at Toronto, that they were feasible and reasonable, and that there was no danger in placing high and low tension wires in the same conduits so long as they were separated by vitrified terra cotta. In opposition to this it was stated by Prof. Herdt, of the Electric Service Commission, Montreal, that the cost of installing services had not been reckoned with, and his experience in Montreal showed that this in addition to being a most difficult engineering problem, was one of enormous expense. The Great North Western Telegraph Co. contended that the burden was commercially impossible for that company, as its entire revenue from Hamilton was only \$18,486, and the operating expenses over \$15,000 a year.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

E. S. Jenison, formerly with the Henion and Hubbell Co., Chicago, Ill., has been appointed Manager of the pump department of CANADIAN FAIRBANKS-MORSE CO., Ltd., who are now the exclusive sales agents in Canada for the triplex and power pumps, as well as the other lines manufactured by The Goulds Mfg. Co., of Seneca Falls, N.Y.

S. F. BOWSER AND CO., oil tank and oil storage system manufacturers, Fort Wayne, Ind., and Toronto, have appointed E. H. Briggs as railway salesman for the southwest territory, including Texas, New Mexico, Kansas, Nebraska, Arkansas, Missouri, Louisiana, Wyoming and the Dakotas. E. F. G. Meisinger has been given the territory west of the Rocky mountains.

THE OHIO BRASS CO., Mansfield Ohio, has issued Tomlinson Car Coupler Equipment, a 60 page booklet, 11 by 8 ins., thoroughly describing and illustrating this equipment for electric railway service, including automatic radial car couplers, automatic air connecting car couplers, M.C.B. automatic car couplers, spring draw bar carriers, draft gears and accessories. Copies will be sent postpaid on request.

BESLY'S MODERN DISC GRINDING Practice, a book of 111 pages, with 103 illustrations, issued by Chas. H. Besly and Co., Chicago, Ill., has been prepared with a view to answering about every question that may arise in regard to the use of disc grinders. Its contents include the spiral disc grinder, the machine, application of the grinder, amount of stock to be removed, distribution of ground surface, thickness of adjacent stock for absorbing the heat from grinding and for resisting distortion, checking the work, rotary process of flat surface grinding, selecting circles, ring wheel grinders, grinders in the tool room, on the erecting floor and among the vise hands, in the wood pattern shop, automobile factory, gas engine shop and railway shop test department.

THE AMERICAN LOCOMOTIVE CO., which owns the Montreal Locomotive Works, and includes the operation of them in the accounts with its other plants, made a net profit for the year ended June 30, of \$1,867,554.21, which, after paying 7% dividend on common stock, \$1,750,000, left a surplus of \$117,554.21, a decrease of \$1,608,007.55 from 1910-11. The volume of sales for the first half of the fiscal year was at a low ebb, and was equivalent to only 33% of the amount of business necessary to keep the plants running at full capacity. Since Jan. 1, 1912, there has been a much stronger demand for new locomotives with the result that the amount of unfilled orders on the books on July 1 was \$14,450,000, compared with \$6,015,000 at the beginning of the year. Apart from the loss in profits due to the natural decrease in business, the company suffered serious financial loss as a result of a strike of its boilermakers which affected practically all of its plants and lasted from Oct., 1911, to Feb., 1912. During this period production was badly retarded, and at times the plants were practically at a standstill.

Freight Car Balance and Performance.—The American Railway Association's statistical report of freight car balance and performance, covering six Canadian lines reporting, for June, shows, 116,142 revenue freight cars owned, average number of system cars on line, 74,476; average foreign cars on line, 59,529; total cars on line,

134,005; excess, 17,863; private cars on line, 3,335; percentage of cars in shops, 5.37; freight locomotives owned, 2,025; average cars on line per freight locomotive, 68; total freight car mileage, 103,347,360; average miles per car per day, 25.1; per cent. loaded mileage, 75.3; ton miles of freight, 1,456,578,540; average ton miles, per car

mile, 15.2; per loaded car mile, 21.8; per car per day, 354; gross freight earnings, \$10,381,113; average daily earnings, per car owned, \$2.56; per railway car on line, \$2.62; all cars on line, \$2.49. The report to Sept. 26, showed surpluses of 2,064 box, 51 flat, and 87 other cars, a total of 2,202 cars and shortages of 943 box, 471 flat, and 460 others.

DEARBORN FEED WATER TREATMENT

Right in Principle—Economical in Application

The foaming, corrosive, and scale forming elements contained in the boiler water supplies along a line of railroad are first determined by accurate scientific analysis. The treatment is then made up to completely counteract these elements, and can be relied upon to give continuous freedom from these troubles.

Its value shows up strongly in a great many vital phases of railway operation—decreased coal consumption—increased life of fire boxes and boiler tubes—reduction in repairs—greater locomotive mileage and hauling capacity—and better traffic conditions generally. The savings under any one of these items will more than pay for the treatment. The cost of application is practically nothing. Gallon samples required for analysis.

Close Corner Piston Air Drills Are the Original No.'s 8 and 9 Close Quarter Machines

Equipped with Roller Bearings
which reduce friction to a minimum.
Guaranteed 30 per cent. more
efficient than any other make.
Sent on trial at our expense.

Made especially for use in close
quarters where the ordinary air
drill cannot be operated.

BUILT IN TWO SIZES:

No. 8 for drilling up to 1 1/4 in. in diam.,
Reaming and Tapping up to 1 in.

No. 9 for drilling up to 3 in. in diam.,
Reaming and Tapping up to 2 in.

EDISON BSCO

PRIMARY BATTERY

The Standard Closed Circuit Cell

The invention of the electric semaphore marked an epoch in railway signalling; practically the beginning of the automatic system. The Edison Primary Battery played no small part in making possible the rapid development of the art, which followed the invention.

To make the new signal a commercial success, required a battery of the closed circuit type, capable of delivering a current of reasonably high amperage; it should not be particularly susceptible to cold, thus eliminating the necessity for expensive housing required with gravity cells; high ampere hour capacity was essential, in order to avoid frequent renewal and to make the proposition attractive, the first cost must be reasonable.

It is apparent that Edison Primary Battery was ideally suited for just such a proposition and accordingly it ably assisted in making the automatic semaphore practicable. How much more difficult the development would have been had not a reliable primary battery been available, can only be conjectured.

The efficiency of the Edison Cell of those days won for it the confidence of all signal men, but dependable as it was it could not compare with the EDISON BSCO cell of today.

The most noticeable improvement in the new cell is the construction of the element, and while ease of renewal is probably the most important feature, resulting from the change, the rigid mounting of the parts and the fixed relation between plates, have had a marked effect, increasing the available E. M. F., reducing internal resistance, insuring uniform results from all elements, and the peculiar construction eliminating all danger of loose zinc connections or poor contact between oxide plate and frame.

Improved manufacturing methods have had an important bearing in perfecting details, and, therefore, had much to do with placing the Edison BSCO cell in its present pre-eminent position.

In short, the success with which the EDISON BSCO Battery has met is due largely to the constant effort to produce a closed circuit cell that can be absolutely depended on, coupled with the manner in which the railroad companies have shown their appreciation of this work.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference

work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost \$1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employees that are desirous of advancing to higher positions. Write for catalog now.

"STANDARD" QUALITY

You Pay For Good Wire

whether you use it or not. If you buy a cheap wire, "made to meet a price," you may pay several times the cost of good wire in replacement of your wiring or of the building in which it is installed.

"Sterling" Rubber Insulated Wire

is made to maintain a standard, not to meet a price. The price, however, is as low as that for which a product of equal quality can be sold.

Our new booklet, "*Sterling*," gives valuable information about rubber covered wire. Sent on request.

Standard Underground Cable Co.

"STANDARD" ECONOMY

Actual photograph taken on the Chicago, Rock Island & Pacific R. R. with no other light but the Pyle-National Electric Headlight. The station seen is a half mile from the engine.

THIS is the kind of light produced by 19,000 Pyle-National Electric Headlights. Over 2,000 of these lights are in service in Canada. Our new "E" Type Turbo Generating Set will positively show the lowest evaporation of any turbine that has ever been developed for this service per E.H.P. Lowest operative maintenance cost. Every equipment guaranteed.

Pyle-National Electric Headlight Co.
CHICAGO

Synopsis of Dominion Land Regulations

Any person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-agency for the district. Entry by proxy may be made at any agency, on certain conditions by father, mother, son, daughter, brother or sister of intending homesteader.

Duties.—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price, \$3.00 per acre.

Duties.—Must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may enter for a purchased homestead in certain districts. Price, \$3.00 per acre. **Duties.**—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.

W. W. CORY,

Deputy of the Minister of the Interior.

Offices throughout the Civilized World.
Executive Offices:

NOS. 340 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Correspondence Invited.

PROFESSIONAL CARDS

CANADIAN RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and shipbuilders, contractors and promoters of railway enterprise. CANADIAN RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

WAR DEPARTMENT

OFFICE OF THE QUARTERMASTER-GENERAL, WASHINGTON

Goldschmidt Thermit Co.,

90 West Street,

New York, N. Y.

(381551)

Gentlemen: 1. Replying to your letter of August 26th, 1912, you are informed that the welded stern post of the steamer "Gen. Nathaniel Greene," which you repaired for this Department at New London, Conn., in 1907, is still in service on that vessel and giving satisfactory results.

2. It is general policy of this Department to not permit the publishing of any official reports upon commercial products or processes, but in this particular case there would appear to be no objection to your use of the foregoing statement of fact regarding the continued use during the past five years of the stern frame welded by you. By direction.

Respectfully,

(Signed) WILLIAM F. MORTON,

Major, Quartermaster Corps, U.S. Army.

We feel confident that the above letter, the original of which we can show, is enough evidence to prove the permanency of a "Thermit Weld."

Our welding process has received the sanction of the British Corporation for the Survey and Registry of Shipping, Glasgow.

Our pamphlet No. 25N and "Reactions" will interest you. Shall we send them?

NEW 8-FEED DETROIT LUBRICATORS

CANADIAN DETROIT LUBRICATOR COMPANY, LTD.
WINDSOR, ONT.

The new 8-feed Detroit Locomotive Lubricator is used on superheater Mallet compound locomotives. The six outside feeds lead to the high pressure steam chests, the high pressure cylinders and the low pressure steam chests.

The two middle feeds can be used for two air pumps, or for one pump and an intercepting valve or for one pump and a mechanical stoker.

A half turn of the oil control valve permits of all the feeds being started or stopped instantly without disturbing the adjustment of the feed regulating valves. A quarter turn cuts off all but the two middle feeds.

The new Detroit Locomotive Lubricators give greater oil mileage, easier control and better lubrication than any other lubricators on the market. Our circular tells why. Sales Agents, Taylor & Arnold, Limited, Montreal.

On construction work you should use a machine that will be busy all the time, because an idle machine means a loss in money.

THE BROWNHOIST LOCOMOTIVE CRANE

Can be kept busy all the time from the beginning to the end on any construction work—because it can be used for excavating with grab or drag-line bucket ; handling sand, gravel, stone, etc., with grab bucket or skips ; drive piling and sheeting with either steam pile-driver or drop-hammer ; place the concrete in elevated forms or in trenches ; pull piling and sheeting ; place the backfill ; switch the cars ; and all the miscellaneous hoisting work.

These Cranes are self-propelled ; made in various capacities ; eight and four-wheel ; and with either steam, electric, or gas engine drive.

Our Catalogs I and K show how and where the Crane is used. Write for these Catalogs.

Street Railway Motors

IN SNOWSTORMS AND BLIZZARDS

THE WINONA INTERURBAN RAILWAY

Allis-Chalmers Co.,
West Ams, Milwaukee, Wis.

Warsaw, Indiana, Feb. 25, 1912.

Dear Sir:—No doubt you will be pleased to learn of the successful operation of the R-75 Motors during the recent snowstorm and blizzard which we have had in this part of the country.

We have encountered snow drifts from two to six feet deep on our system. The cars equipped with the R-75 Motors going through drifts for two days without any attention whatever and giving us no trouble whatever, not losing a single armature or field coil during this severe service. When we were able to get the cars in for inspection we found the motors absolutely dry inside and the oil boxes with no moisture whatever. However, we did have one motor with the motor cover lost off, and when this motor was discovered we found the shell one-third full of water. This was taken out of the motor and same put back into service.

The service which the R-75 motors have given us during the past week satisfies me that these motors will work under any existing conditions.

Yours truly,
(Sgd.) Chas. Sigler.

The First Principle of Signaling

is to provide means to positively insure that the signal will be seen at all times, under all circumstances and all weather conditions.

It is not sufficient that the signal *can* be seen or *ought* to be seen. To secure positive results it should be so displayed that it *must* be seen.

In view of the remarkable improvements which have been made in signaling methods during the last few years, it is rather surprising that so little has been accomplished in the application of this fundamental principle in a practical way.

While the Simmen System of Railway Signaling is designed, in its complete application, to provide full protection for trains, it is certainly not the least valuable characteristic of this system that its basic feature viz: the Simmen Cab Signal, is so designed that it may be applied at remarkably low cost as an auxiliary to semaphore signaling, whether the latter be automatically or manually controlled.

With the Simmen Cab Signal, the engineer has immediately in front of his eyes, at all times, right within his cab, a green light as long as he has a clear track. If a semaphore is set against him, the light in his cab changes to a red light in ample time to give him full warning of the semaphore signal set against his passage.

There is absolutely no possibility of the cab signal escaping the engineer's attention in any kind of weather or under any conditions of operation.

The positive and unfailing operation of the Simmen Cab Signal is not theoretical; it has been fully and clearly demonstrated by over three years of steady service.

Under the Simmen System, the first cost of adding this extremely valuable feature as an auxiliary to existing signal protection is very low and the maintenance cost is negligible.

This company is prepared to demonstrate to any railway the value and economy of this single feature of the Simmen System, or of the Simmen System as a whole, designed for full protection of train movements.

Descriptive literature will gladly be furnished upon request.

It's tests like this that clinch the supremacy of **Titanium Rails**

Three mills competed. The superior wearing qualities of the Titanium open-hearth product, as demonstrated in this test, confirms our former published statement that no railroad operator or stockholder can afford to ignore Titanium Rails. Complete details of tests on other roads will be sent on application.

**In 19 months' test on Boston & Maine,
Titanium open-hearth rails proved
55 to 186 per cent. superior to plain
open-hearth and plain Bessemer rails**

In the face of facts like these, the extra cost of Titanium rails—only about \$2 per gross ton—is remarkably low. Booklet No. 30 explains in detail the action of Titanium. When you write ask for rail diagrams and full information regarding the Boston & Maine test.

New 4 Ampere and 2 Ampere Luminous Arc Headlight

In hundreds of cities, thousands of G-E Luminous Arc lamps are giving the utmost satisfaction. The same principles in the manufacture of these highly efficient street lamps are embodied in the Luminous Arc Headlight.

4 Ampere—All possible requirements and conditions of service can be met.

A constant steady light is maintained throwing a wide angle beam about 2,000 ft., without interfering with traffic paralleling the track.

Intown dimming is accomplished by reversing polarity or using incandescent lamps—a screen is unnecessary.

The new draught device prevents fume deposit on lens of mechanism.

Mechanism is carefully and substantially built; working parts are readily accessible for inspection.

Side handles on headlight make it convenient to carry.

Upper electrode is practically non-consuming, having a life of over 2,000 hours; lower electrode burns with a brilliant white light from 60-80 hours.

2 Ampere—Built on the same principles as the 4 amp. and designed primarily for suburban service.

Throws a concentrated beam of light from 600-800 ft.

An iron wall separates mechanism from arc, allowing free ventilation and a steady arc.

Mechanism is easily accessible and can be locked to prevent tapering.

The draught device keeps lens and mechanism free from fume deposit.

Can be furnished for portable or for permanent mounting.

The Best Train Lighting System is Electrical The Best Storage Battery Is The Edison

The construction of the Edison Cell (consisting of element, electrolyte and container) constitutes a wholly new departure in storage battery practice, which immensely increases the range of usefulness in railway work.

In Railway Work Reliability is Essential

Where the strait storage, the axle generator, or the head-end generator system is used, reliability of the storage battery is the vital point. Why fuss with lighting equipment requiring constant expert attention to keep going and heavy to handle and to haul, when the storage battery of to-day is the care-free, long lived Edison Battery?

The Edison Battery saves one ton in weight per car on 32 volt lighting equipment. Its trays weigh only 100 lbs. and can be handled easily by one man. Its care and operation is as simple as A-B-C. It can be charged when convenient, and will stand discharged indefinitely without injury. It is totally free from "sulphation," or any sort of corrosion, making the storage battery the most dependable, instead of the most unreliable part of the train lighting system.

It will pay you to send for our newest bulletin No. 1018 "Edison Train Lighting Batteries."

ASBESTOS LUBRICANTS

LUBRICANTS THAT

KILL HEAT

PRESERVE THE METALS

PREVENT FRICTION

This Mark

Our Guarantee

Asbestos Lubricants introduce an entirely new system by which a lubricant will retain its original efficiency, no matter what the conditions of wear or climate. The idea in this is to neutralize the distinctive effect of heat by producing a lubricant which in itself possesses the quality of resisting heat. Asbestos, which is the greatest heat-resisting substance, is amalgamated with High Grade Oils. This absolutely eliminates over-heated bearings and allows the machinery to run without the slightest friction, thus prolonging its life.

Journolene

For the journals of Railroad Cars, Street Cars, Pulp & Paper Mills, Foundries, Steamships, and all machinery of heavy duty.

Asbestolene

Destroys the rattle of manufacturing machinery, replacing it by a musical hum that tells of smooth running with maximum efficiency. Specially prepared for gears.

Spedolene

This is specially prepared for Motor Cars and Trucks. It will last longer than any other lubricant, will positively deaden noise, and will not run out at the gear cases. After once used you will always specify it.

Axolene

This is the highest grade of axle grease; it forms a perfectly smooth durable coating on the axle. After this surface is once formed you need use less than 1-2 as much Axolene as of any other axle grease. "Axolene will never cake."

Write at once for our booklet on "SCIENTIFIC LUBRICATION." You will be interested in striving to cut down your lubrication expenses.

Cupolene

For all kinds of compression cups and bearings. Cupolene is the ideal lubricant for armatures in Street Railway Cars. The wearing qualities are wonderful.

"Why Scherzer ROLLING Lift Bridges

are the least expensive and most efficient for all channels—wide or narrow."

Scherzer ROLLING Lift Bridges expedite land and water traffic. They use the only correct principle for transportation on land—the universally-used ROLLING principle. They roll a short distance on *part* of a wheel, as all conveyances roll longer distances on *whole* wheels.

Deep water brings raw material inland cheaply—develops industry, enriches communities, increases rail traffic and profits.

Diagram of Scherzer ROLLING Lift Bridge

The Universal ROLLING Principle

Scherzer ROLLING Lift Bridges roll back while going up, allowing water traffic to pass. They roll forward and down allowing land traffic to pass. They can be operated in 30 seconds because they are so simple. They cost less to build and operate than any other movable bridges because they are so simple. There's no wear because there's no friction.

As the bridges require only part of a wheel, they avoid the only disadvantages of any rolling stock, which are the friction causing axles and journals or trunnions.

Scherzer ROLLING Lift Bridges let largest vessels pass in shortest time at least expense. They form a barrier against accidents, leave channels clear and use no space at sides. Scherzer ROLLING Lift Bridges need not be wastefully replaced, but can be added to. One man operates one or many. Send data for sketches, estimates and full information.

More than 190 Scherzer ROLLING Lift Bridges now in use in the United States, Canada, Mexico, South America, Europe, Asia and Africa. Send for list, and comparative report showing advantages over swing or high bridges, other movable bridges or tunnels.

Pintsch Mantle Light

No other system of car lighting gives clean, safe and efficient light without intricate mechanism, subject to defects and failures. Pintsch Mantle Light is the only absolutely dependable method of lighting railway cars.

The Safety Car Heating and Lighting Company

2 RECTOR STREET, NEW YORK

718 TRANSPORTATION BUILDING, MONTREAL

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	- - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	- . -	9.30 p.m.	Arrive Montreal, 7.00 a.m.
Arrive North Toronto	- - -	9.40 p.m.	Daily
Leave North Toronto	- - -	10.00 p.m.	Will Stop at Westmount

Electric Lighted Compartment Cars and Standard Sleepers for both points.

- ☞ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.
- ☞ The roadbed has been improved till it is unexcelled in Canada.
- ☞ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, ensure efficient service.

VANADIUM

THE STEEL OF ULTIMATE QUALITY

ELASTICITY

STRENGTH

TOUGHNESS

ENDURANCE

A set of Chrome-Vanadium steel tires 51-inch diameter in shifting engine service fourteen months, double turn, did 28,184 miles with maximum channel of 8-32 inch. Exceptionally uniform wear and freedom from flange cutting. Machined and put back into service they made in 13½ months 31,936 miles with maximum channel of 9-32 inch. Now in the third term of service and will be good for a fourth term, which is very exceptional for this yard.

Vanadium Steels are stronger; have greater endurance under repeated stresses and shocks; are more resilient and tougher; respond better to heat treatment and wear longer than steels without vanadium.

Our Ferro Vanadium is the Standard for Making Vanadium Steel

SCOTCH BOILER GIVES RAPID CIRCULATION

The water from the small drum is guided around the shell to the bottom from which it rises between the furnaces and among the tubes.

The chief feature is rapid circulation; others are:

Reduced radiation loss by surrounding the hot water with cooler entering water, and the boiler is internally fired.

No flat top combustion chamber, no crown bars, no girder stays.

No. 1 Improved Little Giant Drill

BALL BEARINGS

The correct bearings for portable air drills, regardless of inevitable deflection of crank shaft under strain, each ball, with point contact only, performs its work with minimum friction.

The Little Giant Drill in its present form is absolutely the last word in portable air drills. The advantages and improvements added to the basic merits of the machine itself, result in a portable air engine that for long life, for upkeep and air consumption economy, and above all things, for POWER, has no equal on the market to-day.

Canadian Northern Railway Locomotive and Car Shops at Winnipeg.

By Frederick H. Moody, B.A. Sc.

The inception and marvellous development of the Canadian Northern Ry. system within the last fifteen years is a matter familiar to all, and yet none can stop to ponder over the fact without marvelling at the stupendous character of the undertaking, and the success which has attended the development from the very beginning, due to the tireless energy of the two promoters and the able body of men they have been able to gather about them.

To meet this rapid growth the rolling

ping of the rolling stock, this being kept in repair and in service in the best manner possible under the circumstances, at the terminal points and in small and inadequate shops, moderately equipped, located close to the present Winnipeg Fort Garry station.

Realizing that proper provision must be made for this very important part of a railway's many ramifications, large central shops were planned in 1908, taking concrete form in the present large and well-designed shops at Fort Rouge, a southern

the time of erection, being shown, for large extensions—in some cases doubling the capacity—have been and are being made to several of the buildings. A study of the plan will show the manner in which this policy was carried out; each instance will be noted in due course as the description of the individual buildings progresses. Under the guidance of S. J. Hungerford, Superintendent of Rolling Stock, and A. H. Eager, Superintendent of Shops, with the staff of foremen, the original plans

Fig. 1. Section 1.—Layout of C.N.R. Fort Rouge Shops—North End.

Fig. 1. Section 2.—Layout of C.N.R. Fort Rouge Shops—South End.

stock has grown apace—in fact, at a much more rapid rate, as the volume of traffic developed has increased much more rapidly than the mileage, great as that has been—so that to-day, the number of locomotives and cars to be cared for has reached a very large number, especially when the newness of the road is considered.

For the first decade so much attention was concentrated on the extension of the railway mileage that but little thought was given to the proper handling and shop-

suburb of Winnipeg on the C.N.R. main line, which were completed in 1909. Here all the rolling stock of the lines west of Port Arthur has been shopped since that date. The layout of these shops is shown in the accompanying plan of the shop yard arrangement, fig. 1.

With characteristic foresight ample provision was made for the future extension of the various units comprising the shops; and the wisdom of that provision is, even at the present time, just three years from

are being pushed forward and improved upon, so that the shops are now the equal of any of similar size in this country, and probably elsewhere.

The shops cover a considerable tract of ground on the main line, slightly over a mile southwest of Fort Garry station. On the north, the grounds extend from near the point where the line crosses Pembina street, to Kylemore avenue on the south, a distance of more than three-quarters of a mile, the buildings being for the most

Fig. 2.—Interior Layout and Machine Tool Distribution in Machine and Erecting Shop.

part near the north end and the repair yard and rip tracks at the south end. At the widest point, across the roundhouse and machine shop, there is a width of about 800 ft., narrowing off towards each end. The office of the Superintendent of Rolling Stock is located at the foot of Scotland avenue, convenient to the buildings of both the locomotive and car departments, by which means both he and the Superintendent of Shops are constantly in touch with the work.

THE LOCOMOTIVE DEPARTMENT, D. Galloway, General Foreman, comprises all the shops handling and repairing such motive power as has been turned over by the operating department for shopping. The main buildings in the group consist of the machine and erecting shop, blacksmith shop and foundry. All the buildings have close communication with each other, the machine shop and erecting shop under one roof, the machine and blacksmith shops connected, and the foundry close in the rear of the latter, making connection in the rigorous winters to which this part of the country is subject, particularly easy.

MACHINE AND ERECTING SHOP.—

These allied departments are housed in a large building of conventional design, 572 ft. by 163 ft. 4 ins., a plan of which is shown in fig. 2, and interior views from the west end in figs. 3 and 4. The shop is divided lengthwise into three bays. The south one, fig. 4, is the erecting floor, while the other two are the machine tool bays, the central one, fig. 3, for the larger machines and general departments, and the north bay for the department groups of smaller machine tools. The offices of the General Foreman, and of A. Hopkirk, Shop Engineer, and A. Hough, Foreman Machine Shop, are located a few feet above the ground, as shown to the left in fig. 5, about the centre of the light machine tool bay, in a position commanding a view of the whole shop.

The building is a brick structure, built on a concrete step footing, with a maximum width of 9½ ft. on the light tool bay side, and 8 ft. on the erecting shop side, these foundations in both cases being sunk to a depth of 6½ ft. The central bay is 51 ft. 4 ins. wide, and the outside bays each 55 ft. 4 ins., making a symmetrical construction. The roof, with a central height of about 40 ft., is carried

ing. The original plans called for hot air heating, with fans located at three points along the north wall in lean-to buildings. This plan was changed to the use of steam heat. Steam at 125 lbs. pressure is brought from the power house on an elevated trestle, entering the erecting shops near the roof level at the southwest corner of the building. Here is located a large reducing valve to provide the low pressure of the heating system. Along the north wall and the two end walls, there are banked 34 coils of 2 in. pipe, in separate units between each of the windows and doors. On the south wall, where the large locomotive entry doors are located, special provision was made by increasing the banking of pipes around the buttresses to 52 coils of the same size, as shown along the right wall in fig. 4. This arrangement, with 3 or 4 lbs. of steam, has been found ample to keep the shops quite comfortable in winter, the extra coils on the south side quickly bringing the shop back to normal when locally chilled by the spotting of a locomotive on a pit.

A 6 in. main, carried alongside the steam main on the trestle, supplies air for the shop, a pipe with double connection at the

by roof girders, spaced 22 ft. centres, down the length of the building, of a construction to be seen in figs. 3 and 4, the ends resting on abutments of the brick walls, and on steel columns along the lines of the bay divisions, these columns being built up of a plate 16 x 9-16 ins., to which are rivetted four 6 x 3½ x 9-16 in. angles. The clear height to the bottom chord of the roof trusses is 28 ft. over the whole shop. The steel columns rest on step concrete footings, 6½ ft. deep, the lower face being 8¾ ft. square. Bedded in the bottom step of the footing is a double layer, five in each, of 8 ft. lengths of old rail section, to reinforce the footings. This solid construction of foot bearings was made necessary by the nature of the ground on which the shops are built, the land being largely of a swampy nature prior to its use as a site for the shops. The surface soil is mucky, with a base of thick clay, which forms a good foundation if a wide enough bearing be obtained. Hence the large area of all the foundations. The floor is surfaced with 3 in. planks, secured to 4 x 6 in. sleepers at 4 ft. centres, bedded in a 12 in. layer of gravel.

Special provision has been made for heat-

lower end being attached to each column, providing ample hose connections for all purposes. Electric power is supplied from the power house on poles above the steam and air trestle, in both direct and alternating current, the former for the individual drive and the latter for the group constant speed drive. The groups have induction motors, and the larger individual drive machines have direct current motors supplying a variable speed control in the motor itself.

The shop has large windows on all sides, which, with the 12 x 70 ft. skylights in each 22 ft. section, produces a well lighted interior. All windows are cleaned at frequent intervals, so that the light inside is but slightly less than that out of doors. Artificial illumination is obtained from Cooper-Hewitt mercury arc lights, suspended from the bottom chords of the roof trusses. Down the central bay, these are located alternately one and two per truss, with one suspended centrally from each truss in the side bays. Mercury arcs, while not providing a natural light, give a bright, penetrating illumination that is restful to the eyes, and with the close spacing provided, the shop is well lighted for all purposes.

The erecting shop contains 26 pits, approached from the south through large swing doors from an 80 ft. transfer table,

motive wheeling crane, capable of lifting the heaviest locomotive on the system. The balance of this erecting shop bay is equipped with three $1\frac{1}{2}$ ton travelling hand cranes at a rail level of 20½ ft., carried on a built up girder of 30 x ¾ in. plate and four 6 x 3½ x ¾ in. angles. Two of these cranes are located west, and the other east, of the wheeling crane which obstructs the passage of the hand cranes either side of that point. In addition, at each column, other than the ones on each side of the wheeling crane, there are 13 ft. jib cranes, constructed of 8 in. channels, as will be noticed on the left in fig. 4. The majority of these cranes have but recently been installed, the original shop construction only providing for one jib at every alternate post, the one crane serving two pits. Consequent delays are now overcome.

A 4 ft. suction fan is located up in a skylight over the row of columns, driven by a 15 h.p. induction motor, and connecting to a 20 in. suction pipe running the length of the shop over the columns; 14 in. pipes branch vertically downward over each pit track, the lower end carrying a telescopic smoke jack, which can be pulled down over the locomotive smoke stack for the firing up test. These jacks are counter weighted so as to slide up out of the way when not required. For the firing up test

the wheeling crane, where after loosening the gear and pedestal caps, the locomotive is lifted bodily. The forward end is lifted by a looped steel hawser suspended from the front hoist placed under the smokebox, and the rear end is raised by a cross bar suspended from links from the cross arm of the rear hoist placed under the rear end of the frame. The cross bar is kept near the door between pits 17 and 18, on strips of bar iron secured to the floor. Rollers are placed under the cross bar, and it is rolled across the pit tracks on the bar iron rails, the ends being there slipped into the slits in the suspended link ends. On the locomotive being raised, the drivers and truck left resting on the rail are rolled across into the centre bay, carrying their boxes. A small 4 wheel truck is run in from the rear and placed under the forward end of the frame, and a pair of mounted wheels placed under blocks of wood bearing up under the rear pedestal cap, placed back in position for this purpose. On these supporting wheels, the locomotive is lowered, run out on the transfer table, and spotted on the pit provided.

Tenders are handled on pits 20 to 26, and also on the extended ends of the through tracks 21 and 22. On these several tracks the tenders are placed by the transfer table in the same manner. The lighter

Fig. 3.—Central Bay of Machine Shop, Looking East.

Fig. 4.—Erecting Shop Bay, Looking East.

electrically operated. This transfer table has a windlass with a long cable, which when passed over a sheaf in the forward end of the pit, spots the locomotive where desired. The same attachment is used for drawing the locomotive out of the shop. This reduces to a minimum the period of time necessary to keep the doors open, a most important consideration in severe weather. Locomotives to be shopped enter from the north end of the shop grounds, running on the transfer table in its easterly position over the track passing along the rear of the roundhouse. This track is a through running one, the full length of the grounds, making approach from either end equally feasible. On the south side of the transfer table, as shown in fig. 1, there are several blind storage tracks for spotting locomotives before and after shopping when conditions are such that removal is inconvenient.

The pits, 37 ft. long, are constructed of concrete, and are located slightly nearer the central bay than the south wall, leaving a wide passageway back of the locomotives along that wall. The pit bottoms slope to the south, cast iron drain pipes leading from that end, connecting with a 10 in. tile pipe which empties into the city sewer passing across the grounds in line with Scotland avenue.

Pit 17 has a stationary 125 ton loco-

the locomotive is pinch barred forward until the smoke stack is directly under the smoke jack. The smoke drawn up by the exhaust fan is blown out through the roof, leaving the shop free from the objectionable smoke frequently found in shops where such a provision has not been made.

All but pits 20 to 26 are used for locomotive erection. The erection work is divided up into three gangs, and for each of the gangs, at a central point on one of the columns, there is mounted a steam driven water pump, consisting of a steam end of a 9½ in. air pump, to the lower end of which, in place of the air end, there is attached a 4 in. water pump with water connections therefrom. Each pit in the gang is thereby placed within convenient range of a water connection for giving the boiler a hydrostatic pressure test.

Between each pit there is a work bench, equipped with two vises, and at the north end of the bench, a double sided cast iron pipe rack for carrying the boiler fittings while dismantling. The rack is of ample size to accommodate all the fittings, leaving the floor around the pits entirely unhampered, and clear for the passage of the workmen from point to point around the locomotive.

The practice of this place, when a locomotive is shopped for heavy repairs, is to first spot the locomotive on pit 17 under

repairs are handled on the pits adjoining the locomotive pits, and the heavier ones on the pits at the east end and on the north end of tracks 21 and 22, all these tracks adjoining the boiler and tank shop in the northeast corner of the building, the whole of the shop east of track 19 being occupied by the boiler and tank department. The east four sections of the central bay are the boiler erection floor, fig. 6, where the boilers are handled when requiring heavy repairs.

This department is well equipped for a shop of the size, and has even built boilers complete when required. Near the corner, butting up against the end wall, there is an oil operated furnace about 12 ft. square, of a size designed to handle standard boiler plates. To the left front of the furnace there is a 12 ft. air operated flanging clamp, and between it and the wall is located a large flanging plate. An open forge fire for flange work adjoins the oil furnace along the wall. This battery of flanging equipment is provided with a 22 ft. jib crane swinging from the first wall buttress. The open space in front of this group is the lay off floor.

Alongside the centre bay columns, and to the south of the lay off floor, there is a double punch and shear with a 40 in. throat gap. Each one of the pair is equipped with a 10 ft. jib pivoted centrally on the top

of the frame, for the handling of the stock while being worked. Powerful 12 ft. plate rolls, capable of handling the heaviest boiler plate, face the lay out floor on the west. The vertical movement of the upper roll is power operated through a 15 h.p. d.c. motor, and the rolling, through a 25 h.p. d.c. motor. Alongside is a 24 in. gap punch driven by a 15 h.p. d.c. motor, the plate for which is handled by an 8 ft. jib. To the rear of this machine and the rolls, and adjoining the through tender tracks, there is a tender storage rack for the convenient location of such tender parts as coiled

is elevated on 18 in. pedestals, for the more convenient approach of mechanics repairing it or dismounting the parts.

To the north of the truck repair tracks, along the wall, is the lagging department, with flat topped sheet working table, and a lagging rack adjoining.

As before mentioned, the driving wheels from the wheeling pit are run across into the main bay. From here, they take either one of two courses, depending on whether retiring or only returning is necessary. If tiring is necessitated, the wheels are run straight across into the north bay, where

ings are trued down. This completed, the set of wheels is mounted in a row across the central bay against the through tender track of section 21, where planks are mounted on low trestles, as in fig. 8, under each journal, at a convenient height for the slipping on of the driving wheel brasses for fitting, these having at this stage arrived from the driving box department. On completion of the fitting, the boxes are mounted on the journals, and the finished wheels set to one side on the wheel floor for the rewheeling of the locomotive under the wheeling crane by a reversal of

Fig. 5.—Rod Department and Tool Distributing Room.

Fig. 6.—Boiler and Tank Shop Floor.

springs, truck columns, etc.

Along the north wall from the east are 8 ft. hand rolls, a plate trimmer with 10 in. circular shears and a horizontal flange punch driven by a 15 h.p. d.c. motor and equipped with a 15 ft. jib. Adjoining, in a 15 h.p. group drive, there is a 4 spindle plate drill, a 3½ ft. fan for the flange fire, a double 18 in. emery, and a double 2½ in. staybolt threader, completing the equipment of the boiler and tank departments, with the exception of a small forge fire between pits 23 and 24 on the other side of the shop.

the several pairs of wheels are mounted in a row on trestles over the through tracks, and the worn out tires removed by heating with a band pipe in the conventional manner. In this position, new tires are mounted by the same means, the wheels then retracing their steps to the central bay, from which point the steps are the same as for wheels that only require returning.

The wheels are picked up by the central crane and placed in a row, fig. 8, in the direction of the shop length, on the driving wheel floor, which adjoins the through

the former procedure.

Immediately to the west of the wheeling track there is a 300 ton hydraulic press for mounting or removing crank pins and axles when these operations are required. Behind this press is located a 90 in. boring mill, used for the most part on driving wheel work, boring and turning wheels and tires.

The driving box department is located on each side of the north door of the through driving wheel track. In this department, from west to east, there are an hydraulic press, 14 in. slotter with 6 ft. jib attached,

Fig. 7.—Locomotive and Tender Truck Department.

Fig. 8.—Driving Wheel Department.

The tool room for the local supply of air hammers, snaps, beading tools, and all tools required for boiler work, is located against the east wall, beside the big end door. The foreman's office adjoins.

Both locomotive and tender trucks are handled on the two longitudinal tracks, fig. 7, just north of the line of columns separating the main and north bays. These truck tracks extend from the through track of 21 to the through track of 17, the tender trucks being handled from track 21 to the cross tracks, and the locomotive trucks from track 17. A 25 ft. section of the truck tracks in section 19

track immediately to the east. The first step is the removal of the driving boxes, and after cleaning, their disposition in the driving box department for renewal and repair. The wheels are then in turn placed in the 90 in. driving wheel lathe for the turning, from which on completion they are removed and placed on end on supports for the pouring of new babbitt thrust bearings, which are renewed on both ends of a pair, the babbiting department for all work being located close at hand to the east of the driving wheel lathes. They are then mounted in the 60 in. driving wheel lathe, where the journals and thrust bear-

7 ft. radial drill, 32 in. boring mill, vertical miller with 10 ft. jib and a 36 in. planer with 8 ft. jib. The first two are on the end of the side rod group drive, the drill, boring mill and vertical miller on a 15 h.p. group drive, and the planer on an individual 10 h.p. drive.

The driving boxes as removed from the wheels on the driving wheel floor, are there cleaned and then trucked to the hydraulic press, where the brasses are forced out. New brasses are machined on the 14 in. slotter to fit and then removed to the press for forcing into place. These two machines, it will be noticed, are adja-

cent to each other. The assembled box is then moved over to the 7 ft. radial drill, for the drilling of oil and plug holes, the plugs being here fitted. Passing on to the vertical miller, the brass is bored out to fit the journal, the box being then ready for the 3 ft. planer, where the shoe and wedge fits are planed. The boxes thus make a belt line, entering the west end of the department and working around to the east, and then back to the driving wheel department for mounting.

The rod department, fig. 5, is located directly to the west of the driving wheel department, and contains an hydraulic press, 14 in. slotter, 20 in. boring mill, 18 in. shaper, 18 in. emery, 18 in. double rod shaper, and a 24, 20 and an 18 in. engine lathe in the distribution shown in figs. 2 and 5. The wall group is on a group drive. With a passage in the centre of the bay through the department, there are three vise benches, two north and one south of the passage. Between these benches, parallel to the passage so that the ends are near the benches, the rods are mounted on low trestles in a convenient position for fitting.

The rods as they come initially from the wheeling crane pit, which it will be noted, is conveniently located to the rod department by means of the cross track, where they are removed from the locomotive, have

walls, and in a central rack, providing for the accommodation of a wide range of stores. The tool distributing room will be described later, in connection with the tool room itself.

The air brake department, fig. 9, occupies the north wall in the next three sections. At the east end of the department are two racks for the accommodation of air brake fittings and inspirators, lubricators and parts, all of which are here repaired. In the main part of the air brake department (left foreground in fig. 9), there is a lye vat, steam heated, for the complete immersion of greasy compressors or their parts.

Parallel with the wall bench are four pedestals carrying a face plate, free to revolve in a vertical plane. To these face plates, compressors are secured, the revolving feature making all parts equally accessible to the mechanic. The bench to the south of these stands carries an air brake testing outfit, and at one end, a guage tester. The end of the air brake department adjoining the door is set apart for the repair of water pumps, for the most part gasoline, which are sent in from all parts of the system.

The piston and crosshead department, left background in fig. 9, occupies that portion of the shop in sections 6 to 9, alongside the row of columns. It contains a 30 in. en-

following machines:—4 spindle vertical stay-bolt drill, lathe centering machine, two 16 in. lathes, 18 in. lathe, 16 in. grinder and two 18 in. lathes, all on a 15 h.p. group drive. In the same department, along the line of columns, there is a double 18 in. shaper, 24 in. lathe and a radius link grinder attached to the centre bay side of a column. The centre of the department contains three vise benches, with a surface plate at the end of the centre one. Beyond the east bench is a rack for carrying such motion work parts as motion pins, valve glands, cups, springs, etc.

The manufacturing department occupies that portion of the north bay to the west of the through track in section 4, up to the last section which is partitioned off by a screen for the brass department. It is the practice in these shops to make standard and have them stocked for the general stores department, drawing from there for all parts of the system as well as for the local shop when required. It is in this department, called the manufacturing department, that all stock work is made up.

In the north west corner of the department, there are three vertical boring mills; the first, a 42 in., works steadily on piston and valve rings; the second, a 24 in., on motion work such as valve bushings, etc.; the third, a 24 in., on general stock work. Adjoining, there is a 4 spindle drill, used

Fig. 9.—Air Brake Department; Piston Department on Left.

Fig. 10.—Part of Motion Work Department.

the brasses removed under the hydraulic press, and then passed on for further fitting. The 20 in. boring mill is employed principally in boring brasses, and the 18 in. shaper in surfacing them. The 18 in. shaper along the row of columns is used in making shims, pads, etc. The other machine tool equipment is used for miscellaneous rod work.

The group of four benches in sections 12 and 13 of the north bay is for the millwrights and carpenters, where all the repairs to cabs, running boards and pilots are made.

Next adjoining this department, in section 11 and extending out into the centre bay, is the pipe fitters' department. This is equipped with two power pipe machines, two small open forges for copper pipe and other bent work, work benches fitted with ordinary and pipe vises, and a pipe rack at the west side, facing the central bay. For bending pipe, there is a lead lined block mounted on a pedestal in the floor.

About the centre of the north wall, in the background of fig. 5, are located the tool distributing and the petty stores rooms, over which are the offices of the shop officials as mentioned before, commanding a view of the whole shop. The petty stores room contains such minor stores as are in constant demand in the shop, and is well arranged with pockets on the rear and side

gine lathe with 10 h.p. drive, operating steadily on piston rods; a 4 ft. planer for crossheads, but also planing slippers, balance plates, steam chest covers and similar work; and a 30 in. boring mill for piston heads and cylinder covers. Adjoining a column, there is a bench for fitting, and attached to the column there is a jig for the mounting of pistons and piston rods, and holding them securely together while the piston rod nut is being tightened on. The crosshead work is handled across the through track in section 18, where there is a 27 in. and a 40 in. planer and two 24 in. shapers. It will be noted that the piston and crosshead department is almost centrally opposite the erecting shop, where the pistons and crossheads are removed from the locomotives, as against the removal of the rods under the wheeling crane.

All of sections 4 and 5, in the north bay, parts, that are used in quantities, in batches are occupied by the motion department. Nearly all the machinery here is small, for most of the motion work is of a light nature. All the motion work is made or repaired here with the exception of the eccentric sheaves and straps, which are produced in the 32 in. boring mill in the driving box department, and the surface grinding on the 36 in. surface grinder to the east of the piston and crosshead department. From east to west on the wall, as in fig. 10, are the

for the most part in drilling coupler pockets, arch bars and similar bulldozer forgings. Alongside this, there is a 3 spindle 2 in. bolt machine for rough stock bolts. These last two machines are close to the blacksmith shop door, from which the stock to be worked is received. These machines are on a 20 h.p. group drive. Along the brass room wall are two lathes, one 18 in., and the other 24 in., for general stock work.

To the north of the columns, there is a battery of four turret lathes for the stock production of bolts, studs, pins, hexagon head bolts, etc. This battery contains a 2 in., two 2½ in., and a 5¼ in. machines. The latter is for use on larger stock such as wrist pins, crank pins, knuckle pins and brake hanger pins. To the south of the row of columns and in the same department are a 32 in. drill, double 18 in. emery wheels and a 6 spindle nut tapper, these together with the turrets being on a 35 h.p. group drive.

All the machine tools in the central bay, fig. 3, other than the ones especially excepted in the foregoing, are in what is usually termed the general department, where all work that cannot be well classified into various departments is handled. From the driving wheel department adjoining the tender shop west ward, there are the following machines in groups and singly: Grindstone, three 16 in. vertical

drills, three 16 in. lathes, a 24 in. vertical drill, and three 28 in. vertical drills, all on a 20 h.p. group drive; medium sized horizontal boring mill with $3\frac{1}{4}$ h.p. drive; two 6 ft. radial drills; 48 in. horizontal rod milling machine for side and main rods, keyways, and sometimes shoes and wedges; two 18 in. lathes, 18 in. emery, 30 in. slotter with 13 h.p. motor; 48 in. planer with 15 h.p. motor (has shoe rack to the rear of slotter with classified shelves with numbers and classes of locomotives marked thereon); 24 in. lathe, 18 in. lathe, and 16 in. lathe; coach wheel lathe; and 48 in. lathe.

The tender wheels are handled at the west end of the centre bay, to the west of the coach wheel lathe, where the tires are turned. An oil furnace, built up of fire brick, has been constructed at the wall for the heating of the tires in batches of six. Leading down the shop, from this furnace are a couple of elevated tracks at a level of about 2 ft. above the ground and about 4 ft. apart. The axles rest on these rails, with the ends projecting beyond the rail on each side, the heated tire being slipped over the supported wheel centres from each end. The open space each side of the wheel tracks provides wheel storage. The wheels to be turned enter from the end door and are mounted in the coach wheel lathe, turned and then run further on into the shop, where the crane picks them up

constantly employed keeping the tools in shape. The shelves, being open on both sides, are equally accessible to the operator and tool room attendant. At the side of the tool grinder, there is a board of sample tools for the guidance of the operator.

Further along the west wall, there is a $3\frac{1}{2}$ in. turret lathe, followed by a no. 2 B. & S. tool grinder with a 12 in. swing. It is used for grinding taps, reamers, special tools, and air motor and hammer parts. Back of these two machines are two tool lathes, a 12 in. and a 14 in., employed principally on such work as special taps and reamers. All these machines are on a 15 h.p. group drive through jack shafts attached to the ceiling.

Next to the machine shop wall is a small power hack saw, with a patent drill grinder alongside. On the opposite side of the room is a general service double grinder and buffer. Back of this is located a 14 in. shaper, and alongside a large vertical miller for heavy tool work, and a second miller of smaller size for small tool work.

The bench in the southeast corner is used for air motor and hammer repairs, and on a rack on the south wall is carried a full line of these parts. A similar rack carrying threading machine dies for all the different makes in use but one, adjoins this last rack. A full line of tool milling cutters is carried on a board attached to the east

erecting shop pits, are placed in trucks in the main bay of the machine shop, the whole truck being then picked up by the travelling crane and carried down the shop to the track that runs across the machine shop into the tube shop. The tubes are either stored on end in the racks on the east wall of the tube shop just inside the door of the shop, until required, or if the rattler is ready, they are pushed along on the truck and spotted opposite the rattler, into which they are dropped through a slit in the side of the wall about 6 ft. above the ground. After the necessary rattling, they are dropped out through a lower slit on the tube shop floor, from which position they are picked up and piled on trestles in the middle of the floor to the west of the through track. They are then heated in the oil furnace adjoining, and the heated bad end sawed off in the hot saw along the north wall, the end being flared in the same heat by an air operated press alongside. Each tube, on the completion of these two operations, is piled on trestles to the west of this last machine, the ends lying in the same direction as before.

From a pile of safe ends along the west wall, one is slipped into the flared end of the tube, and the two parts heated in the oil furnace adjoining, followed by welding together in the rotary swedging machine alongside. On the completion of this oper-

Fig. 11.—Brass Room Lathes.

Fig. 12.—Tool Room Arrangement.

and carries them to the tender department at the opposite end of the shop.

The brass room, fig. 11, is the screened off section at the west end of the north bay. Along the wall, there is a work bench, with two rows of machines paralleling the wall. The south machine of the west row is a 20 in. turret; the next two, 20 in. brass lathes, and the remaining six all 16 in. brass lathes. There is also a 16 in. emery beside the brass room door. These machines are all on a 10 h.p. motor group drive.

The tool room, fig. 12, J. A. Wright, Foreman, is located in a lean-to building, 44 by $31\frac{1}{2}$ ft. wide, on the north side of the building near the centre. It is well equipped with a line of light machine tools, putting the shop in a position to handle a wide range of tools, both in the making and repairing. Between the tool distributing room and the tool room itself, there is an archway, about two-thirds of which has been built up with shelving, open from both sides for the storage of all sizes and shapes of lathe and planer tools. A large stock of all sizes and shapes of tools is here stored and classified according to size and shapes on the different shelves. Inside the entrance way and back of this series of shelves (left background in fig. 12) is located a no. 1 Sellers tool grinder, where an operator is

wall, close to the two millers.

The range of tool work undertaken is extensive, including not only the threading dies mentioned, but also special taps, standard taps for hurry-up jobs, special hobs, punches and dies, boiler tools, boiler snaps, drill, sockets, ratchets, jigs of all kinds, some motor and air hammer parts, and a wide range of special tools.

The tool-distributing room (background in fig. 5) is entered from the east side, with the delivery counter along the south side. Planer and lathe tools are kept in the rack to the rear, large and special reamers in shelves along the west wall, fine reamers and taps in drawers under the delivery counter. Air hose in rolls is stored on shelves in the door corner, and in the centre are kept the machine oil tanks with the waste boxes behind. Here are also stored the portable gas tanks and torches, the whole room being well arranged for the quick distribution of the tools, delivered on the usual check system.

The tube shop is housed in a building 75 by 45 ft., adjoining the machine shop to the north. In a lean-to structure on the east of this building, the tube rattler is housed, the driving motor being situated in the divided off south end of the room, entered from the outside, freeing the motor from the injurious dust of the rattler. The tubes, as removed from the boilers on the

ation, the tubes are piled on trestles to the south of this point, at an angle to the southwest corner.

Here the safe ends are again heated in an oil furnace, and that end drawn down in an air operated machine, the tubes then passing on to the trestle pile to the east, the flared ends pointing in that direction. The opposite end is then heated in the fourth oil furnace, and the tube sawed off to length in the hot saw adjoining. The tubes thus completed are stacked on end in the vertical racks in the corner, ready for removal to the erecting shop. It will be noticed that the tubes follow a continuous forward path without a single retrograde movement.

Along the side of the rattler room, there is a track on which two flat cars are kept spotted. Between the wall and the cars, there is a platform at the car level, approached by a ramp from the tube shop door. One car is for the reception of ashes, etc., and the other for the sawed off bad ends, simplifying the removal of these waste products, as produced, to the ash pile and scrap bins, the shop being almost automatically kept free of all unnecessary encumbrances. On both sides of the through tube shop track, in the yard beyond, there are storage piles of new tubes.

A concrete pit in the southeast corner of the tube shop, from which it is railed

off, contains a vacuum pump for taking care of the water returns from the heating system of the machine and adjacent shops, the hot water instead of discharging into the sewers, being pumped to the round-house nearby for boiler filling, an economical innovation. On a ledge in the same pit, there is a 4 x 4 in. oil pump for handling the oil system of the locomotive shops. At present, there are a couple of tubular tanks to the north of the tube shop for the oil storage, but these are being replaced by two 10,000 gal. tanks to be located away from the building on concrete foundations. The oil from the tank cars is discharged into these tanks, draining from the latter to the pump. This in turn forces the oil to small storage tanks at various points in the buildings. One is located in the northwest corner of the machine shop, for the boiler plate furnace, another in the tube shop for the four furnaces there, and a third in the blacksmith shop for the furnaces in that department.

The oxy acetylene plant is also located in the tube shop, in a small room in the northwest corner. Acetylene is generated at the Fort Garry station for train lighting purposes, and to save a duplication of plants, 12 gas tanks are employed for the transportation of the gas in bulk from the station for shop use, the gas being delivered in pressure tanks 15 ins. in diameter by 4 ft. long at a pressure of about 150 lbs. Oxygen is generated in the room in a small heated retort containing potash and manganese, the oxygen passing through three cleansing barrels, the first and last of which contain water and the intermediate one caustic soda, before entering a gas tank 4 ft. in diameter by 6 ft. high. From this, the oxygen is drawn off into a 4 3/4 x 2 1/4 x 5 in. compressor, delivering the gas into gas tanks, of which there are six, at a pressure of 300 lbs. These several tanks with torches, etc., comprise the portable oxy acetylene welding outfit.

The electrical department is housed in a small building adjoining the northeast corner of the machine shop. The equipment is small, comprising principally a couple of winding machines for the repair of motors. All the electrical shop equipment is cared for in this department, necessary repair parts being also stored here in a small store room set aside for the purpose.

The principal part of the machine and erecting shop equipment was furnished by the following firms:—Jno. Bertram and Sons Co., Dundas, Ont.; Canada Machinery Corporation, Galt, Ont.; Geo. Richards and Co., Manchester, Eng.; Prentiss Tool and Supply Co., New York; F. E. Reed Co., Worcester, Mass.; Wm. Sellers and Co., Philadelphia, Pa.; Alf. Herbert, Ltd., Coventry, Eng.; Brown and Sharpe Co., Providence, R.I.; Pratt and Whitney Co., of Canada, Dundas, Ont.; Quincy, Manchester and Sargent Co., New York; W. P. Davis Machine Co., Rochester, N.Y.; R. K. Le Blond Machine Tool Co., Cincinnati, O.; Flather and Co., Nashua, N.H.; Westinghouse Air Brake Co., Pittsburgh, Pa.; Springfield Mfg. Co., Bridgeport, Conn.; C. Redman and Sons, Halifax, Eng.; Lodge and Shipley Machine Tool Co., Cincinnati, O.; Footé-Burt Co., Cleveland, O.; Diamond Machine Co., Providence, R.I.; Bullard Machine Tool Co., Bridgeport, Conn.; Niles-Bement-Pond Co., New York; Gisholt Machine Co., Madison, Wis.; Warner and Swasey Co., Cleveland, O.; Dreses Machine Tool Co., Cincinnati, O.; Stevens Co., Galt, Ont.; Jones and Lamson Machine Co., Springfield, Vt.; Acme Machinery Co., Cleveland, O.; H. G. Hammett, Troy, N.Y.; R. M. Dougall Co., Galt, Ont.; Loew Mfg. Co., Cleveland, O.; F. Pratt and Co., Halifax, Eng.; Baush Machine Tool Co., Springfield, Mass.; Sibley Machine Tool Co.,

South Bend, Ind.; Francis Hyde and Sons, Montreal; and Whiting Foundry Supply Co., Chicago, Ill.

THE BLACKSMITH SHOP, fig. 13, J. Kiepler, Foreman, is a structure 144 by 100 ft., similar in design to the machine and erecting shop, with similar methods of lighting and heating, forming a 3 bay wing running north from the west end of the machine shop, with which it communicates through a swing door in the east bay, a standard gauge track passing from the machine shop into the blacksmith shop a few feet, with a through service track the length of the blacksmith shop, and extending about half way across the machine shop, for the movement of forgings to the latter shop for finishing. The bays are each 33 ft. 4 ins. wide, the walls resting on 4 ft. 8 in. wide footings at a depth of 6 ft. The columns, built up of two 8 in. channels and two 10 x 1/4 in. plates, are carried on 5 ft. square concrete footings at a similar depth. The roof is carried on 20 in. I beams, with a clear height at the sides of 20 ft. Each

shop. A double connection for the steam hammer exhaust exists. Normally, the exhaust is direct to the sewer, but in winter, the other connection draws the exhaust steam off into the heating system, supplementing the supply from the reducing valve, effecting a considerable saving.

Along the east wall (left side of fig. 14), there is a row of nine 3 1/2 ft. diameter and 26 ins. high open forges, each supplied with a small anvil and employed on small general smith work. Down the centre of the shop, there is also a double row of 11 similar open forges, equipped in the same manner and operating on the same class of work. Both the pressure and exhaust fans for all the open forges, driven by a 75 h.p. motor, are located in the upper story of a small room in the northeast corner of the shop. The pressure is obtained from a 3 1/2 ft. centrifugal fan with a 15 in. delivery pipe running down under the ground, branches running along the rear of each row of forges with a 3 in. delivery pipe to each. Each forge has a cone hood with an 8 in. suction

Fig. 13.—Interior Layout and Machine Distribution in Blacksmith Shop.

section has a 48 x 12 ft. skylight. The floor is of cinder.

The heaviest forging work is handled just inside the blacksmith shop, to the west of the machine shop door, shown in the background of fig. 14, an 18 ft. jib from the first column handling such heavy work as frames, etc., between a large open forge fire and a 2,000 lb. hammer. In the next section west, alongside the service track, there is another open forge fire to serve a 1,000 lb. steam hammer in the next section for lighter forgings. A 1,500 lb. hammer in the next section is used for general forge work. A steam pipe from an elbow at the heating system reducing valve in the roof of the southwest corner of the machine shop, connects with a receiver in the blacksmith shop, from which the steam hammer supply is drawn, the supply being steadier than if drawn directly from the main. Trouble from condensation in the pipes affecting the operation of the steam hammers is also reduced, a steam trap being attached to the lower end of the receiver, the drip being drawn off to the vacuum pump in the southwest corner of the tube

pipe leading up to a common suction pipe over each row in the roof trusses, enlarging to a 4 ft. diameter on entering an 8 ft. exhaust fan in the fan room, the fan discharging through the roof. The shop is thus kept remarkably free from smoke. The forge coal is stored in bins paralleling the shop on the east side, approached from the shop through the door on the east side. The coal is unloaded from a track running alongside.

In the fan room corner of the shop, there is a small forge fire for the tool blacksmith, with a small oil furnace to one side for tool tempering.

To the east of the double row of forges, there is a no. 6 Beaudry hammer, provided with a 4 ft. wide oil furnace, used principally on general car work.

In the centre of the north end, a double punch and shear with a capacity for 6 x 2 in. stock, is used for general blacksmith stock work, principally on cutting up bolt stock, and cutting up bolts that are made double ended in the upsetting machine for convenience in handling.

Bulldozer work is handled in the north-

west corner, where there is located a 20 in. stroke bulldozer having a ram 6 ft. wide and 1 ft. deep. This has an oil furnace 9 ft. wide and 3 ft. deep, butting on the end wall. The numerous bulldozer forms are stored in the ground floor room of the fan building. Adjoining the bulldozer, there is a $1\frac{1}{2}$ in. upsetting machine to the right in fig. 15 with an oil furnace similar to that for the bulldozer. This upsetter is employed

The equipment of the blacksmith shop was furnished by the following firms:—Jno. Bertram and Sons Co., Dundas, Ont.; Bell, Buffalo, N.Y.; Beaudry and Co., Boston, Mass.; Acme Machinery Co., Cleveland, O.; Clifton-Waddell, Johnstone, Scotland; Jno. Evans, Philadelphia, Pa.

THE FOUNDRY, A. Knight, Foreman, is located in a building $129\frac{3}{4}$ by 100 ft., directly to the north of the blacksmith shop,

convenience, the balance being permanently stored in the stores building.

Along the east wall, in the northeast corner of the building, are located the moulding machines for the stock production of parts required in large numbers. In the same row are three match plate moulding tables, where a large portion of the duplicate moulding work is handled. Another table to the south of the lavatory is em-

Fig. 14.—East Side of Blacksmith Shop, Looking South.

Fig. 15.—West Side of Blacksmith Shop, Looking South.

steadily on bolt and nut work, principally for stock, and has a normal capacity of 6,000 $\frac{3}{4}$ in. bolts in a 9 hour day. Alongside of this, for convenience in the final handling of the bolts here produced, are two 3 spindle $1\frac{1}{2}$ in. threading machines. Opposite this, there is located a no. 8 Beaudry hammer for general car work.

Heavy upsetting work is handled in the heavy upsetting machine to the south of the doorway opening, alongside of which there is an oil furnace of similar size to the last two. A wide range of dies has been made for this machine, some heavy and intricate forgings being produced in the ordinary course of work. The regular run of work includes large bolts, cotter bolts, eye bolts, grab irons, etc. Adjoining this machine is located a cold cutoff saw, 30 ins. diameter, for general work.

The balance of this part of the shop is given over to spring work. The equipment includes a special spring punch, cutting and punching spring leaves up to $6 \times \frac{1}{2}$ in.; a hand-operated clamp for fitting on the spring buckle; a spring roller with air-operated clamping mechanism, shortly to be replaced by a machine that not only clamps down the upper roll by air, but will also turn the upper roll, passing the spring leaf through; a spring leaf surface block; a spring leaf oil bath; and a spring oil furnace in the corner. This equipment is shortly to be supplemented by a buckle press. Adjoining the spring furnace, there is a small open forge with anvil for general spring work. There is also a small hand punch. This department has a capacity on the average of ten 14 leaf springs of 5 x 7-16 in. stock per day.

The oil for this shop is stored in a tank located in a central skylight, from which it feeds by gravity to the several oil furnaces.

The present capacity of the blacksmith shop has become taxed to such an extent that a 4 section addition to the north of the building is being erected, increasing the shop length by 96 ft., all as shown by the dotted lines to the north in the plan, fig. 1.

The end wall has been knocked out to make the shop open throughout. The machine and forge arrangements will be altered by this addition, but the general disposition will be along the order of the plan as at present in use.

as shown in fig. 1, and resembles in general design both that shop and the machine shop, being of brick construction with three bays, the central bay being 39 ft. 8 ins. wide, and the two side ones each 28 ft. $8\frac{1}{2}$ ins. wide, the roof trusses being supported by steel columns between the bays at 16 ft. intervals.

It has been designed with a view to the future, for the proportions are such that it will be amply large enough for the handling of locomotive and car repair work for some years to come.

ployed on general work.

In the east bay, it will be noticed that there is an industrial track for the handling of flasks, sand, patterns, etc., connecting at the centre with a similar track down the west side of the centre bay, through a central cross track, with turntables at each end.

Occupying the two central sections of the west bay, the cupola is located in a large room, designed for the accommodation of a second cupola, which may possibly be installed at a future date. The present cu-

Fig. 16.—Interior Layout and Arrangement of Foundry.

The central and east bays form the large moulding floor, this space being practically clear except for the lavatory similar to the ones in the other shops, in the third section from the north on the east side, and a pattern storage rack filling the whole end section in the southeast corner of the building. In this rack, all patterns in more or less constant use are stored for the sake of

pola is 46 ins. diameter, with a capacity of about 6 tons. The clear ground space in the cupola room provides ample space for the cupola room attendant in his work of lining the ladles and crucibles. The cupola tap is into the central bay, pouring on a line over the top of the service track along that wall. Ladles up to 4 tons capacity are in use, although the larger size castings

made here rarely require more than the $\frac{1}{2}$ and $\frac{1}{2}$ ton sizes. While in many cases the industrial track would be found of great service, it has been found that under ordinary circumstances the 10 ton electric crane down the centre bay is more useful in the handling of the ladles to and from the moulds, more especially as all the heavy work is handled in the central bay, and the light or hand ladle work in the east bay. In consequence, the service track in the building has fallen in disuse.

An air-operated elevator to the cupola charging floor, opens to the outside in the west wall, and is served by a service track along that wall. Parallel with the service track, there is a standard gauge track, as may be noticed in fig. 1, on which the scrap and pig iron is brought in car lots and piled on the ground on the side opposite to the foundry, from which it is drawn as required, and either run on the elevator in the small service cars, or what is more generally done, on wheelbarrows. Scrap iron is used for the most part, with an addition of from 10% to 20% of pig, depending on the class of work for which the casting is being made.

A small room adjoining the cupola room to the north contains the cupola fan, and the foreman's office in the southwest corner. In the section to the south of the cupola room there are two core drying ovens, both fired from a pit in that corner of the cupola room. The larger one opens to the centre bay, and has a 7 ft. gauge car running out into that bay for the reception of the larger cores. It is served by a 15 ft. jib crane, swinging from an adjoining column. To the rear of this oven, opening to the south, is located the smaller oven, with shelves ranged along both sides for cores of smaller size.

The core room occupies the south two sections of the west bay, and is equipped with a vibratory sand sifter and a small core machine. The sides are lined with core benches, and behind the north bench there is a small core rack. For the baking of these small cores for bolt holes, etc., there is a small oven on the east wall. With the exception of this part of the foundry, which is paved with concrete, the floor is of the usual moulding sand formation.

The casting cleaning room is the north-west corner of the building, and contains a large and small tumbling mill, as well as benches for the chipping of the larger castings. There is also a double 18-in. emery wheel for cleaning room purposes. The west wall of this room is set aside for the foundry carpenters. A service track runs across this room, connecting at the ends through turntables with the inside and outside systems of trackage.

Coke and core and moulding sands are stored in a corrugated metal building, 100 by 30 ft., to the north of the foundry, as noted in fig. 1. This is divided into three rooms, 50, 25 and 25 ft. in length, holding respectively coke, core sand and moulding sand. These supplies are drawn off from the west side of the building.

A yard track approaches the central doors on the north of the building, and on this track, close to the building, a flat car is kept spotted, as at the tube shop door, for the loading of the slag and clinker directly on removal from the cupola and core oven.

A service track leads from the south door of the building, a continuation of the service track through the blacksmith and machine shops. All castings are forwarded to the latter shop over this line. A cross track at the south end of the foundry, with turntables at each end, connects this through track with that along the west side of the building. This connection is of considerable value to the machine shop in facilitating the removal of cast iron scrap to the foundry.

dry pile. The smaller castings from the cleaning room are also brought along to the machine shop over this route instead of through the front door of the foundry.

A large proportion of the castings made up are for stock purposes, and are stored on the stores department platform. These stock castings are piled in the cleaning room until a sufficient quantity to fill a box car has accumulated, when a car is run along opposite the cleaning room door on the standard track, and when filled, it is re-

moved by the yard engine to the stores platform, minimizing trucking.

The system of heating the foundry is similar to that in use in the machine shop, a series of seven $1\frac{1}{2}$ in. coils of pipe passing along all four sides. The lighting is different, the flaming arc being used, suspended from the lower chord of the roof trusses.

The foundry equipment was supplied by the Whiting Foundry Equipment Co., Chicago, Ill. (To be continued.)

Grade Reduction on the Timiskaming and Northern Ontario Railway.

In the report of the T. & N.O.R. Commissioners, recently issued, one of the more important matters discussed is the proposal to reduce the gradients on the first section of the line, from North Bay to Liskeard, 112.6 miles. This is dealt with in detail by S. B. Clement, M. Can. Soc. C.E., Chief Engineer, and Superintendent of Maintenance. He points out that the line from North Bay to Liskeard was located as a colonization railway, and placed under construction before the National Transcontinental Ry. was projected. When the latter line was laid out, it was seen that the T. & N.O. Ry. would have to be extended to a junction with it, and handle a large amount of traffic to and from it. The extension of the T. & N.O. Ry. from Liskeard was therefore located on the same gradients and curvature as the N.T. Ry. The difference between the physical characteristics of the two sections of the line is strikingly shown in the following table:—

	North Bay to New Liskeard.	New Liskeard to Cochrane.
Distance.....	112.6 miles	140.0 miles
Ruling gradient—North bound.....	1.45 p.c.	0.5 p.c.
South bound.....	1.2 p.c.	0.4 p.c.
Maximum curvature.....	62°	45°
Curvature per mile.....	83'18"	27'56"
Tonnage rating (10 wheel class)—		
North.....	560 tons	1,460 tons
South.....	700 "	1,710 "
Maximum tonnage rating (new consolidation class)—		
North.....	1,070 tons	2,700 "
South.....	1,290 "	3,160 "

Surveys have been carried on at intervals since 1906 to see to what extent it is practicable to reduce the excessive gradients between North Bay and Liskeard. The shorter and lighter of these gradients can be reduced without changing the alignment, while the longer and heavier can only be eliminated by rebuilding on a new location, in some cases at a considerable distance from the present right of way. Wherever these diversions are necessary actual locations have been made and estimates of cost prepared.

The most striking feature of the profile of this section of the line is what is known as the Merrick Summit. The elevation of the North Bay yards at the junction with the C.P.R. is 652 ft. above sea level, and from Riddle north for about 25 miles the general elevation of the country is approximately 1,000 ft. above sea level. The intervening Merrick summit, with an elevation of 1,300 ft. above sea level, is the most serious obstacle to be overcome. In the original location, this summit was crossed by deflecting several miles to the east from North Bay, following the rugged shores of Four Mile creek and the North river to the summit. After an exhaustive examination of the country on both sides of the right of way, it was found that a lower grade from North Bay could be obtained by following Duchesnay creek and the summit could be crossed at an elevation of about 1,170 ft., or about 130 ft. lower than the present summit, connecting with the present line at mileage 35, just north of Riddle. If at all possible it is desirable that the ruling grades on the first division

should not exceed those on the second division, but it is a physical impossibility to obtain a 0.5% grade north from North Bay. This diversion, North Bay to Riddle, has been located with maximum curvature of 4°, and with maximum grades of 0.8% northbound and 0.6% southbound, all compensated for curvature. The diversion gives the lowest grade that can be obtained from North Bay without swinging the line far to the west to the Sturgeon river valley. With this diversion as a key to the situation it will be unprofitable to attempt to lower the grades between Riddle and Liskeard below 0.8% northbound and 0.6% southbound.

Having adopted these ruling grades, every grade in excess of them, between North Bay and Liskeard, was carefully examined. It will not be necessary to reduce a number of the shorter of these grades as they may be operated as momentum grades. The reduction of the grade between Liskeard and Cobalt from 1% to 0.6% can only be accomplished by a diversion that would pass at a considerable distance from the present station grounds, at Haileybury and New Liskeard. For this reason, it is advisable, for the present, to overcome this grade by means of a helper engine service.

The following summary statements show the proposed method of reducing all grades between North Bay and Liskeard to a maximum of 0.8% northbound and 0.6% southbound:—

Location, mile to mile	Method of reducing grade.	Estimated Cost.
2. 35.	Diversion	\$1,482,500
40. 41.2	Train filling	50,120
47.9 48.5	"	25,610
51.7 52.5	"	11,000
57.8 59.	"	39,100
60.4 61.8	"	33,280
62.5 63.3	"	9,200
66.7 73.2	Diversion	367,675
74.5 75.3	Train filling	16,225
90. 94.	Diversion	220,000
100. 100.5	Train filling	8,400
101. 112.	Helper engine service.	
Total		\$2,263,110

The total length of the North Bay-Riddle diversion will be 30 miles, replacing 33 miles of present line. The curvature on diversion averages 71°, and on the present line 93° per mile. The total rise and fall is as follows:—present main line—rise, 747 ft.; fall, 374; diversion—rise, 634 ft.; fall, 258.

Railway Bridges Over Navigable Waters.
—The Board of Railway Commissioners has given notice in regard to applications for approval of bridge plans, that in all cases of bridge work over water in which there might be the slightest doubt as to it being navigable or not, railway companies must, in addition to the papers heretofore forwarded in support of their applications, furnish the Board with evidence showing that the question of the navigability of the water has been taken up with the Public Works Department and that, if the Department deems the waters to be navigable, the structure is satisfac-

T.P.R. Terminal Yards at Coquitlam, B.C.—West End of Yards.

Terminal Yards at Coquitlam, B.C.—East End of Yards.

From a ladder track, the incoming traffic from the east is received into the northerly yard at the east end of the terminal, which contains seven tracks 2,900 ft long, with a capacity of 455 cars.

From this receiving yard, the cars are drawn off through a similar ladder track to that on the other end to the westbound hump, which conforms to the American Railway Association's standard; the hump for traffic in the reverse direction is similar to it. Both humps have a run-around track for solid through trains that have not to be broken up for classification at the hump. The westbound classification yard, into which the cars descend from the hump, has a double ladder approach, and contains 27 tracks 1,000 ft. long, with a capacity of 540 cars.

The bulk of the traffic is westbound, and in consequence, a large storage capacity for Pacific coast freight is required. The westbound classification yard thus has two outlets, the one from the south into the westbound departure yard, and the other into the storage or holding yard. A track leading out at about the centre of the classification yard discharging ladder makes approach for all tracks to the south of that outlet equally open to the westbound departure and the holding yards.

The westbound departure tracks are nine in number, each 2,950 ft. long, with a capacity of 390 cars. The holding yard has 37 tracks, each about 2,200 ft. long, with the

large holding capacity of 1,925 cars. To the latter yard, there are two entry tracks, with double ladders to each, and at the opposite end, there are also two departure tracks, one with a double ladder and the other with a single. These departure tracks converge to a siding on the main line, of sufficient length to hold 65 cars clear of switches, freeing the yard of trains ready to depart but awaiting orders.

The westbound traffic is received into a yard containing seven tracks, each 2,900 ft. long, like the reverse direction yard, with a capacity of 455 cars. From here, the trains are drawn off to the westbound hump, located directly south of the westbound classification yard, which is similar to the reverse direction hump.

The eastbound classification yard contains 20 tracks, with a capacity of 649 cars. The length of the yard being 2,300 ft. overall, approached at either end by a double ladder.

The eastbound departure track holds 521 cars on eight tracks, each 2,950 ft. long, both ends having a single ladder approach, leading off to the siding which runs on to the main line.

The repair track capacity of the terminal is for 120 cars in two yards, each yard containing four tracks, each 850 ft. long. These repair yards are located between the westbound receiving yard and the eastbound departure yard. These yards are approached by freight moving in either direction, for

both of which they are equally convenient. In addition to these two repair yards, there is a bad order track adjoining each of the yards, to which the cars requiring repairs can be shunted awaiting removal to the repair yards.

Four tracks with a total capacity of 30 cars are run from the westerly end of the westbound receiving yard to the running track along the north side of the eastbound departure yard, for the reception of cabooses. These are removed from the trains as they arrive from the west, shunted to these tracks, and are in a position to be as easily shunted to the rear end of the eastbound departure yard, along the running track. No provision for cabooses is made at the west end of the terminal, as the traffic from that point into Vancouver does not require the use of a way car.

At the northwest corner of the terminal yards a 12 stall roundhouse is under construction to be equipped with the usual divisional shop facilities. Provision is being made for the extension of the roundhouse to 48 stalls, when the demand arises. The coaling station and the ash and sand plants are situated north of the holding yard, directly east of the roundhouse, which is to be approached from the east. Coal cars for the coaling dock are accommodated on the four tracks to the east of the coaling dock.

Incoming locomotives from the east, after dropping their trains in the incoming yard,

come out at the west end of the yard, and proceed to the roundhouse along the north-erly of the two through running tracks to the north of all the trackage. Similarly, locomotives to depart easterly, leave the roundhouse along the other track, coming down through the yards on a running track to the east end of the outbound yard, where the train is picked up.

The yard tracks throughout the body of

the yard are 12 ft., centre to centre; the running and ladder tracks are 16 ft., centre to centre, from parallel tracks; the repair yard tracks are alternately 16 and 24 ft. centre to centre.

The plans for these yards were prepared in the office of J. G. Sullivan, Chief Engineer Western Lines, in the early part of this year.

A Talk to Ticket Agents.

By A. E. Duff, District Passenger Agent, Grand Trunk Railway, Toronto.

The following paper was read at the Canadian Ticket Agents Association's annual meeting at Ottawa recently:

As the majority of you are older both in years and ticket work than I am, I doubt if there is anything I can say in connection with passenger work that you do not already know. However, I will speak as if you were all ticket agents in my territory, on a few subjects that are constantly under my observation, viz.:—filing tariffs and circulars; displaying advertising matter, public time tables, etc.; newspaper advertising; through ticketing and exchange orders; ticketing children; soliciting travel.

THE FILING OF TARIFFS AND CIRCULARS in such a manner that they can be readily referred to is most important. It is annoying to a passenger whose time is limited, or who is leaving on a train due in a few minutes, to watch an agent look through several tariff binders or circular books for the fare, and this can be avoided if agents familiarize themselves with the various tariffs and circulars by checking them over frequently with the list sent out by the general passenger agent, so that when asked for a fare they will know at once what tariff it is in and where that tariff is.

J. A. Mackenzie, City Passenger and Ticket Agent, G.T.R., at Woodstock, Ont., has the best filing system I have seen, and I am sure those of you who have seen it will agree with me. I will not attempt to describe it any more than to say that the tariffs and circulars are placed in drawers in almost the same manner that correspondence is kept in a vertical filing cabinet, a separate pocket for each tariff and circular, with the name at the top so that it can be seen at a glance. I would suggest that any agent who is not satisfied with the system he is using, get particulars of this system from Mr. Mackenzie, who I am sure will be pleased to give it.

An agent who has spent some time looking for a fare, and then quotes as if he was not sure it was correct, does not inspire confidence, and I have known of cases where traffic has been lost on that account. Passengers contemplating a trip usually make a tour of the ticket offices for fares and information and the agent who can reply without hesitation generally secures the business.

A proper filing system also reduces the number of requests to the district or general passenger agent for fares and other conditions, and as these requests are usually sent by wire it will relieve the already overburdened wires.

DISPLAYING ADVERTISING MATTER, Public Time Tables, etc.—Posters advertising reduced fares for certain events should be displayed promptly on the authorized date; failure to do this may result in loss of revenue. Suppose the ticket offices of two competitive lines are adjacent, one displays a poster quoting reduced fares to a certain point and the other does not, is it not natural that passengers who intend to take advantage of the reduced fares will enter the office advertising them?

These posters should be removed promptly after the last date that tickets are on sale. As far as possible such advertising matter should be placed in suitable frames, as the practice of hanging posters, etc., on walls or in windows is not attractive.

Public time tables should be placed in the frames provided for that purpose, in hotels and other public places, as soon as received. Time tables usually contain important changes in the schedule of trains. It is most desirable that the public be made aware of such changes as quickly as possible, and the most effective way of doing this is by displaying the time tables promptly. Agents who do not receive time tables concurrent with a change of time,

A RAILWAY OFFICIAL'S APPRECIATION OF RELIABLE INFORMATION.

J. O. Walsh, Superintendent, Motive Power and Operation, Anticosti Island Railway, writes:

"Enclosed please find postal note for \$2, for two years' subscription for your very valuable publication. Canadian Railway and Marine World is an old friend and I wish to be sure of it for the next two years. No railway man in Canada knows better how reliable your publication is."

should notify their district passenger agent immediately.

Steamship posters, giving sailing dates of the various steamships should be kept in the frames provided by the steamship companies, and not hung loosely. A poster out of date is as useless as a fifth wheel to a wagon.

NEWSPAPER ADVERTISING.—Advertisements appearing in the newspapers should be carefully checked to see that the fares, dates, time limits, etc., are correct. Agents can render mutual assistance by suggesting advertisements that would be most suitable to their district. I have seen railways advertise their service to a certain point, when the trend of travel from the city in which the advertisement appeared, was to points in an opposite direction. This was no doubt caused by the individual who prepared it not being familiar with conditions in that district. All items appearing in the press, whether complimentary or otherwise to the railways, should be sent promptly to the district or general passenger agent with any remarks that seem pertinent.

THROUGH TICKETING AND EXCHANGE ORDERS.—Unfortunately it is necessary to use exchange orders at small offices where the sale of foreign tickets is not large. These orders have to be exchanged en route, and are therefore the cause of more or less inconvenience to the passenger for several reasons, although I will only mention three, viz.:—

1. In some cases the passenger is obliged

to leave the train during the time allowed for changing locomotives at some terminal point and rush to the ticket office to have his order exchanged; he is uneasy, fearful that the train will pull out without him. If he has a wife and family on board, they pass through the same state of anxiety.

2. If the order is to be exchanged at a large office, say, Toronto, even if there is ample time between trains, it is not unusual during the summer season to find a long line of tourists ahead with orders calling for round trip tickets to the Pacific coast that take some time to prepare and the result is a long delay.

3. If the order calls for a return ticket, it sometimes happens that the exchange clerk omits to return the portion reading from the station the order is exchanged at to starting point, and the error is not noticed until the passenger presents the ticket at his final destination to have his baggage checked on the return trip, with the result that baggage is checked only to the station where the order was exchanged, and on arrival there the passenger has to visit the exchange office in the hope of finding his ticket. If he is not successful he must purchase another ticket to his home, recheck his baggage and file application for refund.

Endeavor in all cases to ticket your passenger through to actual destination or nearest point thereto authorized in your tariff.

If you have not the required coupon ticket in stock, and time will permit, send an exchange order, or write to your district passenger agent, specifying the route desired and the proper coupon ticket will be furnished. Be careful in quoting through fares, but at the same time do not be fearful about making a mistake to the extent that you suggest ticketing to some intermediate common point and have the passenger repurchase, as there is the almost certainty that it will cost him more money, and there is the possibility, at least in some instances, of the company you represent getting a shorter haul than need be.

TICKETING CHILDREN.—I assume that every ticket agent here has been asked at some time or other by parents or guardian if their boy or girl can travel free. Always explain what the rules are regarding the transportation of children. Every time you persuade parents to purchase proper tickets for their children, you prevent the possibility of a dispute and unpleasantness on the train with the conductor, who has no option but to collect the proper fare. It is well to remember that two half fares are equal to one full fare.

SOLICITING TRAVEL.—Additional traffic can be stimulated by systematic solicitation. Practically every agent knows where business may be found, but very few I find have any particular system of soliciting. I would suggest that each agent prepare a list of the various labor bureaus, steamship agents, contractors, business houses, etc., in his vicinity, and make a practice of calling on them periodically, leaving a folder or two each time, keep a record of the date of each visit, and the business secured or expected, and I am sure that at the end of six months the results will surprise you.

In conclusion, I may say that helpful suggestions are always appreciated.

Appropriations sufficient to eliminate many grade crossings within the limits of greater New York are about to be asked for by the Public Service Commission. The total sum necessary to carry out this programme will be about \$6,000,000, it is said, and the commission has made the first move by a preliminary request for \$1,500,000 for 1913.

Railway Mechanical Methods and Devices.

Handling Tender Truck Repairs at C.P.R. Winnipeg Shops.

In these shops the department for the repair of locomotive trucks is well laid out for convenience in the handling of the work. Through the centre of the truck repair department there is a cross track, the full width of the light machine tool bay of the locomotive shop.

Paralleling this through track, with a

An old coach air brake cylinder is buried under the floor in front of the machine, the plunger extending through the floor. A hook at the upper end of the plunger makes a loose connection with the front of the hinged loop, so that the loop can be raised. The upper end of the stroke is so set that the upper surface of the loop is at the level of the lathe opening.

The coach wheel lathe is near one end of the shop, near the end door, through which the mounted wheels are rolled on

Wood Lathe Caliper Device at Grand Trunk Railway London Shops.

A wood lathe in the carpenter shop of the G.T.R. car shops, at London, Ont., has a calipering attachment applied by W. H. Butler, the operator, which is shown in the accompanying illustration. In general, it resembles the calipering attachment to be found on all modern coach wheel lathes.

Small Bridge Crane for Truck Repairs.

Attachment for Rapidly Mounting Wheels in Coach Wheel Lathe.

track on each side, is a wider gauge track—about 8-ft. gauge—on which a small bridge crane operates, as shown in the accompanying illustration. The end legs of the bridge are composed of channel sections, set at an angle to each other, joining at the top, and braced halfway down and at the bottom, double flanged wheels at the outer ends of the bottom bracing supporting the structure, permitting it to be moved from one position to another. As will be noted in the foreground, the bridge can be clamped in position by the attachment, which consists of a couple of pieces of bar, clamped together by a single bolt. The cross member of the bridge is a flat bar section, as the only strain to which it is subject is one of tension.

From each end of the bridge a jib crane, with a radius of about 7 ft., has a free arc of movement of nearly a full circle. They are supported by heavy vertical rods secured in bearings at top and bottom of the side members of the bridge.

On each jib arm a block and chain is provided, by means of which any part of the truck may be removed at will to the floor alongside, or on to an awaiting truck. This relieves the overhead cranes, and is at the same time more convenient, making it possible for a double gang to operate without interference. It has the added advantage of being movable to the job, or to the point most convenient to it.

Mounting Passenger Car Wheels in Lathe at Canadian Northern Railway Shops.

An attachment is in use at the C.N.R. Winnipeg shops for the easy mounting of passenger car wheels in the car wheel lathe. Attached to the front of the lathe there is a looped section of bar iron, hinged thereto, the upper face at the inner end being at the level of the lathe face cut-out, through which the axles roll into position in the lathe in the usual manner.

Wood Lathe Caliper Device.

a track into position, a few feet in front of the lathe. Here they are turned around a quarter turn on a small sunken floor jack, lowered, and then run forward until the axle strikes the loop. Turning on the air raises the outer end of the loop, making it only necessary to roll the wheels along on the axles into the lathe.

A practice of leaving a portion of station water tanks beneath the spout pipe as a reservoir in which sediment in the water supply may settle and get drawn out without passing into the locomotive tank, is finding its way into favor.

Back of the lathe spindle, there is a projecting lug of wood, extending to just beyond a line at right angles to the lathe centre. Across the face of this lug, there is a movable wooden member, carrying a hinged piece of thin sheet iron, as indicated in the operator's hand. For duplicate work in quantities, the operator turns down the first piece to the proper diameter, and then sets the movable piece up towards the job being turned, until the strip of iron when raised in a horizontal position will just scrape the wood when raised and lowered by the operator in the manner shown.

In operation, the operator, after placing the rough block to be turned down in the lathe, swings the caliper leg over so as to rest on the job, and after the several passes of the cutting tool along the rest, sufficient material will have been removed to let the leg drop, advising the operator automatically of the fact that the stock has been removed to the proper diameter. The finishing of the stock to the final shape on the face and corners is then a simple task. The job shown in the lathe is that of making small wooden handles such as are found on boiler water gauges. These are screwed on the end of an arbor screw, turned to diameter by the use of the caliper gauge, and then shaped.

Incidental to this method of turning up work, attention is drawn to the system of air draft. A suction funnel is located directly beneath the cutting tool, the horizontal section of the suction pipe being telescoped so as to be useful in all positions, for all diameters of work being turned. A suction pipe along the wall at the rear of the lathe connects to this pipe across the ways of the lathe. This rear pipe has a long opening in the front, a corresponding sleeve on the end of the cross pipe covers this opening, so that the suction connection may be adjusted to different positions along the lathe bed. The movement is now within about 6 or 7 ins., but could be extended to the full length of the lathe bed.

Air Hammer at Grand Trunk Pacific Railway Shops.

The G.T.P.R. shops at Rivers, Man., operate under conditions peculiarly their own, for the motive power repairs of a system that already extends over upwards of 2,000 miles and is rapidly increasing in both mileage and volume of traffic, are all handled at this point, which has only been equipped as a divisional point, with only the small buildings to be found at such a point on a line that has no branch lines emanating from the divisional point. The equipment of the shop has of course been increased beyond that contemplated for the divisional shop, but at the same time, the equipment added has only been that absolutely necessary to carry on the work. In consequence, considerable ingenuity on the part of the different foremen has been necessitated to handle the motive power repairs with the machines at their disposal.

In the blacksmith shop, one of the most essential of all the tools found in the usual railway repair shop was missing, viz., a steam hammer. The foreman, S. Lewis, realized that one must be had, and not seeing one coming in the usual channel, set about making one, the hammer shown

municates with the outside. A rod fastened to the rear of the hammer head, connects with an air valve in the pipe connection to the upper end of the cylinder, the upper end of the rod being slotted, for reasons to be explained. With the hammer in its lower position, the upper end valve is held closed. On pressing the foot treadle, the air enters the annular space around the bottom of the cylinder, the exposed surface being slightly more than sufficient to raise the dead weight of the hammer. On rising, the upper end air valve remains closed until the plunger has travelled the length of the slot, when the valve commences to open; and by the time the plunger is at the upper end of its stroke, the air is on full, forcing the hammer down smartly, adding impetus to the hammer above that given it by gravity. The downward plunge is against the force of the air acting under the hammer, but the latter is so slight as to be negligible.

As the hammer descends, the $\frac{3}{8}$ in. opening in the side of the plunger rod becomes exposed below the bottom of the cylinder, the pressure relieving itself from the upper end of the plunger almost instantly by the escape through this hole. As the plunger still further descends the slotted rod at the rear closes the valve at the top. After striking, the operation repeats itself automatically.

The stroke of the hammer is $6\frac{1}{2}$ ins., and the air pressure is normally 70 lbs. Any refinements in the intensity of the force at which the hammer descends may be simply regulated by the foot treadle. From the fact that the stroke is so short, it is not possible to work very heavy material, but it is a common practice to weld pieces up to $1\frac{1}{2}$ in. diameter.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, M. Can. Soc. C.E., District Engineer, Canadian Northern Ontario Ry. Sudbury-Port Arthur Line, Sudbury, born at Pittsford, N.Y., Dec. 7, 1874.

E. Alexander, Assistant Secretary, C.P.R., Montreal, born in Yorkshire, Eng., Dec. 8, 1862.

J. H. Barber, Engineering Department, C.P.R., Montreal, born at Cobourg, Ont., Dec. 20, 1856.

H. E. Bissell, Right of Way and Claims Agent, Grand Trunk Pacific Ry., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, Division Engineer, C.P.R., Calgary, Alta., born at Sherbrooke, Que., Dec. 25, 1866.

Harold Browning, steamship agent, etc., Windsor, Ont., born at Stamford, Lincolnshire, Eng., Dec. 2, 1864.

T. C. Burpee, Engineer of Maintenance of Way, Intercolonial Ry., Moncton, N.B., born at Sheffield, N.B., Dec. 11, 1852.

W. W. Butler, Vice President, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

M. M. Campbell, C.E., Building Inspector, G.T.R., Montreal, born at Bridgeton, N.B., Dec. 17, 1879.

J. A. Carroll, Road Foreman of Locomotives, District 1, Canadian Northern Ry., Rainy River Ont., born at Chilton, Wisc., Dec. 14, 1865.

A. H. Chave, Purchasing Agent and Assistant to First Vice President, Canadian Car and Foundry Co., Montreal, born at Williamsbridge, N.Y., Dec. 26, 1872.

J. E. Entwistle, acting Superintendent, District 2, Western division, Canadian Northern Ry., Saskatoon, Sask., born at Streetsville, Ont., Dec. 1, 1859.

H. H. Gildersleeve, Manager, Northern Navigation Co., Sarnia, Ont., born at Kings-ton, Ont., Dec. 15, 1865.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex-General Superintendent, Canadian Northern Quebec Ry., now Receiver, Quebec and Lake St. John Ry., Quebec, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, Manager of Construction, Mackenzie, Mann and Co., Ltd., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, M. Can. Soc. C.E., ex-General Superintendent, Eastern Division, C.P.R., Montreal, born at Mifflinburg, Pa., Dec. 21, 1864.

D. B. Hanna, Third Vice President, Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

S. P. Howard, ex-General Freight Agent, Eastern and Lake Superior Divisions, C.P.R., Montreal, born there, Dec. 30, 1865.

A. J. Isbester, Assistant District Engineer, Port Arthur district, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

R. Johnson, Locomotive Foreman, C.P.R., White River, Ont., born at Quebec, Que., Dec. 24, 1863.

B. B. Kelliher, Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, born in Ireland, Dec. 26, 1862.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, City Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

J. Niblock, ex-Superintendent, C.P.R., Victoria, B.C., born in York county, Ont., Dec. 21, 1849.

A. Price, General Superintendent, Alberta Division, C.P.R., Calgary, born at Toronto, Dec. 6, 1861.

G. D. Robinson, Assistant Export and Import Freight Agent, C.P.R., Toronto, born at St. John, N.B., Dec. 7, 1877.

C. Schreiber, C.M.G., Consulting Engineer, Department of Railways and Canals, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

F. P. Smith, Secretary, Richelieu and Ontario Navigation Co., Montreal, born there, Dec. 23, 1873.

C. E. E. Ussher, Passenger Traffic Manager, C.P.R., Montreal, born at Niagara Falls, Ont., Dec. 29, 1857.

H. H. Vaughan, Assistant to Vice President, C.P.R., Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

W. Wood, Locomotive Foreman, C.P.R., Megantic, Que., born at Montreal, Dec. 6, 1863.

Air Hammer Made of Scrap Material.

in the accompanying illustration being the result.

All the parts that enter into the construction are taken from the scrap pile, and represent old parts from locomotives. The frame of the hammer is an old locomotive drawbar, with the ends bent around parallel to each other; the base is an old locomotive buffer centre casting, with the drawbar bolted thereto and the whole standing on a wooden block; the cylinder at the top is the end of a locomotive axle, turned with flange and bored out parallel the full length. It will thus be seen that the major portion of the hammer parts are such as may be found on almost any shop scrap pile. The plunger rod is almost the full diameter of the cylinder, with a forged block at the lower end for the hammer head.

To the upper and lower ends of the cylinder, there are air connections, leading from a common air pipe up the rear of the machine, in which there is a valve operated by a treadle extending around the wood base for the convenience of the operator. Once the air is turned on by the pressing of this treadle, the hammer continues automatically, stopping on the release of the foot treadle.

The manner of the automatic operation is as follows: Through the centre of the plunger rod, there is a 1 in. hole, near the lower end of which a radial $\frac{3}{8}$ in. hole com-

A Laundry Car has been introduced on the Russian government railways for the use of the Imperial troops. The car is 9 ft. 10½ ins. wide and 13¾ ft. high outside at centre from rail, and is built according to the Russian standard 5-ft. gauge. The equipment includes steam boiler, condensing tank, feed pump, injector, steam engine, cold and hot water tanks, soda cleansing medium, washing machine, draining box, centrifugal dryers, mangle, fans, ventilator, and disinfecter, together with ironing board, with heaters at the finishing end, the central portion being used for drying and storing the linen.

Handling Wheels at Grand Trunk Railway Port Huron Car Shops.

A handy method of handling and storing mounted car wheels from the time they arrive to the time they are ready to depart, has been developed at the G.T.R. car shops, Port Huron, Mich., the idea held in mind throughout being to so place the wheels in their journey through the repair shop as to minimize as much as possible the shifting about required, and at the same time make the arrangement as simple in operation as compatible with the arrangement

travel. The hoist thus requires only a short hose. The crane girders serve a double purpose, being used for the carrying of the electric power wires across between the shops. The power house is located in the background to the left, in fig. 1.

Both old and new mounted wheels are stored on the platform shown in fig. 2, alongside the coach shop. The near track is for the storage of old and used up wheels, while the other is for newly

end. Two tracks on the ground, in line with those on the platform, lead up to the end of the platform, and from flat cars on these tracks the mounted wheels are unloaded by rolling across the gap between the end of the car and the platform on boards. The storage tracks are thus filled from either end.

From the storage on the near track they are drawn off as required to the machine shop for dismounting and remounting with new wheels. The door to the machine shop is directly to the right in fig. 2, and to bring the wheels down the slope and switch them around into the machine shop with very little labor, has been accomplished

Fig. 1.—Air Hoist for Conveying Wheels between Shops.

Fig. 2.—Storage Platform for Incoming and Outgoing Wheels.

possible in the limited space that can be utilized.

The machine shop and coach shop are in the same building, the parts being in line with each other. Similarly situated, with an intervening passage way, is the freight car shop, parallel to the other two. Consequently, all communication between the freight and machine shops is across the intervening gap.

For transportation purposes between the

mounted wheels which are ready to be taken away.

The sources from which old wheels are obtained is twofold. They are either dismounted from trucks in the freight shop, or they come in from the terminal points along the line, where renewal stores are maintained from which to fit up the trucks anew. When the wheels come from the freight car shop, they are brought across on the hoist just mentioned and deposited

with the aid of a simple little device. Under ordinary conditions the wheels, if allowed to roll down the slope, gained considerable velocity, and when they reached the bottom they ran across the path into the machine shop, and came up hard against a brick wall of the air brake department immediately to the right (not shown in the illustration). The mounted wheels had then to be turned through a right angle and run into the shop. Allow-

Fig. 3.—Device for Switching Wheels into Machine Shop.

Air Driven Saw for Cutting Babbit.

two shops there is a single track overhead craneway, constructed of timber work, leading from within one shop to within the other, and supplied with an air hoist as shown in fig. 1. This hoist is constructed of a couple of old cylinders placed end for end, the cylinders being mounted horizontally, with the cable so mounted as to give a 2 to 1 movement. The cylinders being large enough to lift the largest trucks with ease under normal air conditions. Trucks and wheels are lifted bodily by this hoist and carried across to the shop required. To each of the uprights of the crane posts, there is an air connection from the shop, to which the hose from the hoist is attached for operation in any position along the

in the foreground in fig. 2, the two posts shown being two of the crane uprights. They are lowered on to the platform in the direction in which the wheels to the right in the immediate foreground are placed, and run up the incline on the interlocking tracks to the left. A great number of the mounted wheels come in from outside points as mentioned, generally on flat cars, and provision is made for the ready unloading on to this same track.

It will be noticed that the platform is at the level of the flooring of a car, as shown by the box car to the left. The far end of the platform drops off abruptly, like the edge of the platform alongside of the box car, and does not slope off as at this

ing the wheels to run down the slope unattended like this had serious objections, as the brick wall suffered materially from the impact of the sharp edges of the wheels. Likewise, blocking the wheels down the slope had objections from the fact that too much labor was involved, as the wheels are so heavy as to require at least two to handle. This led to the use of the wrinkle mentioned, and which is shown swung out of position just beyond the right wheels of the batch in the immediate foreground in fig. 2.

This device, located in its proper position, is shown in fig. 3. It consists of a small square sheet of boiler plate, to which is rivetted a piece of angle bent to a quarter

of a circle, with a piece of plate rivetted to the upturned leg of the angle, projecting to the height indicated. This turning plate, pinned at the near corner to the platform decking, can be swung back to the left out of the way, but when in operation it is swung to the right into the position shown, directly in line with the inner pair of tracks. The inner wheel of the pair allowed to descend the slope of the platform unattended, strikes this obstruction to its forward movement very forcibly, the inner wheel being stopped, the momentum carrying the outer wheel a quarter turn to the left, when the operator at the proper moment giving the inner wheel a push off, the remaining momentum is sufficient to carry the wheels on into the machine shop.

In the machine shop they undergo the usual course of dismantling in the hydraulic press, and, if necessary, the journals are turned down, and finally, new wheels are mounted. They are then brought out over the same path to the tracks along the wall in fig. 2. They can either be run up the slope on to these tracks, or else picked up by the small overhead travelling crane, and run along to be placed with the batch of the particular size to which they belong. The air hoist on this runway has a very short air connection, as it will be noticed that at short intervals along the wall there are air connections from an air main suspended from the wall.

The principal use for this travelling crane is in the picking out of a required wheel from the long line of wheels stored there, and carrying it to this end for transfer to the freight car to be introduced into a truck in that shop. Similarly, it is used for carrying the mounted wheel along to the far end of the platform, where the receiving flat cars are located.

The facilities for unloading and storing axles is also shown in this illustration, fig. 2. There is considerable clear space to the left of the storage tracks on the platform, on which axles are unloaded from cars on the track adjoining. They are also stored to the rear of the point from which this view was made, on the platform, as indicated in fig. 1, where they can also be unloaded from the same track to a lower level.

Babbitt Saw at Grand Trunk Railway Stratford Shops.

A very handy saw for cutting up piston packing rings, and other babbitt and composition articles, in use in the G.T.R. shops at Stratford, Ont., in the babbitting department, is shown on page 600.

In the centre of a small cast iron table, about 12 by 15 ins., there is a slot with a saw projecting through. This is driven from a small air motor on the left of the table, the motor being of the turbine type with blades on which the air impinges. To maintain the saw at a uniform speed and prevent fluctuations, there is an intervening flywheel. This saw is a most useful addition to any shop.

A saw of the same kind is in use in the pipe department for cutting off copper pipe and similar purposes.

The Bishop Construction Co., Montreal, has been placed in liquidation, and the Superior Court has appointed J. A. McDavis and D. C. Raymond as joint liquidators. The immediate cause of the order was judgment on a note for \$688, but previous to this judgment for \$15,000 had been given by default in other actions. The company had a contract on the Quebec and Saguenay Ry.

Stone Ballast From the Crusher to the Track.

The question of stone ballast is an extremely important one with the maintenance of way department of the principal railway. On railways where it can be procured, the ballast is either crushed by the railway or purchased from private parties. A thorough discussion of the kind of ballast, equipment for handling it, methods and amount necessary for making good track is considered timely, and your committee beg to submit the following:—

Rock ballast should be made from hard, tough, durable trap, flint, or limestone rock, or other hard stone, acceptable to the chief engineer or engineer of maintenance of way.

The stone should be broken to cubes, the maximum of which will pass through a $2\frac{1}{2}$ in. ring and the minimum of which will not pass through a $1\frac{1}{2}$ in. ring. The crushed stone should be free from screenings, dirt and rubbish.

Ballast can be handled in side dump cars with flat bottoms, or coal cars, but the Rodger ballast, Hart convertible cars, or any of similar type of ballast car on the market will secure very good results. Ballast after being unloaded should be handled with a spreader, the Rodger ballast plow giving very good results.

The track should be prepared for ballast by digging out all the old ballast down to the bottom of the ties, and rounded up to $\frac{1}{2}$ in. above bottom of ties in centre. This

A MASTER CAR BUILDER'S OPINION.

John L. Hodgson, Master Car Builder, Western Division, Grand Trunk Ry., Port Huron, Mich., writes:—

"I am very glad indeed to be a subscriber to Canadian Railway and Marine World, for the information it contains is very interesting. I look forward each month to its receipt, and enjoy reading it."

will keep ties from running together until track is filled with stone. This should be levelled off at end of ties.

All decayed ties should be removed and replaced with new ones. Ties should be properly spaced and track put to gauge and all spikes driven down so that ties will be tight up to rail. Then crushed stone ballast should be unloaded to fill up between the ties in centre of track. This will help keep track in line and prevent ties from bunching. Eight or 12 ins. of stone ballast should be placed under ties if possible and a minimum depth of 4 ins. should be maintained.

In raising track on a 9 in. raise, the track can be put up in one lift if a large force of men can be secured. Ordinarily the track is put up in two lifts. In raising in one lift the foreman in charge will soon learn by practice how many rails a train of 15 or 20, fifty ton cars will raise to the required height. The number of rails are counted off and sufficient ballast is unloaded and ploughed out. Four men are started making places for jacks. One end of the sight board is placed on stake, and board leveled. Four jacks are used; two, one-half rail ahead of others, the first pair raising the track about half the required height. No tamping is required with these jacks, as the stone runs under the track by its own weight. The second pair of jacks raise the track to the required height. A force of 20 men should follow behind, whose particular work is to tamp and these should be followed by a foreman and eight men to keep the track in perfect line. The

first half of the day should be given to raising the track, the balance of the day being devoted to tamping and lining.

Where two lifts are made, the ties should be tamped with shovels their entire length. After the second lift, the ties should be tamped with tamping picks or bars, the tamping extending from ends of ties to 12 ins. on inside of rail. Particular attention should be paid to tamping under the rail but the centre of the ties should not be tamped.

In dressing up single track with ballast, the ballast should be filled in at least within 1 in. of top of ties and should slope from ends of ties to edge of ballast shoulder. This shoulder should not be less than 4 ft. from gauge line of outside rail to the edge of shoulder.

Double track should be dressed in the same way, stone in centre ditch being level with stone in track. When the track is bonded for electric signals, it is very desirable that the stone be kept below base of rail. The track, after being raised, should be left from four to six days before dressing up.

In handling 600 to 1,000 yards of stone daily and giving track 9 to 12 ins. of raise, the force employed largely depends on the amount of traffic handled, and the views of the maintenance of way officials. A force of 40 to 50 men should be used in the work. A force organized as follows will give excellent results:—1 chief foreman. 1 assistant foreman to raise track. 1 assistant foreman to line track. 2 men flagging. 4 men digging out for jacks. 13 men on jacks, (4 digging holes, 8 on jacks, 1 with levelboard). 20 men tamping. 8 men lining. 1 water boy (or more if necessary).

In the discussion on the foregoing report a very general objection developed against the large sizes of stone ballast recommended, viz., from $1\frac{1}{2}$ in. to $2\frac{1}{2}$ ins., except that one member of the committee favored $\frac{1}{2}$ in. to $1\frac{3}{4}$ in. It was decided to change the recommendation, giving a smaller maximum size and a very much smaller minimum size, viz., from $\frac{1}{2}$ in. to 2 ins.

Railway Route Maps Approved by Minister of Railways.

The Dominion Minister of Railways has approved of the following route maps:—

Alberta, Peace River and Eastern Ry., Oct. 15, from Cochrane, Alta., to Edmonton and Peace River, about 475 miles.

Canadian Northern Ontario Ry., Sept. 30, revisions on Sudbury-Port Arthur line, 30.9 miles.

Canadian Northern Quebec Ry., Sept. 30, Huberdeau westward 12 miles.

Sept. 30, Rawdon to St. Donat, 42 miles.

Canadian Northern Ry., Sept. 30, revision of Thunderhill branch, 53 miles.

Sept. 30, revision of Humboldt-Calgary line, 30.9 miles.

Sept. 30, Bienfait to Estevan, 9 miles.

Canadian Pacific Ry., Sept. 30, Bergen, Man., northeasterly, 9.92 miles.

Erie, London and Tillsonburg Ry., Sept. 30, from London to Aylmer, about 19 miles.

Grand Trunk Pacific Branch Lines Co., Oct. 15, extension* of Moose Jaw northwest branch from Central Butte across the South Saskatchewan river, about 45 miles.

Manitoba and Northwestern Ry. (C.P.R.), Sept. 30, grade revisions between Minnedosa and Bredenbury, about 35 miles.

Montreal and Southern Counties Ry., Oct. 15, extension through Greenfield Park municipality, about $2\frac{1}{4}$ miles.

Toronto Eastern Ry., Sept. 30, Pickering westerly, about 12 miles.

Motor Car Under Test on Schomberg and Aurora Railway.

A short description of a motor car under test on the Schomberg and Aurora Ry., a division of the Toronto and York Radial Ry., operated by steam, appeared in Canadian Railway and Marine World for September. Since then, further information has been obtained.

The accompanying illustrations show the construction of the car. The truck is of a unique design, built up entirely of plate and structural shapes, a construction that is said to give the maximum strength for a given weight, lightening the construction materially. The wheel base is 120 ins., with 33 in. chilled cast wheels mounted on 4 in. axles. The journals operate in ball-bearing journal boxes, and are so arranged that the wheels and axles may readily be taken from the truck.

The motive power is a small gasoline engine, directly connected to a generator, the combined unit being supported from a frame supported from the truck on a spring suspension in such a manner that but little of the shock and impact of the truck is imparted to the motive power. The gasoline motor group contains a battery of four 4 cycle $5\frac{1}{2}$ x $6\frac{1}{2}$ in. cylinders, developing 36 h.p. at 600 r.p.m. This unit is directly connected to a 20 k.w. compound wound

centre of each side frame steady the car and keep it level.

The general dimensions of the car body are 34 ft. 7 ins. over all length; 8 ft. 2 ins. and 7 ft. 9 ins., outside and inside widths; and total height above rail of 11 ft. 8 ins. The total weight is about 13 tons, with a seating capacity of 38, giving a small unit dead weight of car per passenger. Experi-

wooden cage about 8 ins. high, arched by a longitudinal hand rail at a convenient height.

The heat of the hot jacket water from the engine is utilized for the heating of the car. Filling the balance of the car ends not occupied by the motorman's cabin, there is a radiator similar in construction to that found on automobiles, through which air from the outside is drawn in and heated. A sliding curtain in the end regulates the

Interior Arrangement of Gasoline Electric Car.

ence has demonstrated that it is possible to carry as many as 125.

The car is of the side entrance type, double ended with a symmetrical arrange-

ment of air to be drawn in, as determined by the weather conditions. In hot weather, provisions are made for deflecting the current of hot air, and discharging it outside.

The braking consists of a rack and pinion, the rack operating a vertical plunger in an oil cylinder, the oil from the latter being forced into the brake cylinders, one of which is mounted on each side of the car frame, the plungers bearing directly on the wheel.

The consumption of gasoline is said to be a gallon for from four to six miles of operation under normal conditions.

The car was under test from Oct. 3 until on into November, making two round trips per day between Schomberg and Aurora, a distance of 15 miles, or a daily running of 60 miles. All the passenger traffic was handled by this one car. Daily observations have shown the economy of operation claimed for it, the fuel and oil averaging about 4 cents a mile. While giving satisfactory service, it was considered that better operation could be obtained on lines with less steep gradients. On this line, the maximum is $4\frac{1}{2}\%$. The conclusions drawn were that the most satisfactory service could be produced on branch lines with grades not exceeding 2%, and for that service the car is well adapted.

In addition to the tests on the Schomberg and Aurora Ry., a trial trip under more satisfactory conditions was made as far north as Gamebridge on the Canadian Northern Ontario Ry., on which it was learned that, on the level, the car could produce a speed of from 40 to 42 miles per hour, and could generate as much as 32 k.w.

Gasoline Electric Car under Test on Schomberg and Aurora Ry.

differential pole generator. This comprises the power station of the car. To each axle there is geared in the usual manner a 25 h.p. compound wound motor, provided with a heavy series winding. These motors have a direct flexible connection from the generator, dispensing with the resistances and controllers. The connection between the generator and motors is such that as soon as the engine is accelerated, the shunt fields of the motors are pre-energized before the armature circuits of the motors are closed, giving a cushioning effect to the motors without the use of resistance and at the same time providing against the operator's misuse. The control of the car is entirely through the engine speeding up the latter to increase the car speed, and cutting off gasoline for coasting, eliminating standby losses.

The underframing of the car is also of steel of the same general construction as that of the car truck. It has a four point support on the frame. Nests of semi-elliptical springs at each end provide the main support for the car body, giving to the latter an easy movement, while at the same time lighter semi-elliptical springs at the

ment of the interior fittings. Inside the doors on each side are longitudinal seats, the balance being cross seats. The motorman's cabin is at the right hand side in the direction of operation. Here, the operation of the motors is controlled, cranking being

Truck of Gasoline Electric Car.

performed electrically by means of storage batteries, which are also used for illumination. The interior of the car gives little evidence of the nature of the power utilized, only the tops of the engine cylinders projecting through the car floor into a narrow

from the 20 k.w. generator. On the run from Galt to Toronto over the Grand Trunk Ry., when being delivered for the test, the trip was said to have been made in 2 hours, with the speed running up as high as 44 miles an hour.

This car was built in York, Pa., and was imported by the Preston Car and Coach Co., which has bought the manufacturing rights for Canada. The builders are truck manufacturers, not car builders, and it is probable that the body will have to be considerably changed in future construction, to meet Canadian conditions.

On the conclusion of the test on the Schomber and Aurora Ry. and C.N.O. Ry. the car was taken back to Preston, Ont.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Pressed Brick Rates.

17781. Oct. 16. Re order 17552, Sept. 21, directing, inter alia, the G.T.R. to restore the proportion, viz., 88c. per ton, of the joint rate of \$1.60 per ton charged on pressed brick from Bradford, Pa., to Windsor, Ont., within 45 days from date of order; and the application of the G.T.R. for a rehearing of the matter, and postponing the effective date of the order. It is ordered that the effective date of the order be postponed to such date as the Board, after a rehearing, shall determine.

Pulp Wood Rates to United States.

17826. Oct. 23.—Re application of International Paper Co. and others, under sec. 323 of the Railway Act, for an order disallowing tariffs of Canadian Pacific, Grand Trunk, Canadian Northern Quebec, and Temiscouata railway companies, increasing rate on pulpwood from the provinces of Ontario, Quebec and New Brunswick to eastern United States points, effective Sept. 1 and 2, and reinstating the present rates. Upon its being represented to the railway companies that the going into effect of the said tariffs on Sept. 1 would be prejudicial to Canadian shippers of pulpwood, who had entered into contracts based on the lower rate, the companies voluntarily extended the effective date of the said tariffs until Nov. 1, and upon the hearing of the application it is ordered that the said tariffs be suspended until Feb. 4, 1913.

Embargoes Against Traffic.

General Order 95. Nov. 2.—Re circular 87, calling upon railway companies to show cause why an order should not go prohibiting them from issuing an embargo against any traffic for a period longer than four days, without first giving the Board at least ten days' previous notice of intention to issue such embargo, and the reason why such embargo is to be issued: It is ordered that whenever a railway company, subject to the Board's jurisdiction, issues an embargo against any traffic, it shall, within 48 hours thereafter, file with the Board a copy of such embargo, with a statement of the conditions rendering such embargo necessary, the action required to remove such conditions, and the probable time such embargo will be continued. And when such embargo is withdrawn or cancelled, the company shall forthwith file with the Board a copy of such withdrawal or cancellation.

Riding on Locomotive Pilots.—The Board of Railway Commissioners has, from time to time, received returns of a number of accidents resulting in serious, and, sometimes fatal injuries to employees through riding on locomotive pilots, and has requested railway companies to issue instructions that this practice, except when switching in yards, must be discontinued under penalty of being disciplined.

The Death of A. Lichtenhein.

The news of the death of A. Lichtenhein, the Galena-Signal Oil Co.'s contracting agent for Canada, at his home, the Poplars, New Rochelle, N.Y., on Oct. 31, came as a sad shock to his large body of friends, particularly among railway officials, from one end of the Dominion to the other, for as stated in the last issue of Canadian Railway and Marine World, he was believed to be satisfactorily recovering.

On Oct. 13 he complained of a pain in his abdomen. The family doctor diagnosed it as appendicitis, and on the following day Dr. Brewer, chief surgeon of the Roosevelt hospital, New York, operated on him. A slight attack of peritonitis followed, but he recovered from that, and as the wound healed perfectly there appeared to be every hope that he would pull through. But thromboses developed in the veins of the right arm, accompanied by septic poisoning, probably caused by the gangrene thrown

The Late A. Lichtenhein.

into the blood from the appendix before its removal, and in spite of everything that could be done by four physicians, two of whom stayed continuously in the house, he succumbed.

He was born in New York city, Jan. 15, 1855, being one of a family of 11 children. His father died when he was two years old. He graduated from the high school at 13, and started work as runner in a bank. Then he became bookkeeper for a furrier, and while at that met Wm. Illsley, who induced him to try selling paint for Illsley, Doubleday & Co. Shortly afterwards he formed a partnership with J. L. Mott and the late A. W. Mott, as Dreker & Co., oil merchants, and succeeded in getting considerable Canadian business, putting their lubricating oils on several of the railway lines. But in the hard times of 1893 they found it advisable to sell out to the Galena Oil Co., and he became its contracting agent for Canada. In 1897 he was sent to Great Britain to introduce the Galena oils, and after being there about two years, re-crossed the Atlantic and again took charge of the Canadian business, as the sole contracting agent, and made a great success of it. He married in 1883 Miss Frank

Rogers, daughter of A. J. Rogers, who survives him, together with a daughter and a son.

"Lich," as he was affectionately termed by a host of warm personal friends among railway officials and others, was a most lovable character, kindly, generous, hospitable, even tempered, and always good natured. His devotion to his family was intense, their photographs were always in evidence in his rooms at the Windsor hotel, in Montreal, where he had his business headquarters, or wherever he might be staying, and not even a shooting or fishing trip, fond as he was of those sports, could keep him long away from them. He had a keen sense of appreciation of the beautiful, displaying this perhaps most particularly in regard to flowers, and when at home at New Rochelle in the summer, spent most of his time in his garden. He was also very fond of outdoor life generally, and was an ardent golfer.

The Galena-Signal Oil Co. sent out the following intimation:—"With profound sorrow we announce the death of Mr. A. Lichtenhein, on Thursday, the thirty-first day of October, at his home in New Rochelle, N.Y. His loyal and efficient services with this company for a period of over seventeen years speak more eloquently than words of his worth. His memory will be ever living in the hearts of his associates and his many friends."

Victoria and Sidney Railway Company

This company, which operates on Vancouver Island, and is a subsidiary of the Great Northern Ry., had gross earnings for the year ended June 30 of \$59,713.63; operating expenses, \$50,972.50; net earnings, \$8,786.13.

The Victoria Terminal Ry. and Ferry Co.'s gross earnings were \$5,236.51; operating expenses, \$3,072.69; net earnings, \$2,163.82.

The following are the directors and officers of both companies for the current year:—President, A. H. MacNeill, Vancouver, B.C.; Vice-President, L. C. Gilman, Seattle, Wash.; Sec.-Treas., A. M. Thomas, Seattle; Superintendent, A. F. Van Sant, Victoria, B.C.; other director, F. V. Brown, Seattle.

The question of the settlement of financial differences between the company and the city of Victoria is still under discussion.

Press reports state that an arrangement is being made under which the Canadian Northern Pacific Ry. will acquire the line, together with running rights on the mainland from Port Guichon, the landing point of the car ferry, and Vancouver.

Dominion Railway Subsidy Agreements.

The Dominion government has entered into subsidy agreements with the following companies for the construction of railways:—

Great Northern Mining and Ry. Co.—Sept. 12, from Little river through Belle Marche, to Eastern harbor, N.S., 3 miles.

Algoma Central and Hudson Bay Ry.—Sept. 27, from Sault Ste. Marie to the C.P.R. between White river and Dalton station, Ont., 200 miles.

Quebec Central Ry.—Sept. 25, from 30 miles from St. George, St. Justine parish, to Ste. Sabine parish, Que., 1.34 miles.

The Ontario Railway and Municipal Board's offices have been removed to the legislative buildings, Queen's Park, Toronto, from the Manning Chambers, Queen street west.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta, Peace River and Eastern Ry.—The Minister of Railways has approved of route map for this railway from Cochrane, Alta., to Edmonton and Peace river, 475 miles.

We are officially advised that it is proposed to start construction work at once on the section of the line between Duffield, Alta., about 40 miles west of Edmonton on the Grand Trunk Pacific Ry., to Peace River Landing, a distance of about 25 miles, and a branch line into Edmonton. The location plans for this portion of the line are practically completed and will be submitted to the Board of Railway Commissioners for approval at an early date. Arrangements are being made for the necessary plant and supplies and for the placing of construction contracts. It is expected to have this section of the line completed within two years.

Following are the officers and directors:—President, Lord Farrer, London, Eng.; Vice President, H. Muskett King, London, Eng., and Montreal; other directors:—Lord Vivian, London, Eng.; Hon. G. G. Wilson, York, Eng.; J. M. Synge, London, Eng.; F. Houlder, London, Eng.; F. W. Thompson, London, Eng.; F. A. Coehius, Baarn, Holland; E. G. Rykert, Montreal; Secretary and Treasurer, B. Maxfield, Edmonton, Alta.; Chief Engineer, J. H. Williams, M.I.C.E., Edmonton, Alta. (Aug., pg. 411.)

Algoma Central and Hudson Bay Ry.—The Algoma Central Terminals Co. has been incorporated under the Dominion Companies' Act to acquire land, lay out terminals, provide station and other buildings, and carry on various businesses in connection therewith. The capital is fixed at \$100,000, and the office is at Sault Ste. Marie, Ont. The provisional directors are connected with the Lake Superior Corporation's legal office. (Nov., pg. 557.)

Algoma Eastern Ry.—The Algoma Eastern Terminals Co. has been incorporated under the Dominion Companies' Act. for similar objects and with similar powers to the Algoma Central Terminals Co. The capital is also \$100,000; the office is at Sault Ste. Marie, Ont., and the provisional directors are the same as the A.C.T. Co.

Application is being made to the Dominion Parliament to extend the time for the completion of the Sudbury-Little Current section of the line. (Nov., pg. 557.)

We are advised that a contract has been let to the Foundation Co., Montreal, for the sub-structure of a bridge from Goat island to Manitoulin island, at Little Current, Ont. The work will consist of four piers and two abutments carried down to rock. The maximum depth of water is about 28 ft. The piers will be constructed by the open caisson method.

All Red Line Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from the eastern boundary of Quebec province to Winnipeg, and branch lines into Quebec city, Montreal, Ottawa, Port William or Port Arthur. Bicknell, Bain, Strathy and Mackelcan, Toronto, are solicitors for applicants.

Alma and Jonquieres Ry.—The Quebec Legislature is being asked to incorporate a company with this title to build the following lines of railway:—from Hebertville on the Quebec and Lake St. John Ry. northerly to Lake St. John between Grande Discharge and Petite Discharge, Que., 20 miles; from St. Joseph d'Alma easterly to Jonquieres, 30 miles. Cannon and Parent,

Quebec, are solicitors for applicants.

Athabaska Northern Ry.—Application is being made to the Dominion Parliament to declare the company's corporate powers to be in full force and to extend the time within which the line from Edmonton to Athabaska Landing, Alta., authorized to be built by the statutes of 1905 may be constructed. Smith, Markey, Skinner, Pugsley and Hyde, Montreal, are solicitors for applicants.

British Columbia and Alaska Ry.—Press reports from Fort George, B.C., Nov. 11, state that engineers have, after some months' work, completed the location of this projected railway to Summit lake, near there, and have suspended work for the season. (Jan., pg. 21.)

Cape Breton Coal, Iron and Ry. Co.—H. Mayhew, President, is reported as recently stating in Sydney, N.S., that the company expects shortly to start work on the extension of its railway to Mira, where shipping piers are to be built. The present line extends from the collieries at Broughton to a junction with the Sydney and Louisburg Ry.

Cariboo, Barkerville and Willow river Ry.—Application is being made to the Dominion parliament to extend the time for the construction of the line authorized to be built by chap. 64 of the statutes of 1911, and to authorize the building of the following additional lines: From Barkerville to the junction of the Clearwater and North Thompson rivers; from about 17 miles from the northerly terminus easterly to Bear river, about 20 miles.

Central Ry. of Canada.—Application is being made to the Dominion Parliament to confirm transfers and agreements made between the company and the following companies:—Ottawa River Ry., Central Counties Ry., Great Eastern Ry., Ottawa Valley Ry., Carrillon and Grenville Ry., and Ottawa River Navigation Co., and to amalgamate them with the C. Ry. of Canada; to extend the time for the building of the various lines authorized; to increase the company's bonding powers; to authorize the company to enter into agreements with other railway companies named, and to build the following additional lines:—from Laval county to Lake St. Mary, Argenteuil county, Que.; from the main line to St. Scholastique, Two Mountains county, Que.; through Hochelaga, Chambly, Vercheres and St. Hyacinthe counties to St. Rosche, on the Intercolonial Ry.; from the last named line through La Prairie and Naperville to the Intercolonial Ry. in the county of St. Johns; from Orillia to Goderich, Ont., connecting in Perth county with the line already authorized to be built to Port Stanley, Ont. (Nov., pg. 557.)

The Board of Railway Commissioners has approved location plans for the company's line in Montreal, mileage 0 to 5, on condition that the grade crossing at St. Michels road be eliminated.

Dominion Atlantic Ry.—In an interview at Montreal, Oct. 30, Sir Thos. Shaughnessy is reported to have said that all the bridges on the line are being renewed as fast as possible. The track will be relaid with heavier rails, and everything will be brought up to C.P.R. standards. He expects that the entire work will be completed within two years. He could make no statement as to the company's entrance into Halifax. At present the D.A. Ry. operates the Windsor branch of the Intercolonial Ry. under an agreement, thus securing an entrance to Halifax. (Nov., pg. 557.)

Dominion North Western Ry.—Application is being made to the Dominion parliament to incorporate a company with this title to build a railway from Regina, Sask., westward to Tuxford on the C.P.R., thence to Red Deer, Alta., with a branch through Battleford, Sask., to Fort McKay. M. J. O'Connor, Ottawa, is solicitor for applicants.

Edmonton, Dunvegan and British Columbia Ry.—Tracklaying is reported to have been started on the section of the line from Edmonton to Athabaska Landing, Alta., 129 miles. The rails for this section are about all delivered, and a contract for the last 100,000 ties required is reported let to Bell and McPhee. (Nov., pg. 557.)

Erie, London and Tillsonburg Ry.—The Minister of Railways has approved a route map of the section of this projected railway between London and Aylmer, Ont., 19 miles. (Nov., pg. 557.)

Esquimalt and Nanaimo Ry.—A contract is reported to have been let to Moore and Petlick, Victoria, for the grading of the Comox extension from the Big Qualicum river for 19.29 miles. This is the final contract on the extension from McBride Jet., along the east coast of Vancouver Island, to Courtenay in the Comox valley, 45 miles. Grading has been practically completed on 15 miles out of McBride Jet., and on 10 miles southerly from Courtenay. (Nov., pg. 557.)

Ha Ha Bay Ry.—See Roberval and Saguenay Ry. (Oct., pg. 501.)

Gananoque to Elgin, Ont.—The question of the construction of a railway from Gananoque to a junction with the Canadian Northern Ontario Ry. at Elgin, Ont., is under consideration, and a syndicate headed by J. C. Judd, Morton, Ont., has been formed to have surveys made.

Huron and Ontario Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the lines authorized by the statutes of 1911, and previous acts referred to therein. T. H. Kilgore, Toronto, is Secretary. (June, 1911, pg. 555.)

Intercolonial Ry.—Speaking at Halifax, N.S., Oct. 30, the Minister of Railways is reported to have stated that it is the intention of the Dominion Government to build new railway and ocean terminals about two miles south of the present terminals. The new docks are to extend for a mile and a half from the lumber yard to Point Pleasant park, and will consist of six piers each 1,250 by 300 ft., with one bulkhead landing pier 2,000 ft. long. This pier will have on it the immigration buildings, and will be used for landing passengers from the ocean liners. The immigration buildings and a grain elevator will also be located on it. At the other docks there will be accommodation for 30 ocean going steamers. The new terminals will be approached by a double track line which will branch from the main line at the Three Mile House, extend southerly through the low divide between Bedford Basin and the north-west arm, finally reaching the terminals under the lower end of Young avenue. The streets in the residential part of the city will be carried over the line by bridges. A new union station will be erected at the end of Hollis street, just north of the docks. The plans also include the raising of the breakwater at the lighthouse so as to give quiet water inside.

The Minister of Railways is reported to have informed a Truro, N.S., deputation, Oct. 30, that arrangements had been made to have an engineer go to Stewiacke as soon as possible to run a trial survey for the suggested line from Truro to Deane, and make an estimate of the probable cost of construction, and of the possible traffic. (Nov., pg. 557.)

Kettle Valley Lines.—A contract is reported let to W. Bouthron, Grand Forks, B.C., for the erection of station and other buildings on the Pentiction section.

The line is under construction out of Pentiction through the Okanagan valley. The work in the vicinity of Naramorta is reported to be very heavy, as it includes an 1,800 ft. and a 200 ft. tunnel, a lot of rock cutting and a switchback. (Nov., pg. 558.)

The Dominion parliament is being asked to pass an act authorizing the company to enter into an agreement with the C.P.R.; extending the time for the construction of the lines authorized to be built, and giving power to build the following additional lines:—From near Summer's creek to various mining camps about 15 miles southwest to Princeton, B.C.; from Vernon southerly through Kelowna to near Pentiction, B.C.; from the terminus of the branch authorized by sec. 2h, chap. 101 of the statutes of 1911 to the Otter summit about 30 miles south of Merritt, and from near Tulameen for about 50 miles up the Tulameen valley.

The Board of Railway Commissioners has authorized the opening for traffic of the portion of the line from Merritt, B.C., easterly for 29 miles.

The Spokane and British Columbia Ry., which is the section of these lines in the United States, proposes to build an extension to Spokane, Wash. It is reported that surveys are being made, and that construction will be started as soon as these are completed. The K.V. lines have recently come under the control of the C.P.R.

L'Avenir and Melbourne Ry.—Application is being made to the Quebec Legislature to amend the charter by changing its name and extending the time within which the line authorized to be built may be constructed. B. E. Reid, G. H. Bogie and J. Laferty are interested. Berque, Berque and Berque are solicitors for the company, and the additional applicants named. (June, pg. 300.)

Little Nation Ry.—The Quebec Legislature is being asked to extend the time within which the lines authorized to be built by the act of 1907, as amended by the act of 1910, may be constructed. (June, pg. 300.)

Michigan Central Rd.—Press reports state that it has been decided to proceed with the erection of a new machine shop and power house at St. Thomas, Ont., in the spring. (Oct., pg. 502.)

Montreal Manufacturer's Terminal.—Application is being made to the Dominion Government to incorporate a company with this title to lay out a terminal property on the St. Lawrence river, between Notre Dame street east and the river front, near Longue Pointe, Montreal. The company proposes to lay out the property on the lines of the Bush terminal at Brooklyn, N.Y.

North Ry.—A number of the engineers engaged on the survey of this projected railway from Montreal to the mouth of the Nottaway river on James Bay, have returned to Montreal, while E. A. Evans, M. Can. Soc. C.E., who represented the Quebec Government on the party which was surveying the bay end, returned to Quebec Oct. 25. It was expected to complete location plans for the line from the Nottaway river mouth to the crossing of the National Transcontinental Ry. at Bell river. The engineers are reported to have stated that only in a few instances will there be a maximum gradient of 0.25% eastbound, and that there are no difficulties in the way of construction. It is stated that contracts will be let for the building of this division by Jan. 1, and that the specifications will call for its completion by Oct. 1, 1914. The location of the route from Montreal to Bell river presents more difficulties, and it is

not expected that the location surveys will be completed until the spring. The route from Bell river as far south as Grand Victoria has been located and it is reported that construction on this section will be started simultaneously with that north of Bell river. (Nov., pg. 558.)

Northern Territorial Ry.—It is reported that two engineering parties are in the field north of Edmonton, Alta., making preliminary surveys for this projected railway. H. G. N. Neville, who is Chief Engineer, is expected to return to Edmonton in the spring. (Aug., pg. 412.)

Pacific and Hudson Bay Ry.—Press reports state that J. M. Ralston has returned to Bella Coola, B.C., after having completed a preliminary survey of the projected line as far as Fort Dunvegan. The line decided upon is said to be from Bella Coola to Fort Fraser, where it will cross the Grand Trunk Pacific Ry., thence to Fort St. James, to Fort McLeod, through the Pine river pass and down the Pine river to Fort Dunvegan. In all, the route as surveyed covers some 480 miles. (Oct., pg. 502.)

Pacific Great Eastern Ry.—We have been officially advised that P. Welch has been awarded the contract for the building of this railway, and that he has started work at Lillooet, B.C. As a consequence he has resigned office as Vice President. His successor in that office has not yet been appointed. A. Kellett, the contractor's superintendent at Lillooet, is reported to be arranging for the letting of subcontracts on the line northwesterly.

The property of the Howe Sound and Northern Ry. was taken over by the P.G.E. Ry., Nov. 9. The purchase, we are officially advised, includes all the constructed line, about 12 miles, rolling stock, surveys for extensions, good will, and all assets of every description. The miscellaneous assets include 3,000 ft. of waterfront at the head of Howe sound, and the unsold portion, approximately one half of the townsite of Newport, belonging to the Howe Sound Development Co. The purchase of this line simplifies the construction of the P.G.E. Ry. between Vancouver and Lillooet. The route maps for this section of the line are being considered by the Provincial Minister of Railways. E. White has been placed in charge of the contractor's office at Vancouver, and will have charge of construction between that point and Lillooet. (Nov., pg. 558.)

The Pacific Great Eastern Development Co. has been incorporated under the British Columbia Companies' Act to develop lands and other resources along the route of the P.G.E. Ry. The capital is fixed at \$250,000, and the provisional directors are:—T. Foley, P. Welch, J. W. Stewart and D. A. Tate.

Peace River Great Western Ry.—Edmonton, Alta., press reports state that the charter of this company has been acquired by French financial interests, and the Provincial Secretary is reported as stating that plans have been filed and that construction will be started in the spring. The line is projected from Edmonton northwesterly to the west end of Lesser Slave Lake, on to the Peace River Crossing, thence to Dunvegan. (Feb., 1911, pg. 113.)

Quebec Central Ry.—We are officially advised that the 134 miles of line from a point 30 miles from St. George to St. Sabine, for which a contract under the Dominion act granting subsidies in aid of certain railways was recently entered into, is an extension of the Chaudiere Valley-Cobans extension. The piece of line has been built, and has been in operation since Jan. 2, 1911. (June, pg. 301.)

Quebec Rapid Transit Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway

from Quebec easterly to St. Gregorie de Montmorency, northwesterly to Lake St. Charles; southerly to Cap Rouge, and thence easterly to Quebec, being a belt line through the county of Quebec, with branch lines, and to operate vessels in connection therewith, the line to be operated by steam, electricity or any other power. A. Tasheureau, Quebec, is solicitor for applicants.

Quebec, Portland and International Short Line Ry.—Application is being made to the Dominion parliament to incorporate a company with this title to build a railway from La Patrie, Que., to the International boundary line, thence along the valley of the North river to a junction with the Maine Central Rd., or the C.P.R. in Eaton township. Pringle, Thompson and Burgess, Ottawa, are solicitors for applicants.

Roberval and Saguenay Ry.—The Quebec legislature is being asked to pass an act changing the name to La Compagnie de Chemin de Fer Le Nord; authorizing the building of branches; authorizing the acquisition of the Ha Ha Bay Ry., charters, lines and property, together with power to extend this line from the Chicoutimi Pulp Co.'s mills to the confluence of the Riviere du Moulin with the Saguenay river; and fixing the amount of bonds to be issued. (May, pg. 240.)

Simcoe, Grey and Bruce Ry.—Application is being made to the Dominion parliament to extend the time within which this projected line may be built. B. Allen, Owen Sound, Ont., is Secretary. (June, pg. 302.)

Timiskaming and Northern Ontario Ry.—Track is reported to have been laid on the Elk lake branch to Jean Baptiste river, 12 miles. The bridge across the river has been completed and track is being laid on to the Montreal river, 10 miles. The bridge over this river is in course of erection, and it is expected to have it completed so that track can be laid into Elk Lake city by Dec. 31. (Nov., pg. 558.)

J. L. Englehart, Chairman of the Commission, is reported as stating that 20 miles of track have been laid on the Elk Lake branch, leaving 10 miles yet to be laid. The piers and cofferdam for the bridge over the Montreal river have been completed, and the steel work is being assembled.

The Ontario Government survey party returned to Cochrane, Nov. 5, after having completed the preliminary survey for the projected extension of the line to Hudson bay. The party, which was headed by W. R. Maher, has laid out a road to Moose Factory, at which point surveys have been made for a harbor by J. E. McMillan. The reports are being prepared for the government, but it is not expected that anything will be done in the way of construction for some time. (Nov., pg. 558.)

Western Dominion Ry.—A meeting of shareholders of the Alberta Pacific Ry. was held at Pincher Creek, Alta., Nov. 2, for the purpose of approving the sale of the company's property to the W.D. Ry. Co. The A.P. Ry. Co. was incorporated by the Alberta legislature, and the W.D. Ry. Co. has a Dominion charter and is controlled by the same interests. Recent Calgary press reports state that the W.D. Ry. Co. is a subsidiary of the Chicago, Milwaukee and St. Paul Rd. (Nov., pg. 559.)

Wetaskiwin, Yellowhead and Revelstoke Ry.—Application is being made to the Dominion parliament to incorporate a company with this title to build a railway from Wetaskiwin, Alta., westerly to the Saskatchewan river, thence following the Brazeau river valley to its headquarters, then along the Rocky river valley to the Yellowhead, thence westerly and southwesterly along the valleys of the Caure and Columbia rivers to Revelstoke, B.C. Loggie and Manley, Wetaskiwin, Alta., are solicitors for applicants.

Transportation Appointments Throughout Canada.

Allan Steamship Line.—H. F. BRADLEY, heretofore Assistant Passenger Manager, has been appointed Passenger Manager, vice G. H. Hannah, retired. Office, Montreal.

Bangor and Aroostook Rd.—ARTHUR HOLLAND has been elected President, vice F. W. Cram, resigned. Office, Bangor, Me. The office of General Assistant, formerly held by W. F. Cram, has been abolished.

Canadian Northern Ontario Ry.—Press reports state that W. A. BROWN, Superintendent Canadian Northern Ry. at Edmonton, Alta., is to be transferred to a similar position on the C.N.O.R. at Toronto. Up to Nov. 25 this had not been officially confirmed.

Canadian Northern Ry.—F. W. HARGRAVE, heretofore chief clerk to Purchasing Agent, has been appointed Assistant Purchasing Agent. Office, Winnipeg.

C. J. WILSON has been appointed Superintendent, district 3. Office, Winnipeg. Former district 3 is now designated as district 4 and remains under the jurisdiction of W. E. Roberts, Superintendent, Brandon, Man.

Canadian Northern Steamships, Ltd.—In consequence of the running aground of the s.s. Royal George near Quebec and the necessity of laying her off for repairs, considerable reductions have been made in the company's staff at various points. The position of General Agent at Montreal, heretofore held by J. H. HOSEASON, and that of Travelling Immigration Agent, heretofore held by J. F. SOUTHALL, have been abolished.

Canadian Pacific Ry.—H. C. GROUT, heretofore Superintendent, district 1, Atlantic division, Brownville Jct., Me., has been appointed Assistant General Superintendent, Atlantic division. Office, St. John, N.B.

N. R. DES BRISAY, Travelling Freight Agent for the maritime provinces, with headquarters at St. John, N.B., has resigned. No successor has yet been appointed.

H. FRAWLEY, heretofore Locomotive Foreman, Ottawa, Ont., has been appointed Locomotive Foreman, Farnham, Que., vice H. A. Amy, transferred to Schreiber, Ont.

C. HENDERSON, heretofore conductor, has been appointed Trainmaster, district 2, Atlantic division. Office, Aroostook junction, N.B.

H. IRWIN, M. Can. Soc. C.E., heretofore Right of Way and Lease Agent, has been appointed Consulting Right of Way and Lease Agent. Office, Montreal.

F. TAYLOR, M. Can. Soc. C.E., heretofore Division Engineer, Eastern division, has been appointed Right of Way and Lease Agent, vice H. Irwin. Office, Montreal.

Mrs. J. C. O'Donahoe, who died at Ottawa Nov. 12, was mother of J. V. O'DONAHOE, assistant to the General Manager, Richelieu and Ontario Navigation Co., Montreal.

T. E. DUNNE, formerly Intercolonial Ry. ticket agent at Pictou, N.S., and son of B. J. Dunne, Inspector of Police, Intercolonial Ry., died at Parkland, Alta., recently.

M. J. BUTLER, M. Can. Soc. C.E., formerly Deputy Minister of Railways and Canals, has resigned the general managership of the Dominion Steel Corporation at Sydney, N.S.

W. H. CUMMINGS, who has been in charge of the Grand Trunk Ry. exhibit at the Crystal Palace in England during the last two seasons, returned to Canada early in November.

D. McINTYRE, K.C., Kingston, Ont., has been appointed chairman of the Ontario Railway and Municipal Board in succession to Jas. Leitch, K.C., appointed a judge of the Ontario High Court.

MOTT SAWYER, formerly Superintendent, Bellingham Bay and British Columbia Rd., has been appointed Superintendent of Construction, Chicago, Milwaukee and Puget Sound, Ry., at Lewiston, Mont.

LORD STRATHCONA has been given the Royal Society of Arts medal for services in improving railway communication, in developing Canadian resources and commerce, and for services to the Empire in general.

P. CLARKE, Vice-President, Westholme Lumber Co., which carried out several contracts for what is now the Canadian North Eastern Ry., at Port Stewart, B.C., died at Seattle, Wash., Nov. 4, aged 47.

M. CAIN, for 55 years baggage agent at Newmarket, Ont., first with the old North-ern Ry., and subsequently with its successor, the G.T.R., died there Nov. 16, aged 65. He retired from active service in 1908.

SIR EDWARD CLOUSTON, who died in Montreal, Nov. 23, was formerly President Montreal Rolling Mills and also a director of the Alberta Railway and Irrigation Co. and the Cumberland Railway and Coal Co.

The Winnipeg Free Press, of Oct. 30, says that thirty years ago, viz., Oct. 30, 1882, M. J. HANEY, M. Can. Soc. C.E., now of Toronto, resigned the superintendency of the C.P.R.'s Pembina and Rat Portage divisions.

The Montreal Star recalls the fact that on Nov. 1, 1882, SIR THOS. G. SHAUGHNESSY arrived in Montreal to take up the duties of the position of General Purchasing Agent of the C.P.R., of which he is now President.

C. A. BOWMAN, of the engineering staff of the Department of Railways and Canals, Ottawa, was presented with a gold watch by the staff, Nov. 7, prior to leaving for a trip to Great Britain, where he will spend the winter.

GEO. LEE, who has been General Agent for the Chicago Northwestern Rd. in Winnipeg for some time, was presented with a gold watch and chain, Oct. 29, on his removal to Minneapolis, Minn., to another position in the company's service.

JOHN HALSTEAD, Division Freight Agent, C.P.R., Calgary, Alta., was married at Edmonton, Oct. 30, to Miss M. E. Riley, daughter of the late T. Riley, of Hounsfield Lodge, Calgary. Mr. and Mrs. Halstead spent their honeymoon in California.

CAPT. M. IRONSIDES, a well known lake mariner, died in the marine hospital, Goderich, Nov. 10, from bloodpoisoning, resulting from one of his legs being squeezed in a winch cable while his vessel was passing through the Sault Ste. Marie canal recently.

J. GAULT KINGSMILL, son of the late Nichol Kingsmill, K.C., formerly Canadian Solicitor, Michigan Central Rd., was married in Toronto, Nov. 10, to Miss Beatrice Tate, daughter of the late R. F. Tate, M. Can. Soc. C.E., of Mackenzie, Mann & Co.'s staff.

W. ROBINSON, who has been Travelling Passenger Agent, Grand Trunk Ry., with headquarters at Pittsburg, Pa., since June 1, 1906, died there of pneumonia early in November and was buried at Niagara Falls. He was formerly in the Intercolonial Ry. service.

W. A. HARRIS, station agent for the Intercolonial Ry. and the Dominion Atlantic Ry. at Windsor Jct., N.S., died there Nov. 14. He had been in the employ of the Dominion Government railways for 40 years, for 32 of which he was agent at Windsor Jct.

THOMAS BELL, who has been appointed Assistant General Advertising Agent, Canadian Pacific Ry., has been in the company's service since 1895, when he started as office

boy. He will relieve the General Advertising Agent of much of the company's exhibition work.

R. T. WHEELER, M. Am. Soc. C.E., heretofore Engineer of Construction, New York, New Haven and Hartford Rd., and Boston and Maine Rd., and Chief Engineer of the Boston Terminal Co., Boston, Mass., has been appointed Chief Engineer, Maine Central Rd., at Portland, Me.

A. H. SPERRY, who resigned his position as Assistant General Freight and Passenger Agent, Spokane International Ry., recently to enter the Pacific and Great Eastern Ry.'s service in British Columbia, was entertained at a farewell dinner by railway men in Spokane, Wash.

The death, on Nov. 8, of REUBEN WELLS, for many years Superintendent of the Rogers Locomotive Works, at Paterson, N.J.; removes another one of the group of men who had most to do with the development of American locomotive engineering during the '80's and '90's. He was 83 years old.

PAUL SEUROT, M. Can. Soc. C.E., M. Am. Soc. C.E., chief engineer in Montreal for Jacobs and Davies, Inc., consulting engineers, New York and London, Eng., has been awarded a Telford premium of the Institution of Civil Engineers of Great Britain for a paper published in its proceedings for 1911-1912.

W. McILROY was presented with a purse of gold and a gold locket by the members of the Peterboro Club, and a gold watch fob by the members of the Belmont Club, on his recent transfer from the position of C.P.R. town ticket agent at Peterboro, Ont., to that of C.P.R. city ticket agent at Hamilton, Ont.

C. B. CONGER, Treasurer, and one of the founders of the Travelling Engineers' Association, and its first President, having presided over the convention at Chicago in 1893; at Denver, Col., in 1894; at Pittsburgh, Pa., in 1895; at Minneapolis, Minn., in 1896, and Chicago in 1897, died on October 29, aged 65.

R. W. SHEPHERD, for 35 years manager of the Ottawa River Navigation Co., died suddenly in the Queen's Hotel, Montreal, Nov. 8. He entered the company's employ on leaving school, and succeeded his father as manager, from which position he retired about three years ago. H. Shepherd, a railway contractor in Alberta, is a son.

W. D. TRUMP, formerly General Superintendent, Pere Marquette Rd., has been appointed Manager, Detroit Terminal Rd., at Detroit, Mich. The Detroit Terminal is owned by the Grand Trunk, Michigan Central and Lake Shore and Michigan Southern lines. It was previously operated jointly, but is now under separate management.

P. LYALL, President of P. Lyall and Sons, Limited, Montreal, died in that city Nov. 14, aged 70. His firm built a number of office buildings, hotels, etc., for the C.P.R., the sheds for the Montreal Harbor Board, this latter involving the expenditure of about \$5,000,000, and the Fort Garry station, Winnipeg, for the Canadian Northern Ry.

J. M. MAVER, who has been appointed Contracting Agent, Northern Pacific Ry., Montreal, was born in Toronto, Aug. 9, 1884. His railway service includes eight years with G.T.R. in freight claims, division freight and General Freight Agent's offices in Montreal, and two years soliciting freight agent, Canadian Interlake Line, Montreal.

BARON FURNESS, better known as Sir Christopher Furness, who died in London, Eng., Nov. 11, was head of Furness, Withy and Co., owners of the Furness line of

steamships trading to Maritime province ports, and managers of the Manchester Liners, trading to Montreal, and was honorary President of the Richelieu and Ontario Navigation Co.

WALTER LINDLEY, who died at Hove, Eng., Oct. 22, aged 79, was intimately connected with Canada for many years as Secretary of the old Great Western Ry., and as predecessor of H. H. Norman in the Secretaryship of the G.T.R. Co. in London. Afterwards he was for many years on the directorate of the English Association of American Bond and Shareholders.

W. CORBETT, Travelling Passenger Agent, C.P.R., was on the special troop train which had a head on collision with the Toronto-Detroit express at Streetsville Jct., Ont., Oct. 28. He was on the platform between the baggage car and the first passenger car in which so many casualties occurred, and was thrown against the baggage car and pinned down, but was rescued with very slight injuries.

J. P. DALY, General Freight and Passenger Agent, Ottawa and New York Ry.

P-310
Frank W. Cooper, A.M. Can. Soc. C.E., Division Engineer, Eastern Division, Canadian Pacific Railway.

and New York and Ottawa Ry., was presented with a silver salver by the office staff, a gold signet ring by the station agents, and gold ring, locket and chain by the locomotive engineers and trainmen on the company's lines, Nov. 1, on the occasion of his transfer to Buffalo, N.Y., to another position in the New York Central and Hudson River Rd. Co.'s service.

D. M. McINTYRE, K.C., for the past 15 years city solicitor of Kingston, Ont., who has been appointed Chairman Ontario Railway and Municipal Board, was born at Kingston about 55 years ago. He was at one time an alderman of that city and mayor in 1892 and 1893. He was Vice President of the Ontario Municipal Association in 1905-6. He was an unsuccessful candidate on two occasions for the House of Commons and also on two occasions for the Ontario Legislature.

W. E. BELCHER, C.P.R. travelling grain inspector, Winnipeg, was found dead in bed in an hotel at Weyburn, Sask., which town he was visiting on business, Nov. 8. He went west as agent for the C.P.R. at

Portage la Prairie in 1880, but returned to Toronto in 1889, as freight agent for the Northern Pacific Ry., and was afterwards in that company's service in Detroit. He was father of F. P. Belcher, vessel agent, Winnipeg, and formerly connected with the Northern Navigation Co.

G. R. B. WATT, who has been appointed chief clerk, General Advertising Agent's office, Canadian Pacific Ry., Montreal, was at one time in the Highland Ry. Co.'s service at Nairn and Inverness, Scotland. He came to Canada in 1901, since when he has been consecutively, 1901 to 1905, billing clerk, freight office, C.P.R., Ottawa; 1905 to 1907, in city passenger office, Ottawa; 1907 to November, 1912, in General Advertising Agent's office, Montreal, in charge of compilation of public time tables. Entire service with C.P.R.

EDWARD MOHUN, M. Can. Soc. C.E., who died in Victoria, B.C., Oct. 23, aged 74, had resided in British Columbia since 1863. Among other works on which he was engaged were the surveys for the Wellington and Departure Bay Ry. on Vancouver island; divisional engineer on surveys for the Dominion Government projected railway routes through the Eagle and Yellowhead passes in 1871-72. From 1873 he has been principally engaged in private practise, and in 1898 entered the Provincial Government service.

J. E. PINAULT, who has been appointed Superintendent Canada and Gulf Terminal Ry., St. Flavie, Que., was born at Rimouski, Que., June 24, 1884, and was educated at Rimouski College, St. Joseph, N.B., and Chatham, Ont. He entered transportation service Dec. 1, 1900, since when he has been consecutively, Dec. 1, 1900, to Jan. 21, 1902, in track department, Intercolonial Ry.; Jan. 22, 1902, to Sept. 26, 1904, in mechanical department I.R.C.; Sept. 27, 1904, to Oct. 9, 1912, in operating department, I.R.C.; Oct. 10, 1912, appointed Superintendent Canada and Gulf Terminal Ry.

E. PENNINGTON, President, Minneapolis, St. Paul and Sault Ste. Marie Ry., is stated to be the heir to the title and estates of Baron Muncaster. There is an Irish barony created in 1783 and a United Kingdom barony of Muncaster, created in 1898. This latter title will become extinct on the death of the present holder, whose family name is Josselyn Francis Pennington. E. Pennington is reported as stating that he knows all about the matter, that his niece has visited Lord Muncaster, and that there is no doubt that he is the heir.

THE HON. FRANK COCHRANE, Minister of Railways and Canals; Sir Thos. G. Shaughnessy, President, C.P.R.; Sir Wm. Mackenzie, President, Canadian Northern Ry.; Sir Donald Mann, Vice-President, Canadian Northern Ry.; E. J. Chamberlin, President, G.T.R. and G.T.P.R.; D. McNicoll, Vice President, C.P.R., and W. Wainwright, Vice-President, G.T.R. and G.T.P.R., have been appointed honorary colonels under the provisions of the Dominion Militia Act. They will serve on an advisory transportation committee of the Militia Department.

A. E. ROSEVEAR, who has been appointed Assistant to the Vice President, Grand Trunk Ry. (traffic department), entered G.T.R. service in 1879, since when he has been consecutively: 1880 to 1885, clerk, General Superintendent's office, Montreal; 1885 to 1890, stenographer to General Manager; 1890 to 1892, accountant, G.T.R., West Shore Fast Freight Line, Chicago, Ill., and Detroit, Mich.; 1892 to 1898, accountant Reading Despatch Line, Detroit, Mich.; Oct. 1, 1898, to April, 1903, Freight Claims Agent, Montreal; April, 1903, to Oct., 1912, Assistant General Freight Agent, Montreal. Entire service with G.T.R.

That the Lemieux act, providing for the nomination of a board of conciliation to inquire into disputes between employer and employe is constitutional, and that consequently a board named to look into certain differences between the Montreal St. Ry. and a few of its employes was regularly and legally appointed, is the tenor of a judgment given in Montreal recently by Justice Lafontaine in a case which has been occupying the attention of the Superior Court off and on for the past two years. The appointment of the board was attacked by the company on the ground that the act, in virtue of which the Minister of Labor appointed the board, was unconstitutional.

G. M. WILSON, who has been appointed General Foreman Shops, G.T.R., Toronto, was born in Belfast, Ireland, Oct. 5, 1867. He was employed as a machinist on the construction of the G.T.R. St. Clair tunnel in 1889 and 1890, and was then employed by the Jenks Shipbuilding Co., Port Huron, Mich., for a short time. He entered G.T.R. service Nov. 11, 1890, as machinist at Fort Gratiot, Mich., and has since been expert machinist and machine shop foreman. He laid out and supervised the installation of the entire machinery equipment of the G.T.R.'s main shops at Battle Creek, Mich., and just prior to his present appointment supervised the installation of the power plant at the union station and at the Chateau Laurier, Ottawa.

F. W. COOPER, who has been appointed Division Engineer, Eastern Division, C.P.R., Montreal, was born at London, Ont., Feb. 16, 1880, and was educated at the London Collegiate Institute and the School of Applied Science, McGill University, Montreal. He entered railway service in 1901, since when he has been consecutively, 1901 to 1903, on preliminary location, construction and office work with the Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; 1903 to 1904, transitman C.P.R., London, Ont.; Jan., 1904, to Oct., 1905, Assistant Resident Engineer C.P.R., Toronto; Oct., 1905, to Feb. 1908, Resident Engineer, C.P.R., London, Ont.; Feb., 1908, to Dec., 1909, Resident Engineer, C.P.R., Toronto, Ont.; Dec., 1909, to Nov., 1911, Resident Engineer, C.P.R., London, Ont.; Nov., 1911, to March, 1912, Resident Engineer, C.P.R., Montreal; March, 1912, to Nov., 1912, Assistant Engineer, Maintenance of Way Department, C.P.R., Montreal.

C. A. DUNHAM, who has been appointed Signal Engineer, Grand Trunk Ry., was born in Hamilton, Ont., Oct. 20, 1866. He was educated in Ontario public schools, at night schools in Chicago, and by correspondence courses in engineering. He entered railway service in 1894, since when he has been consecutively:—1884 to April, 1886, helper, mechanical department, Chicago, Burlington and Quincy Rd., Chicago, Ill.; April, 1886, to 1887, in bridge department, New York, Chicago and St. Louis Rd.; in 1887 for three months with U.S. Rolling Stock Co., Hegewisch, Ill.; Sept., 1887, to Jan., 1890, with Grant Bros., railway contractors; Jan., 1890, to Sept., 1892, locomotive fireman and brakeman, Chicago, Burlington and Quincy Rd.; Sept., 1892, to March, 1896, with Union Switch and Signal Co., and National Switch and Signal Co.; March, 1896, to 1899, Inspector of Signals, Illinois Central Rd.; 1899 to June, 1905, Signal Engineer, Illinois Central Rd.; June, 1905, to Nov., 1912, Signal Engineer, Great Northern Ry.

HENRY IRWIN, B.A., M. Can. Soc. C. E., L.C.E., D.L.S., Q.L.S., who has been appointed Consulting Right of Way and Lease Agent C.P.R., Montreal, was born at Newgrove, county Down, Ireland, Oct. 27, 1847. He was educated at private schools until

1863, at the Royal school, Dungannon from 1863 to 1866, and from 1866 to 1871 at Trinity College, Dublin, where he graduated in arts and in civil engineering, being second in his class and obtaining honors in two divisions. His subsequent career follows:—1872 to 1874, assistant to county engineer of Antrim; 1874 to 1887 with J. Nielle, Q.L.S., Montreal, rising from chairman to principal assistant and manager; 1886, became a Dominion Land Surveyor and Quebec Land Surveyor; 1887 to Feb. 1, 1904, Assistant Engineer and Provincial Land Surveyor, Canadian Pacific Ry.; Feb. 1, 1904, to Oct. 31, 1912, Right of Way and Lease Agent. In 1890 he won the Pennsylvania University's prize of \$400 for essay on construction and maintenance of macadamized roads in an open competition.

Motor Service, Limited, is being organized, according to press reports, in Montreal, with a capital of \$500,000, to make a specialty of handling freight in the city by motor truck. D. McDonald, formerly General Manager, Montreal Tramways Co., and M. J. Kennedy, formerly General Freight Agent, Montreal Tramways Co., are said to be interested in the new company.

Railway Manager Wanted for New Zealand—Applications are invited for the position of General Manager of the New Zealand Government Railways. Salary £3,000 a year; term of appointment five years; passage of appointed candidate and family paid. Candidates must be well versed in operating a railway system in all its branches, particularly in passenger and goods traffic. Further particulars and forms of application may be obtained from the High Commissioner for New Zealand, 13 Victoria street, London, S.W., Eng.

Protection for Car Repairers.—The Board of Railway Commissioners has issued a circular stating that its attention has been called to several accidents which have recently taken place wherein car repairers have met with serious injury while working on repair tracks, and that all railway companies subject to the Board's jurisdiction will at the sittings to be held in Ottawa on Dec. 3 be called upon to speak to the question of providing more efficient protection to car repairers working on repair tracks. The companies are asked to be prepared with suggestions and for a general discussion of the question.

National Transcontinental Ry. Operation.—The portion of the eastern section from Moncton to Edmundston, N.B., which has been completed, not having been applied for by the Grand Trunk Pacific Ry., for operating purposes, the N.T.R. Commission started a service on it Nov. 20. Trains leave Moncton Mondays, Wednesdays and Fridays at 7 a.m., arriving at Edmundston at 7 p.m. The return trips are made on Tuesdays, Thursdays and Saturdays leaving Edmundston at 7 a.m., and arriving at Moncton at 7 p.m. W. B. Cronk, heretofore Superintendent of Transportation at Winnipeg, has been appointed General Superintendent in charge of operation, with office at Ottawa. E. P. Cronk has been appointed Superintendent at Edmundston.

Securing of Trucks to Car Bodies. The Board of Railway Commissioners has issued a circular stating that its officers are of the opinion that the number of persons killed and injured in accidents due to derailments, head on and rear end collisions, would be very much reduced, if the trucks of the cars were so attached to the body that the body could not leave the truck in case of such accidents. The Board asks railway companies to give the matter serious consideration, so that, when it is spoken to at an early sitting, a decision can be arrived at.

It is rumored that the Grand Trunk Ry. is contemplating such an installation on the branch between Galt and Elmira, Ont., for which purpose the tests on the Schomberg and Aurora Ry. prove that the car is well adapted.

Premiums for Maintenance of Way.—The Pennsylvania Rd. made its annual award recently of \$5,400 in premiums for the maintenance of sections of roadbed in the best condition during the past year. To insure the premiums being awarded upon accurate data, a committee of maintenance of way officers went over the line every month during the year in a car attached to one of the regular high speed trains. This special committee was composed of the Chief Engineer of Maintenance of Way as Chairman, the Engineer of Maintenance of Way, the Assistant to the General Manager, and the superintendents of the Manhattan and Central divisions. The first premium was \$1,200, of which \$800 went to the supervisor and \$400 to the assistant supervisor having the best line and surface between New York and Pittsburgh and Philadelphia and Washington. The other prizes were four premiums of \$800 each, \$600 for the supervisor and \$200 for the assistant, for the best line and surface on a main line superintendent's division between New York and Pittsburgh and Philadelphia and Washington. A special improvement premium of \$1,000, \$700 to the supervisor and \$300 to the assistant, was given for the greatest improvement made in line and surface on the main line between New York and Pittsburgh and Philadelphia and Washington.

The shippers' section of the Saskatoon, Sask., board of trade has decided to appoint a traffic officer.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. is said to have ordered 65,000 tons of steel rails.

The Canadian Northern Telegraph Co. has opened offices at Decker, Grays, and Grosse Isle, Man., and at Macrorie and St. Gregor, Sask.

The C.P.R. freight traffic department moved into its new quarters at the enlarged Windsor street station, Montreal, Nov. 9.

G. Marconi, inventor of wireless telegraphy, has lost an eye as the result of a motor accident, and it is stated that the sight of the other is also threatened.

The new combined land rates for wireless telegraph messages which were decided upon during the national wireless conference in June, are to be put in effect in Canada by the C.P.R. Telegraphs and the G.N.W. Telegraph Co., Dec. 1.

Moncton press despatches state that the divisional system of accounting has been adopted on the Intercolonial Ry., and that the officials in charge are:—Truro, N.S., — Hallisey; New Glasgow, N.S., E. B. Hagarty; Campbellton, N.B., F. J. King; Levis, Que., — Belanger.

The total delay by troubles in electrical apparatus last year on the 33 electric locomotives operating in the New York terminal district of the Pennsylvania Rd. amounted to only 13 minutes. The total mileage run of these locomotives was 900,000, including a mileage of 56,000 for a single one of them.

The International Brotherhood of Railway Maintenance of Way Employees has decided to hold its bi annual convention in Winnipeg, in Nov., 1914. The officers for the current year include:—H. Irwin, Portage la Prairie, Man., Vice President; W. H. Noyse, Toronto, and G. Seal, Portage la Prairie, members of the executive committee.

Railway Rolling Stock Notes.

The Dominion Coal Co. has ordered 50 fifteen ton wood hopper cars from the Canadian Car & Foundry Co.

The Quebec Oriental Ry. has ordered a snow plow from the Canadian Car and Foundry Co.

The Grand Trunk Pacific Ry. has ordered 10 second class cars from the Canadian Car and Foundry Co.

The Grand Trunk Pacific Ry. has received 3 consolidation locomotives from the Canadian Locomotive Co.

The Canadian Northern Ry. has ordered 650 box cars, 60,000 capacity, from the Canadian Car and Foundry Co.

The Crossen Car Co., between Oct. 13 and Nov. 13, delivered 60 box cars, 60,000 lbs. capacity, to the Canadian Northern Ry.

The Intercolonial Ry. has ordered the following rolling stock:—100 wooden box cars, 60,000 lbs. capacity, from Nova Scotia Car Works; 1 snow plow from Wendell and McDuffie.

The G.T.R. has received the following additions to rolling stock:—62 refrigerator cars, 456 box cars, from Canadian Car and Foundry Co.; 5 box cars, 153 automobile cars, from Western Steel Car and Foundry Co.

The Kootenay and Alberta Ry. has bought a locomotive and a second hand passenger and baggage car from the C.P.R. This is the only rolling stock it will require, as the coal cars for the traffic from the mines will be furnished by the C.P.R.

The British Columbia Electric Ry. has ordered from the Hart-Otis Car Co. six all steel Otis type cars, similar to those supplied last year, the approximate dimensions over all being:—Length, 28 ft.; height, 8 ft. 4½ ins.; capacity, 750 cu. ft.

The C.P.R., between Oct. 14 and Nov. 14, ordered the following rolling stock—2 colonist cars, 1 second class car, 4 freight refrigerator cars, 14 stock cars, 8 vans and 66 flat cars, to be built at its Angus shops, Montreal; 13 dining cars from the Pullman Co.

The C.P.R., between Oct. 14 and Nov. 14, received the following rolling stock—1 P1 locomotive, 7 W3 locomotives, 2 D4 locomotives, 8 baggage and express cars, 3 first class cars, 2 suburban cars, 44 vans, 39 flat cars, 659 box cars, from its Angus shops, Montreal; 472 box cars, from Canadian Car and Foundry Co.; 28 N3 locomotives from Montreal Locomotive Works; 25 D10 locomotives from American Locomotive Co.; 657 box cars from Standard Steel Car Co.; 930 box cars from Western Steel Car and Foundry Co.

The Canadian Car and Foundry Co. made the following deliveries between Oct. 15 and Nov. 15:—Canadian Northern Ry., 6 first class cars, 67 thirty ton box cars, Canadian Pacific Ry., 312 steel frame 40 ton box cars without woodwork, 725 steel frame 40 ton box cars complete, Grand Trunk Ry., 419 thirty ton steel underframe box cars, 70 thirty ton refrigerator cars, International Ry. of New Brunswick, 20 logging cars, Timiskaming and Northern Ontario Ry., 4 steel underframe cars, Canadian Steel Foundries, 6 core oven cars, Montreal Tramways Co., 3 steel electric car bodies.

The Minneapolis, St. Paul and Sault St. Marie Ry. is said to have ordered 10 mikado freight locomotives from the American Locomotive Co. They will be equipped with superheaters.

The Duluth, South Shore and Atlantic has ordered 400 ore cars from the American Car and Foundry Co.

Stoppage of Grand Trunk Construction in New England

It was officially announced by G.T.R. officials in Montreal, Nov. 10, that work on the extensions of the Central Vermont Ry. into Boston, Mass., and to Providence, R.I., which are being built by the Southern New England Ry., have been temporarily suspended, owing to the unsettled condition of the British money market. The contractors on the line being built from Palmer, Mass., southeasterly to Providence, on which about \$1,500,000 has already been spent, ceased work on Nov. 10, and about 2,300 men were thrown out of employment. It was expected to have had this extension completed by the end of 1913, and the extension into Boston completed in the following year.

Press reports from Boston state that negotiations are in progress with the New York, New Haven and Hartford Rd. for such rights as will enable the G.T.R. and Central Vermont Ry. to reach Boston and Providence over that company's lines. Vice President Bryans, of the N.Y., N.H. and H. Rd., is reported as stating that an agreement has been reached for the joint use of the C.V.R. tracks between Windsor and White River Jct., Vt., and that the Boston and Maine Rd., a subsidiary of the N.Y., N.H. and H. Rd., had withdrawn its petition for the building of a line from Claremont to Lebanon, N.H., paralleling the C.V.R. He further stated that no other agreement had been made, although negotiations for a general traffic agreement had been going on all summer. These negotiations, President Mellen is reported as stating, if completed, would give the G.T.R. and its subsidiary, the C.V.R., access to all N.Y., N.H. and H. Rd. points, and the latter line access to the C.V.R. and G.T.R. lines.

An official statement was made by E. J. Chamberlin, President, G.T.R., Nov. 13, to the effect that there is no change in the C.V.R. policy relative to the New England connections. The negotiations as to traffic arrangements have not progressed far enough to determine whether such arrangements can be made as would be satisfactory to all parties interested. Should any arrangements be finally agreed to they will be such as will fully protect the interests of all friends of the G.T.R. in New England. It was subsequently stated that a tentative agreement had been made for such a traffic agreement, and that it was to run for 25 years.

The press reports state also that the agreement provides that the extensions to Providence and Boston are to be stopped and eventually abandoned. The attention of the United States Attorney General has been called to the matter, and it is stated that proceedings may be taken to prevent any such agreement being entered into on the ground that it would be a restraint of trade. The official notifications that such an enquiry would be held were served Nov. 19, and the investigation will take place at Washington.

It was further reported in Boston, Nov. 12, that the stoppage of work was brought about without any consultation with C.V.R. officials, and that as a result the resignation of E. H. Fitzhugh, President, might be expected. Subsequently Mr. Fitzhugh stated that there was no foundation for this statement.

A bill has been filed with the clerk of the Legislature of the State of Massachusetts providing for the purchase by the Commonwealth of the Boston and Maine Rd. lines.

Telephone Train Dispatching on the Grand Trunk Pacific Railway.

We are officially advised that the G.T.P.R. is erecting wires for telephone service on the following divisions:—

Division	Miles.
Lake Superior Division—	
Fort William to Superior Jct.	200
Prairie Division—	
Winnipeg to Melville	285
Melville to Regina	100
Mountain Division—	
Edmonton to Tete Jaune	310
Prince Rupert to Hazelton	180
Alberta coal branch	65

1,140

Of the above 555 miles is in operation and the additional 585 miles is expected to be complete and available for service by Jan. 1. The apparatus adopted as standard is the Northern Electric 102B selector set and the swinging type transmitter arm, manufactured by the Northern Electric & Mfg. Co., Montreal.

On the Lake Superior division, Fort William to Graham, Ont., the dispatcher will be located at Graham. Fourteen stations will be equipped to start with, and all trains will be supplied with portable train sets and line poles.

A complete telephone service, operated by ordinary telephone methods and instruments, has been installed on the following branch lines:

Branch Line	Miles.
Melville-Canora	55
Regina-Boundary	85
Regina-Moose Jaw	40
Young-Prince Albert	75
Oban-Battleford	50
Tofield-Calgary	175

480

A. B. Smith, Manager of Telegraphs, G.T.P.R., is in charge of the work.

Mechanical Conventions at Atlantic City.—The American Railway Master Mechanics' Association will meet at Atlantic City, N.J., June 11 to 13 next, and the Master Car Builders' Association will meet there June 16 to 18.

SEALED TENDERS addressed to the undersigned and marked on the envelope "Tender for Cape Croker Timber," will be received until noon on Thursday, the 5th day of December next, for four hundred thousand feet of timber comprising Maple, Beech, Elm, Basswood, Ash, and Hemlock, being about 50 per cent. Maple, 20 per cent. Basswood, 12 per cent. Beech, 10 per cent. Elm and 8 per cent. Ash and Hemlock, which the Indians of Cape Croker are to take out during the ensuing winter and deliver on the shore of Lake Huron at convenient points for shipment.

Tenderers should state the prices they will pay for the different kinds of timber per M. feet, B. M., over and above Crown dues, as stated hereunder.

An accepted cheque on any Canadian Chartered Bank for \$400.00, made payable to the order of the undersigned, should accompany each tender, which in the event of failure to carry out the undertaking will be forfeited to the Department.

The highest or any tender will not necessarily be accepted, and cheques sent by unsuccessful tenderers will be returned.

Reasonable advances should be made to the Indians as the work progresses, if required, and sworn returns of measurements must be made by an Ontario licensed surveyor.

Any further information desired can be obtained on application to Mr. A. J. Duncan, Indian Agent, Cape Croker, or to the undersigned.

The Crown dues payable to the Department on this timber are as follows:—

Maple and Elm \$4.00 per M. ft. B.M.
Beech and Basswood \$3.00 per M. ft. B.M.
Hemlock \$1.00 and Ash, \$2.00 per M. ft. B.M.

The unauthorized publication of this advertisement will not be paid for.

J. D. McLEAN,

Asst. Deputy and Secretary

Relations of Railway Employees to Public.

George Bury, Vice President and General
Manager, Western Lines, C.P.R., has issued
the following circular to employees:—

The manager of a baseball club at the
height of his career conceived the idea of
securing a team made up of players from
other clubs who had made the highest in-
dividual average in their respective posi-
tions. He secured them at great cost. As
a playing organization it was a failure, from
an absence of team work, each player look-
ing solely to his own average. It takes
good team work to produce results on a rail-
way as it does in a ball club. Good team
work is necessary if we are to hold our
present traffic and attract an increasing
volume to the road. We can only do so
by efficiency and by satisfying the shipping
and travelling public.

If there is one unfortunate habit that men
in railway service lapse into, it is that of
dismissing responsibility by feeling that it
belongs to someone else. We cannot obtain
results by minimizing the importance of
complaints and dismissing them by simply
relegating them to some other branch of
the service or placing the responsibility on
some junior and letting it end there. Every-
one connected with our service is expected
to use his best efforts in the harmonious
working of the system, and co-operate with
those surrounding him, considering himself
part of the machinery of our organization
and endeavoring to increase its effectiveness
every way in his power.

Agents, ticket clerks, conductors, baggage-
men, checkers, passenger trainmen, and all
others whose duties bring them into close
touch with the public, by painstaking and
uniform courtesy cannot fail to create a
favorable impression. Due to the wonder-
ful growth of our country, a large percent-
age of the people on our trains are unused
to travel, having come from foreign lands
to seek home in the west, frequently with
small means. Little attentions paid to these
people and others will come back in many
ways. A kind word and a little extra at-
tention will soon establish a lasting im-
pression.

In most places the company's agent is its
sole representative in the town where he is
located. The estimate put upon the agent
by his fellow citizens is the measure of the
company's standing in that district. Agents
and those who represent the company in
various capacities should strive to be a part
of the community in which they live, on
good terms with their fellow townsmen
and sharing the feelings of those with whom
they are doing business, making represen-
tations which will enable us to meet the
wishes of the public, on whom the company's
success depends.

Try not to keep people waiting who have
business to transact. Make them feel they
are welcome and that their business is your
concern.

Every employe has certain responsibilities
and a sphere of usefulness, and we should all
work with the one end in view of making
our service such that we will hold and at-
tract patrons.

Railway Finance, Meetings, Etc.

Alberta Railway and Irrigation Co.—Fol-
lowing are the directors and officers elected
for the current year:—President, Sir Thos.
G. Shaughnessy; Vice-President, G. Bury;
other directors, A. R. Creelman, D. McNicoll,
L. G. Ogden; Secretary, H. C. Oswald.

Chicago Great Western Rd.—E. J. Cham-
berlin, President, G.T.R., is reported as
stating that the company has not even
thought of acquiring the C.G.W. Rd., which

recent press reports stated had been pur-
chased in order that a connection might be
made between the G.T.R. at Chicago and
the G.T. Pacific Ry.

Dominion Atlantic Ry.—Approximate pas-
senger earnings for October, \$48,006.03;
freight earnings, \$77,774.97; total earnings,
\$125,781, against \$169,600 total earnings for
October, 1911.

**Edmonton, Dunvegan and British Colum-
bia Ry.**—A prospectus was issued by
Lloyds Bank, Ltd., in London, Eng.,
recently, offering at 94½ £700,000, the
mortgage debenture stock of the E.D. &
B.C. R. Co., the principal and interest being
unconditionally guaranteed by the province
of Alberta, the stock being part of an issue
of \$7,000,000 authorized to be made, which
represents a bonded indebtedness at the
rate of \$20,000 a mile.

Grand Trunk Pacific Branch Lines Co.—
There has been deposited with the Secre-
tary of State at Ottawa a trust deed made
between the G.T.P.B.L. Co., the National
Trust Co., and the Province of Alberta
securing an issue of 4% sterling bonds
guaranteed by the province.

Grand Trunk Ry.—Application is being
made to the Dominion Parliament for
authority to issue a further amount of
£200,000 of G.T. consolidated debenture
stock.

Blair & Co., New York, are offering
\$3,360,000 4½% equipment notes, series B,
dated Nov. 1, 1912, due semi-annually be-
ginning May 1, 1913. These notes are issued
in part payment for 100 locomotives, 2,000
box cars and 50 tank cars.

Great Northern Ry.—The report for the
year ended June 30 shows net earnings of
\$28,535,271, against \$23,657,241 in 1911.
There was a balance available for dividends
of \$21,654,255, equal to 10.31% earned on
the capital stock, as compared with 8.34%
earned last year.

Pere Marquette Rd.—An appeal is being
made against the recent decision of the
United States district court authorizing the
issue of \$3,500,000 of receivers' certificates.

Temiscouata Ry.—The annual meeting of
shareholders and registered bondholders was
held at Quebec recently. The accounts and
General Manager's report for year ended
June 30 were submitted. The net earnings
showed an increase over the preceding year
and operating expenses a decrease. After
meeting fixed charges, interest and redemp-
tion fund for prior lien bonds, a dividend
was declared on the consolidated mortgage
income bonds and an appropriation provided
for betterments to the property.

Following are the directors and officers
for the current year:—President, J. H.
Walsh; Vice-President, E. O. Grundy; other
directors, A. H. Cook, K.C.; F. Murphy,
K.C.; A. Laurie and W. N. Campbell; Sec-
retary and General Manager, G. G. Grundy.

Railway Lands Patented.—Letters patent
were issued during September covering rail-
way lands in Manitoba, Saskatchewan,
Alberta, British Columbia and Yukon for
the following number of acres:

Calgary and Edmonton Ry. Co.	1,121.00
Canadian Northern Ry. Co.	3,129.25
Canadian Pacific Ry. Co., grants	133.20
Qu'Appelle, Long Lake and Saskatch- ewan Rd. and Steamboat Co.	3,048.91

7,432.36

Norton Griffiths Dredging Co., Ltd., has
been incorporated under the Dominion Com-
panies Act, with \$1,250,000 capital, and
office at Montreal, to carry out general
dredging and contracting work in Canadian
rivers and harbors, and to develop water-
way systems. The chief work which the
company will undertake for the present is
in connection with the large development
works in Courtenay bay, St. John, N.B.

Grand Trunk Railway's Semi-Annual Meeting.

The semi annual meeting was held in London, Eng., Oct. 24, when the report for the half year ended June 30 was presented as follows:—The following summary shows a comparison of the half year's revenue account with that of the half year ended June 30, 1911:—

1911.		1912.	
£3,561,182	Gross Receipts.....	£3,834,328	1 9
2,628,205	Working expenses, being at the rate of 72.85%, as compared with 73.81% in 1911.....	2,793,285	19 0
932,977	Net traffic receipts ..	1,041,042	2 9
Cr.		Dr.	
22,431	Balance of income from rentals, outside operations, and car mileage ..	33,504	9 5
995,408	Total net revenue....	1,007,537	13 4
16,013	Amount received from International Bridge Co ..	16,012	16 7
6,507	Interest on bonds Central Vermont Ry.....	6,506	14 3
62,510	Interest on securities of controlled lines and on St. Clair tunnel bonds acquired by issue of G. T. 4% debenture stock ..	70,775	16 9
51,937	Balance of general interest account ..	51,232	2 7
£1,092,375	Net revenue receipts ..	£1,152,065	3 6

Following are the net revenue charges for the half-year, compared with the corresponding period:

1911.		1912.	
£ 77,603	Rents, leased lines.....	£ 77,603	0 9
539,850	Interest on debenture stocks and bonds of the company.....	571,641	16 0
30,481	Interest on debenture stock and bonds of lines consolidated with the G.T. Co.....	9,230	2 10
41,758	Canada Atlantic Ry. deficiency.....	52,805	7 3
39,686	Detroit, Grand Haven and Milwaukee Ry. deficiency ..	50,680	7 8
£ 729,378		£761,960	14 6
362,997	Leaving a surplus of ..	390,104	9 0
£1,092,375		£1,152,065	3 6

Adding the balance of £6,830 18s. 7d. at credit of net revenue account on Dec. 31, 1911, to the above surplus for the past half year, the total amount available for dividend is £396,935 7s. 7d., from which the directors recommend the payment of the following dividends, viz.:—

Half-year on 4% guaranteed stock...	£230,775	18 1
Half-year on first preference stock...	85,420	15 0
Half-year on second preference stock...	63,210	0 4
	£388,406	13 5

leaving a balance of £8,528 14s. 2d. to be carried forward to next half year's account.

Following is a comparison of receipts for the half years ended June 30, 1912 and 1911:—

Description of Receipts	1912	1911	Increase
Passengers	1,035,756	941,570	94,186
Mails and express	102,240	151,656	55,503
Freight and live stock	2,496,260	2,347,394	148,246
Other receipts	140,123	112,002	28,121
	3,834,328	3,561,182	273,146
Passengers carried	5,530,072	5,170,916	359,156
Average fare per passenger	44.95d.	43.84d.	1.11d.
Tons freight and live stock	9,388,829	9,050,269	338,560
Average rate per ton	63.81d.	62.26d.	1.55d.
Tons carried one mile	1,779,753.53	1,635,756.584	123,996.551
Earnings per train-mile	89.75d.	82.33d.	7.42d.

The average rate per ton per mile on the entire freight business was 0.68 of a cent, compared with 0.69 of a cent in the corresponding half year.

The working expenses, excluding taxes, were £2,748,575, or 71.68% of the gross receipts, compared with £2,580,641, or 72.47%; an increase in amount, but a decrease in the proportion to the gross receipts of 0.79%.

Following is a comparison of revenue expenditure, including taxes, for the half years ended June 30, 1912 and 1911:—

	1912	1911	Increase	Decrease
Maintenance of way and structures	347,450	395,713	£ 48,263	
Maintenance of equipment	605,637	600,415	5,222	
Traffic expenses	118,049	114,947	3,102	
Conducting transportation	1,368,289	1,373,042	4,753	
General Expenses	109,149	96,924	12,225	
Taxes	44,711	47,546	2,835	
Total	£2,793,285	£2,628,205	£165,080	
Percentage of gross receipts	72.85	73.81	0.96	
Expenditure per train-mile	65.38d.	60.76d.	4.62d.	

The train mileage compares with that for the half year ended June 30, 1911, as follows:—

	1912	1911	Increase	Decrease
Passenger	4,395,917	4,233,413	162,504	269,110
Freight	5,601,582	5,870,692	269,110	20,994
Mixed trains	235,907	276,901	40,994	
Total	10,233,405	10,381,006	147,601	127,600

The gross receipts for the half year show an increase of £273,146, or 7.67%; the working expenses, including taxes, an increase of £165,080, or 6.28%; and the train mileage a decrease of 127,600, or 1.23%.

The total charges to capital account for the half year were £998,582 15s. 7d. Of this £216,438 7s. 2d. was for the acquisition of Ottawa Terminal Ry. first mortgage bonds. £94,912 8s. 1d. for the acquisition of Lachine, Jacques Cartier and Maisonneuve Ry. bonds, and £80,970 17s. 1d. for discount and commission on 4% debenture stock and 4% guaranteed stock sold during the half year.

The expenditure on capital account in respect of new works, new rolling stock and land purchased was as follows:—

	£	s.	d.
New works	85,934	4	0
New rolling stock	651	7	5
Land purchased	519,675	11	10
	£606,261	3	3

No additions to rolling stock at the expense of capital were made during the half year. Three engines were sold; 7 Pacific type passenger engines, 5 first class cars, 5 baggage cars, and 1 snowplough were built in the company's shops, and 20 switch engines, 44 first class cars, 23 baggage cars, and 74 steel underframe box cars were purchased on revenue account.

CANADA ATLANTIC RAILWAY.

The following are the results of the half year's working of the Canada Atlantic Ry. compared with corresponding period of 1911:—

1911.		1912.	
£205,069	Gross receipts	£222,441	
188,098	Working expenses	208,671	
16,971	Net traffic receipts	13,770	
7,025	Balance of income from rentals,		

outside operations and car mileage..... Dr. 821

£ 23,996 Total net revenue..... £ 12,949

The interest charges for the half year were £65,754, against £65,753, so that there was a net revenue deficiency of £52,805, compared with £41,757 in 1911. The number of passengers carried was against 833,704 in 1911, an increase, of and the passenger receipts, including mails and express receipts, were £46,267, against £44,185, an increase of 4.71%. The quantity of freight moved was 876,250 tons, against 833,704 in 1911, an increase, or 5.10%; the receipts from freight traffic were £156,948, against £144,928, an increase of 8.29%.

GRAND TRUNK WESTERN RAILWAY.

Following are the results of the half year's working compared with corresponding period of 1911:—

1911.		1912.	
£ 661,759	Gross receipts	£ 661,834	
549,482	Working expenses	547,993	
112,277	Net traffic receipts	113,841	
Dr. 53,263	Balance of income from rentals, outside operations and car mileage....	Dr. 50,319	
£ 59,014	Total net revenue....	£ 63,522	

The net revenue charges for the half year were £92,187, so that there was a net revenue deficiency for the half year of £28,665, and deducting therefrom the credit balance at Dec. 31, 1911, of £12,521, there remains a net revenue debit of £16,144 at June 30, which amount is carried forward to the current year. The number of passengers carried was 986,012, against 995,116, a decrease of 0.91%; and the passenger train receipts, including mails and express, were £214,306, against £202,176, an increase of 6%. The quantity of freight moved was 1,823,508 tons, against 1,941,374, a decrease of 6.07%, and the receipts from this traffic were £429,610, against £444,898 in 1911, a decrease of 3.44%.

DETROIT, GRAND HAVEN AND MILWAUKEE RAILWAY.

Following are the results of the half year's working of the Detroit, Grand Haven and Milwaukee Ry., compared with corresponding period of 1911:—

1911.		1912.	
£ 205,050	Gross receipts	£ 214,957	
189,230	Working expenses	206,723	
15,820	Net traffic receipts.....	8,234	
Dr. 18,524	Balance of income from rentals, outside operations, and car mileage....	Dr. 21,933	
Dr. £2,704	Total net revenue.....	Dr. £13,696	

The net revenue charges for the half year were £36,981, against the same amount in 1911, so that there was a net revenue deficiency of £50,680, as compared with £39,685 for the corresponding period of 1911. The number of passengers carried was 383,248, against 373,757, an increase of 2.54%; and the passenger receipts, including mails and express, were £59,502, against £55,511, an increase of 7.19%. The quantity of freight moved was 1,201,323 tons, against 1,192,105 in 1911, an increase of 0.77%; and the receipts from freight traffic were £134,525, against £129,825 in 1911, an increase of 3.62%.

GRAND TRUNK PACIFIC RAILWAY.

As was expected at the date of the last report, the line has been laid to Tete Jaune Cache, 60 miles west of the summit in the Yellowhead pass, on the western slope of the Rocky mountains, and 1,100 miles west of Winnipeg. It is hoped that grading will be completed to the second crossing of the Fraser river, a further distance of 120 miles, before the end of the year. From Prince Rupert, on the Pacific coast, the line has been laid eastward as far as South Hazel-

ton, 180 miles, and it is expected to complete the line to the Bulkley summit, 275 miles from Prince Rupert, next spring. There is still a deficiency of labor on all work under construction.

REPORTS OF OFFICIALS.

The Chief Engineer, H. R. Safford, reports that the expenditure for maintenance of the property was \$234,822.33 less than for the corresponding period in 1911.

The Superintendent of Motive Power, W. D. Robb, reports expenditure, mileage, etc., as follows:—

Half-year ended	Total Expenditure	Train Mileage	Rate of Expense per Mile		
			Train	Engine	Car
			Cents	Cents	Cents
June, 1912	\$5,403,368	\$10,253,406	52.70	38.61	3.28
June, 1911	4,894,198	10,132,184	48.30	35.99	3.04

An increase in expenditure of \$509,170, or 10.40%, compared with an increase in train mileage of 121,222, or 1.20%.

	Passenger Trains	Freight Trains	Mixed Trains
Average number of cars moved per train	4.8	25.3	6.8
And for corresponding period	4.7	24.6	6.9

During the half year 3 engines were sold, and 3 scrapped, leaving at the end of the half year 2 old light capacity engines set aside to be scrapped. Seven Pacific type passenger engines were constructed at the company's works, Montreal, and 20 switch engines were purchased and put into service during the half year. The actual stock at June 30 was 992 engines, against the official figure of 803.

The comparative cost of repairs per train, engine and car mile is given at the head of the next column.

A. W. Smithers, Chairman of the Board, who presided at the meeting, paid a warm tribute to the late C. M. Hays, and showed how the property had improved under his management. He referred to his visit to Canada during the past summer, to the excellent crop results, and to the want of labor for construction on the G.T.P.R. He

Cost per Mile	All repairing charges, including shop machinery, tools, marine equipment, &c.			Cost per mile	Total miles run by cars			Total cost of repairs and renewals	Half-year ended
	1912	1911			Total	Freight	Passenger		
	Cents	Cents							
Train	14.08	11.48						\$1,542,086	June, 1912
Engine	10.32	8.79						1,632,423	June, 1911
Car	0.88	0.72							

The Superintendent Car Department, J. Coleman, reports expenditure, mileage, etc., as follows:

hoped on Jan. 1 next to commence the weekly publication of earnings on the prairie sections of the G.T.P.R. and on the Lake Superior branch, and he hoped that the earnings would show up in quite a satisfactory manner.

In referring to the changes consequent on Mr. Hays' death, Mr. Smithers said:—I visited Canada in May last to make new arrangements, and was fortunate in inducing Mr. Chamberlin to become his successor. Mr. Chamberlin had been Vice President and General Manager of the G.T. Pacific Ry. since 1908. He has had a life long experience in railway work, especially construction, and is well acquainted with the G.T. system. He recommended the appointment of Mr. Donaldson as his successor as Vice President and General Manager of the G.T. Pacific. Mr. Donaldson has been in charge of the Ottawa division of the G.T.R. for some years, with headquarters at Ottawa, and is now in charge of the G.T. Pacific, with headquarters at Winnipeg. Mr. Kelley is now Mr. Chamberlin's right hand man on the G.T. system as Vice President in charge of transportation, maintenance and construction. He was Chief Engineer of the company until last year, and I have every confidence that Mr. Chamberlin will find in him a valuable assistant. When all these arrangements were being made I received valuable assistance from Vice President Wainwright, who has served the company faithfully for 50 years, and who at my request acted as President in the interim caused by Mr. Hays' death, and I have great pleasure in thus acknowledging to you, and thanking him for his long and faithful service.

The American Railway Association's executive committee has appointed a commission to investigate and punish cases of misuse of freight cars which was provided for in per diem rule 19, adopted at the meeting in New York last May. This commission may impose fines at its discretion, the minimum being \$2 for each wrongful diversion; the intent of the rule being, evidently, that the commission shall make examples of persistent misuse by one road of the cars of another.

The Cumberland Ry. and Coal Co. has been ordered by the Board of Railway Commissioners to equip its cars with automatic couplers and air brakes within 18 months.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$1,829,700	\$1,335,100	\$494,600	\$133,000
Aug.	1,745,800	1,375,000	370,800	56,100
Sept.	1,671,500	1,248,000	423,500	4,100
	\$5,247,000	\$3,958,100	\$1,288,900	\$193,200
Incr.	\$ 774,100	\$ 580,900	\$193,200	

Approximate earnings for Oct., \$2,351,200, against \$2,028,900 for Oct., 1911.

The mileage in operation during Sept. was 4,297, against 3,716 in Sept., 1911.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$12,052,398.58	\$7,604,221.68	\$4,448,176.90	\$745,148.57
Aug.	12,251,715.87	7,533,790.21	4,717,925.66	642,354.65
Sept.	11,579,733.98	7,329,430.13	4,250,303.85	332,857.05
	\$35,883,848.43	22,467,442.02	\$13,416,406.41	\$1,720,306.27
Inc.	5,751,040.9	4,030,680.63	1,720,359.27	

Approximate earnings for Oct., \$12,960,000, against \$11,113,000 for Oct., 1911.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Sept., as compared with those for Sept., 1911:—

Grand Trunk Railway.			
	1912.	1911.	
Earnings	\$3,706,800	\$3,458,600	
Expenses	2,607,600	2,476,200	
Net earnings	\$1,099,200	\$ 982,400	
Canada Atlantic Railway.			
	1912.	1911.	
Earnings	\$ 217,900	\$ 184,400	
Expenses	202,700	156,700	
Net earnings	\$ 15,200	\$ 27,700	
Grand Trunk Western Railway.			
	1912.	1911.	
Earnings	\$ 613,000	\$ 560,000	
Expenses	478,300	431,600	
Net earnings	\$ 134,700	\$ 128,400	
Detroit, Grand Haven and Milwaukee Railway.			
	1912.	1911.	
Earnings	\$ 221,600	\$ 206,500	
Expenses	211,400	149,500	
Net earnings	\$ 10,200	\$ 57,000	

Approximate earnings for Oct., \$4,901,954, and for week ended Nov. 7, \$1,061,984, against \$4,468,718 and \$956,818 for same periods, 1911.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to October 31:—

	1912	1911	Increase
G.T.R.	\$15,133,376	13,793,485	1,339,891
C.A.R.	855,466	757,544	97,922
G.T.W.R.	2,436,762	2,265,116	161,646
D.G.H. & M.R.	853,914	799,003	54,911
Totals	19,269,518	17,615,148	1,654,370

Key Harbor Coal and Ore Shipments. The Canadian Ontario Ry. has started to take in coal at Key Harbor, Georgian bay, which is 220 miles north of Toronto, at the end of a six mile branch from the Toronto-Sudbury line. Only about 10,000 tons will be taken in this season, but it will undoubtedly become a large coal handling point in the near future. At present the coal is taken direct from vessel to cars by means of locomotive cranes, and is being stored adjacent to the main line at Key Jct., six miles from the harbor. With the development of the harbor, no doubt coal storage will be arranged for there. The steamboat Kirby, which arrived Nov. 1, was the first coal carrier to reach the harbor. The ore dock adjoins the coal dock and the Kirby took back to Cleveland a load of Moose mountain iron ore. It is expected that the carrying of coal up and ore down will develop into a large trade and make a most economical operation.

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

17736. Sept. 17.—Defining express delivery limits in Halifax, N.S.

17737. Oct. 18.—Authorizing G.T.P. Branch Lines Co. to carry traffic over its Alberta coal branch from Bickerdike, Alta., mileage 0 to 36.6.

17738. Oct. 17.—Ordering Atlantic, Quebec and Western Ry. to build crossings, culverts and drains where required along its line.

17739. Oct. 18.—Approving Niagara, St. Catharines and Toronto Ry. location in St. Catharines, Ont., from Welland avenue, just south of G.T.R., to Welland canal crossing, mileage 0 to 0.75.

17790. Oct. 18.—Authorizing C.N. Ontario Ry. to build across Bartlett, Osler, Dufferin, Hamburg and St. Clair avenues, overhead, and Geary and Salem avenues, Toronto, by overhead structure and diversion.

17791. Oct. 18.—Authorizing G. T. P. Branch Lines Co. to build spur for Monarch Lumber Co., Regina, Sask.

17792. Oct. 19.—Amending order 17738, Oct. 8, by substituting Davidson for Davies.

17793. Oct. 18.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance at mileage 41.45, Camden tp., Ont.

17794, 17795. Oct. 18.—Authorizing C.N. Ontario Ry. to build overhead across Weston road, Toronto, and across Montgomery road, Etobicoke tp., Ont.

17796. Oct. 18.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plan of undercrossing at mileage 169.48, Pickering tp., Ont.

17797. Oct. 17.—Approving Vancouver, Victoria and Eastern Ry. (G.N.R.) plan showing additional land required for accommodation of slopes and bridges over Sumas river, B.C.

17798. Oct. 19.—Approving C.N. Ontario Ry. location through unsurveyed territory in Thunder Bay district, mileage 398 to 413 from Sudbury Jct.

17799. Oct. 19.—Approving G.T. Pacific Ry. station and site at Tete Jaune Cache, B.C.

17800. Oct. 17.—Approving James Bay and Eastern Ry. location of station grounds at Pointe Bleue, Que.

17801. Oct. 18.—Authorizing Niagara, St. Catharines and Toronto Ry. to cross G.T.R. on Welland avenue, St. Catharines, Ont.

17802. Oct. 12.—Authorizing Canadian Northern Ry. to build bridge across Atikokan river at mileage 139.9.

17803. Oct. 18.—Approving C.N. Ontario Ry. revised location through Nelson tp., up east side of Flamboro tp., mileage 31.54 to 37.50 from Toronto.

17804. Oct. 19.—Authorizing C.P.R. to build spur for Robertson Gravel Co., Wexford tp., Que.

17805. Oct. 16.—Authorizing C.P.R. to move station on lot 2, con. 5, to lot 2, con. 3, at Ingersoll Jct., Ont.

17806. Oct. 18.—Ordering G.T.R. to build farm crossing for J. E. Rosger, lot 7, con. 10, Ellice tp., Ont.

17807. Oct. 11.—Authorizing Canadian Northern Ry. to build bridge across Kashabowie river, on main line east, mileage 80.7.

17808. Oct. 19.—Ordering C.P.R. to fence its right of way at Duck Cove, N.B., on south side of D. R. Jack's west line to 100 feet east of Mrs. De Soyres' gate.

17809. Oct. 19.—Authorizing C.P.R. to build extension to Guelph Stove Works siding, Guelph, Ont.

17810. Oct. 21.—Approving Canadian Northern Ry. location through Estevan, Sask., mileage 8.02 to 8.98.

17811. Oct. 21.—Authorizing C.N. Ontario Ry. to build across concession road between cons. 10 and 11, Chisholm tp., station 47.53.

17812. Oct. 22.—Authorizing C.P.R. to operate trains, without their first being brought to a stop, over westbound second track where same crosses C.N.R., Birds Hill branch, mileage 119.18, near Woods, Man.

17813. Oct. 19.—Approving White Pass and Yukon Route, joint passenger tariff of tolls, supplement 1 to C.R.C. 6.

17814. Oct. 21.—Ordering C.N. Ontario Ry. to build farm crossing for G. Boyce, Nepean tp., Ont.

17815. Oct. 22.—Appointing Commissioner McLean to examine, under oath, any witness resident or at present in Canada, produced to give evidence material to complaint of Blind River Board of Trade and London Rolling Mill Co., alleging that G.T.R. and C.P.R. unjustly discriminate against Blind River, Ont., on shipments of bar iron.

17816. Oct. 21.—Authorizing C.N. Ontario Ry. to build across six highways in Chisholm tp.

17817. Oct. 22.—Authorizing, temporarily, G.T.P. Branch Lines Co. to carry traffic over its Oban-Battleford branch, mileage 0 to 48.5.

17818. Oct. 21.—Authorizing C.P.R. to take, for construction of team yard, certain lands in civic Delorimier ward, Montreal.

17819. Oct. 22.—Authorizing C.P.R. to cross at grade Pelham avenue, West Toronto, Ont.

17820. Oct. 22.—Approving Canadian Northern Ry. location through tps. 35-38, rgs. 8-14, w. 2 m., Sask., mileage 93.85 to 135.52.

17821. Oct. 21.—Approving location Vancouver, Victoria and Eastern Ry. double track between mileposts 146.841 and 153.619.

17822. Oct. 21.—Authorizing C.P.R. to take, for constructing team delivery yard, lands fronting on Mance street and Esplanade avenue, in Laurier ward, Montreal.

17823. Oct. 22.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across six highways, mileage 161.13 to 164.42.

17824. Oct. 21.—Approving C.N. Ontario Ry. location through Hochelaga county, Que., mileage 55.23 to 59.42.

17825. Oct. 22.—Authorizing C.P.R. to build spur for Paquette and Gauthier at St. Martin Jct., Que.

17826. Oct. 23.—Suspending, until Feb. 4, 1913, tariffs of C.P.R., G.T.R., C.N. Quebec and Temiscouata railways, increasing rate on shipments of pulpwood.

17827. Oct. 24.—Authorizing G.T. Pacific Ry. to build branch from mileage 788.21 from Winnipeg, to Humberstone coal mine; and rescinding order 16654, May 29.

17828, 17829. Oct. 22.—Authorizing G.T.R. to build sidings at Ridgeway, and for MacDonald Thresher Co., Stratford, Ont.

17830. Oct. 22.—Authorizing G.T. Pacific Branch Lines Co. to build its Biggar-Calgary branch across highway between sec. 23, tp. 31, r. 1, w. 4 m., mileage 104.06, Saskatoon district, Sask.

17831. Oct. 23.—Authorizing G.T. Pacific Ry. to carry freight traffic on its Tofteld-Calgary branch between Trochu, mileage 121.4, and Beiseker, mileage 162.6.

17832. Oct. 23.—Authorizing C.P.R. to open for traffic its second track from mileage 42.46, at Highlands, to mileage 43.91, at south switch, Que.

17833. Oct. 23.—Authorizing C.P.R. to build spur for Canadian Fairbanks-Morse Co., Winnipeg.

17834. Oct. 23.—Approving location C. N. Ontario Ry. station grounds at Callander.

17835. Oct. 23.—Authorizing C. N. Ontario Ry. to build across public road between cons A and B, Westmeath tp.

17836-17837. Oct. 23, 22.—Authorizing G. T. R. to build sidings and spurs for Shortreed Lumber Co., Kearney, Ont., and Canadian Rumley Co., Toronto.

17838. Oct. 23.—Authorizing G. T. Pacific Branch Lines Co. to build its Prince Albert branch across highway between secs. 6 and 7, tp. 46, r. 26, w. 2 m., mileage 91.8, Saskatoon district, Sask.

17839. Oct. 23.—Authorizing G. T. Pacific Branch Lines Co. to build its Calgary-Boundary branch over Diamond Coal Co.'s spur in n.e. ¼ sec. 21, tp. 9, r. 22, w. 4 m., overhead.

17840. Oct. 14.—Authorizing city of Vancouver, B.C., to build Hastings, Pender, Keefer and Harris streets across Vancouver, Victoria and Eastern Ry. overhead.

17841. Oct. 1.—Approving revised location C. N. Ontario Ry. through unsurveyed territory, Algoma district, mileage 280.5 to 290.6.

17842. Oct. 23.—Relieving C.P.R. from providing further protection at Main street crossing, Chesterville, Ont.

17843. Oct. 24.—Authorizing C.P.R. to build across 12 highways in Manitoba and Saskatchewan, mileage 31.27 to 65.3.

17844. Oct. 24.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build bridge across highway at mileage 95.25, Brighton tp., Ont.

17845. Oct. 24.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build bridge across road between lots 28 and 29, con. 2, Whitby tp., Ont., mileage 164.42.

17846. Oct. 23.—Approving plan of structural work of Canadian Northern Ry. bridge over C.P.R. secondary canal B, in sec. 9, tp. 25, r. 26, w. 4 m., Alberta.

17847. Oct. 24.—Extending, until July 1, 1913, time within which C.P.R. may operate its Manitou Lake branch from its Pheasant Hills branch, in sec. 6, tp. 40, r. 10, w. 3 m., to sec. 32, tp. 43, r. 21, w. 3 m., mileage 0 to 27.3, between Wilkie and Cutknife, Sask.

17848. Oct. 23.—Requiring Esquimalt and Nanaimo Ry. to appoint permanent agent at Cowichan, B.C.

17849. Oct. 24.—Authorizing C.P.R. to construct third track, south of its present tracks, across Jacques-Cartier Union Ry. Co., on lot cadastral no. 908, Lachine parish, Que.

17850. Oct. 24.—Authorizing G. T. P. Branch Lines Co., temporarily, to carry traffic over its Biggar-Calgary branch from Biggar to no. 1 siding, 7.1 miles.

17851. Oct. 24.—Authorizing C.P.R. to build spur for John Irwin Co., Calgary, Alta.

17852. Oct. 25.—Authorizing C.P.R. to carry freight, temporarily, on its Lacombe easterly branch, from Coronation to Consort, Alta., 32 miles.

17853. Oct. 24.—Authorizing C.P.R. to build spur for Canadian Milk Products, near Belmont station, Ont.

17854. Oct. 25.—Authorizing C.P.R. to cross, for construction purposes only, G. T. R. Toronto Ry. tracks, and John street, Toronto, crossings when in operation to be protected by watchmen.

17855. Oct. 25.—Authorizing C.P.R. to build subway at east end of Coquitlam yard, B.C.

17856. Oct. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build bridge over road in Camden tp., Ont.

17857. Oct. 25.—Authorizing G.T.R. to build siding for J. Johnson in Vespra tp., Ont.

17858. Oct. 24.—Authorizing G. T. P. Branch Lines Co. to operate trains, without being brought to a stop, over C.P.R. Pheasant Hills branch, in n.e. ¼ sec. 36, tp. 36, r. 16, w. 3 m., Saskatoon district, Sask.

17859. Oct. 22.—Approving location C. N. Ontario Ry. station grounds at Twin Elm, Nepean tp., Ont.

17860. Oct. 24.—Authorizing town of Pointe aux Trembles, Que., to extend Desnoyers avenue across C. N. Quebec Ry.

17861. Oct. 28.—Directing G. T. Pacific Ry. to build farm crossing for J. McArthur, of Pasqua, Sask.

17862. Oct. 19.—Authorizing C. N. Ontario Ry. to build across Sault au Recollet road, Montreal, overhead.

17863. Oct. 26.—Authorizing C.P.R. to build spur for St. Lawrence Bridge Co., crossing main spur and connecting with G.T.R. spur in Lachine parish, Que.

17864, 17865. Oct. 26.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge across highway at mileage 141.27, Clarke tp., and across Marmora street, Trenton, Ont.

17866. Oct. 19.—Refusing application of residents in and around Tete Jaune Cache, B.C., for order directing G. T. Pacific Ry. to build station between mileposts 49 and 50.

17867. Oct. 30.—Refusing application of residents of Erickson, B.C., for order directing C.P.R. to remove loading platform to another location.

17868. Oct. 30.—Authorizing C. P. R., temporarily, to build spur for Anthes Foundry Co., Winnipeg.

17869. Oct. 24.—Directing C. P. R. to build spur from main line east of Neebing avenue, Fort William, Ont., to 100 feet south of C.N.R., passing under C.N.R. by subway; and directing C.N.R. to raise its railway at least 13 feet, so as to carry it over Neebing avenue, and the proposed branch line; and construct temporary structure across Neebing avenue; and rescinding orders 17281 and 17740, Aug. 13 and Oct. 11.

17870. Oct. 25.—Directing Cumberland Ry. and Coal Co. to equip its cars with automatic couplers and air brakes, within 12 months from date.

Electric Railway Department.

Montreal Tramways Company's Track Construction and Methods of Cost Keeping.

By J. D. Evans, Chief Engineer and Superintendent of Construction.

The city of Montreal is situated on an island about 32 miles long and 10 miles wide, surrounded by the St. Lawrence river on the southerly and easterly side, and the Riviere des Prairies on the northerly and westerly side, and consists for the most part of plateau, except for Mount Royal, which rises to a height of 750 ft. above the river.

The city nearly surrounds the mountain, which, of course, makes some of the streets have steep grades, the maximum being about 11%. The average grade for the longest hill, which is 4,100 ft., is 6.2%, and the average grade for the shortest hill is about 10.6%. Our tracks cover the entire island fairly well, but as the streets for the most

Of the track mileage on city streets or highways, viz., 172.52 miles, about four miles of single track and 40 miles double track is laid on paved streets, in other words 84 miles of single track, or 44 miles of city paved streets, have tracks on them.

The subsoil in the streets of Montreal is for the most part blue clay, and for this reason we have decided to construct a concrete slab under our tracks, with ties spaced 2 ft. centres, separated from the slab with 1 in. sand cushion. After the rails have been laid and the track brought to proper surface and alignment the ties are entirely concreted in, this concrete serving as a foundation to the pavement. The pavement is

87-399 H. J. Skelton and Co.

96-357 Lorain "Trilby" section.

108-398 Lorain girder guard, Dick Kerr, 96C.

116-434 Lorain lip rail, Dick Kerr, section 142.

132-443 Lorain guard rail, Dick Kerr, section 141.

We have within the last year standardized on three rail sections, viz., for suburban work 80 lbs. A.S.C.E. 5 in. T, 87 lbs. T rail, 7¼ ins., where we are permitted by the city franchises to use same on paved streets, and where we are obliged to use girder rail we use 116 lbs.

Where guard rail is used we use the 108

Rail Sections, Montreal Tramways Co.

part are narrow and so laid that none of them can be classified as arterial streets, we have to contend with some difficult problems in construction, because the car routes are so laid out that it is impossible to divert traffic on most of them during the reconstruction period, which feature alone increases the costs.

The Montreal Tramways Co. controls the following companies:—

Montreal Street Railway	148.01	miles track
Montreal Park & Island Ry.	53.36	" "
Public Service Corporation	6.12	" "
Montreal Terminal Railway	28.42	" "
Total mileage	235.91	" "

Of the above 172.52 miles is laid on city streets or highways, 39.86 miles on private right of way, 55.14 of single track, and 78.62 miles of double track. The total of siding and car barn tracks is 23.53 miles.

either of scoria block, granite block, or granitoid.

Those who have seen the track allowance on the streets on which the cars run may have gone away with the impression that the construction of the tracks is not of the best, but as the city does all the paving construction the company is not responsible for this item, and when the fact is added to this that foundation under the concrete is in many cases composed of rubbish or a bed of an old creek, composed of quicksand or clay, the holding of the track with modern heavy cars passing over it causes the paving to break up rapidly.

Our rail sections are as follows:—

80 lb. A.S.C.E. tee, made in Sydney, N.S.
87-425 Lorain section girder guard, Dick Kerr, 57A.

87-399 Lorain section tee, H. J. Skelton and Co.

lbs. G.G., which fishes with the 96 lbs. girder rail, and 116 lbs. girder rail which fishes with the 132 lbs. girder guard. Plan 99 I-L-A shows our rail sections used at present.

The rail plate which we have adopted as our standard is the continuous joint 6 hole, as per plan 121 I-C.

The 116 lb. girder and 132 lb. girder guard rail sections that we adopted this year we are not perfectly satisfied with, because we consider that the back is not bevelled off enough, and we much prefer the 7 in. girder rail sections which have been recommended recently by the American Electric Railway Association's committee of way matters.

As we are great believers in a more flexible foundation for all track construction we have adopted the concrete slab construction which is shown in plan 171 I-B, and have abandoned the concrete stringer con-

struction and the use of steel ties, composed of 4 by 6 in. angles and 10 in. channels, for the following reasons:—

It affords too rigid a construction and causes the rail to become cupped at the joints, and in case of intersections they pound out much more quickly than on a more flexible foundation.

Where concrete stringer and steel ties were used our experience has shown that the rail could not be renewed and still use the steel tie, because the holes in the tie, through which the bolts pass to fasten the rail, become rusted out, or if they do not become rusted any loosening of the tie in the concrete will loosen the grip of the concrete on the head of the bolt, the result being that it is impossible to remove the nut, therefore the bolts have to be cut off and others could not be used without excavating under the tie.

Almost invariably where the rails were placed directly on a concrete stringer with or without steel ties, but with tie rods, this type of construction has proved insufficient to withstand the constant vibration and pounding of cars over it, for in time it causes the cement to disintegrate or crack, thus allowing water to go into these cracks and the action of frost damaging the concrete to such an extent that the rails gradually begin to work their way down into same, in many cases as deep as $1\frac{1}{2}$ ins., particularly so at the joints. In cases where we have used the concrete stringer construction at intersections we in many cases embedded inverted scrap rails so that the special work would rest on them without using any ties, and fastened to the inverted rail with special bolts. This type of construction has proved to give too rigid a foundation, which lessens the life of the special work, and the inverted rails cracked the concrete, with the same result as above.

We suppose that our procedure in handling construction work is similar to other large

is better to have these two departments under one head, inasmuch as the engineering department plans and inspects the work thoroughly carried out by the construction department. You will see from this feature that both departments are dependent one upon the other to such a degree that more perfect harmony and better team work results than would be the case if they were separated and the head of each department reporting direct to the General Manager. We do not know but that some other com-

be adopted during construction. As soon as any work has been authorized the engineering department gets out full detail specifications, copies of which are given to the Chief Inspector, who delegates an inspector to look after the particular job, a copy also being sent to the Assistant Superintendent of Construction, who in turn hands it to the roadmaster for the guidance of himself and foreman in charge of the work.

The general instructions that we give to our inspectors we think should be men-

Continuous Joints in 96 lbs. Girder Rails, Montreal Tramways Co.

panies are organized in the same way, and our only idea for mentioning it is because we know of many railways where the engineering and construction departments are two entirely separated departments. The accompanying chart shows the present organization of the engineering and construction departments.

The engineering department decides on what work is to be recommended and gets up the detail estimates (except in emergency repairs, which are handled by the construction department without any estimate as to the work to be done and specifications to be followed) which are approved by the

tioned in this paper. They are as follows:—

INSTRUCTIONS TO INSPECTORS.

1. FOREWORD. Careful inspection is a vital factor in securing safe and enduring work. No matter how well the engineer may design, his work will come to naught unless his design is accurately carried out by careful and skillful workmanship, with good materials, and it is the duty of the inspector to see that this is done. However, the inspector should bear in mind that it must be his object to help, and not to hinder, the work in progress.

In the following pages all work will be classified under separate headings, as given on form I-D 337.

2. REMOVING PAVING. Paving must be removed as specified, and care must be taken to see that blocks are piled in such a manner that

Granitoid Paving With 80 lbs. A.S.C.E. Rails, Montreal Tramways Co.

electric railway systems, but nevertheless we will endeavor to outline the methods used by us.

Our engineering and construction departments are under the direct charge of one head, the Chief Engineer and Superintendent of Construction, who reports direct to the General Manager. The engineering department is under the control of the Assistant Chief Engineer, and the construction department under the control of the Assistant Superintendent of Construction, who in turn reports to the Chief Engineer and Superintendent of Construction. We find that it

Chief Engineer as per form 100.

This estimate is then summarized on form 193 and sent to the Comptroller, who in turn has a special form 66, which is sent to the General Manager for authorization. After receiving the General Manager's approval the Comptroller then sends on work order authorizing the work on form 251. This comes to the Chief Engineer, who signs same and sends it to the Assistant Superintendent of Construction with any special instructions he cares to issue, which are usually confined to the date when the work is to be started, or any special methods that are to

they will not interfere with any other branch of the work.

3. EXCAVATING CONCRETE. Concrete is to be excavated under three headings, which are to be specified and classed accordingly:—

(a) Picking:—As a rule, concrete will be excavated by picking, and in the first instance this will be found where, if either of the other classifications are to be followed or not, if the concrete is of medium thickness or is inclined to be soft, picking will be followed.

(b) Hammer breaking should be followed where the picking has loosened up a large block or where the concrete is unsupported by material underneath.

(c) Wedging is to be used where the block of concrete is exceptionally thick and starting of the wedge has been made by picking to be used!

for breaking concrete into large blocks, such as can be lifted by the crane or broken by the hammer; also, in cold weather wedging will be found the better way to excavate the concrete.

4. EXCAVATING MAODAM. Care must be taken to see that the points and elevations as given by the company's engineers are followed exactly and report the foreman in charge of work if he allows his men to cart the earth in shovels in any distance beyond which it may be cast by the shovels, but if the distance is too long to be cast by the shovels, wheelbarrows are to be used.

5. REMOVING TRACK. Track to be removed as specified and all old rails, plates, switches, ties and other material to be carefully piled and marked.

(a) Blue for all material that is considered can be used again with economy and which would be classed as seconds, and

(b) Red, material which cannot be used again

plies enough material for a section of slab reaching half way to the next adjacent stock pile, and they should not contain more or less material, otherwise a surplus remains to be cleaned up or a deficiency to be supplied by borrowing from another pile. A little care will ensure the proper distribution and more money is saved by not rehandling surplus or borrowed material. The inspector should confer with the foreman on the quantity of material thus to be piled and advise him.

Proportioning. The duty of the inspector is to make certain that the specified proportions are accurately and uniformly adhered to; the inspector should bear in mind that while splitting hairs is not warranted, slipshod and careless methods are not to be tolerated.

Mixing. See that the mixing operations are conducted according to a regular system, that is, to see that the proper mixture of sand, cement and stone is adhered to, and before any work

stone, and all ballast must be well tamped and rammed under the ties, especially under the rail and for one foot each side of the rail.

10. BACKFILLING. Specifications must be followed in this regard, where the backfilling consists of material from street or new macadam, it must be well rolled, and in the case of new macadam good sand must be used for blinding same.

11. PAVING. If old blocks are to be relaid they must be well cleaned and scraped, and after rails have been plastered with a mixture of sand and cement they must be laid as specified; care must be taken that paving is laid as uniformly as possible, and that no hollows or irregularities are left in the surface.

12. REMOVING EXCAVATED MATERIAL. Inspectors must see that excavated material is shovelled direct into cars and not carried in shovels. Dump cars should be used wherever obtainable, and loads on cars be distributed as

Organization Chart, Engineering and Construction Departments, Montreal Tramways Co.

and which is to be classed as scrap. In all cases when possible where tie rods and bolts can be saved it will be necessary to see that the foreman does not allow his men in cutting off the nut to injure the bolt or tie rod; this is done so that tie rods and bolts can be used over again by the application of a new nut and having thread cleaned. All material to be taken away to stores yard and report made of same to office, and receipt to be taken from storekeeper. The different grades of material are to be piled separately in the yard, that is, seconds to be kept separate from scrap, tie rods and bolts to be delivered to the blacksmith's shop to fix up threads and have nuts put on.

6. LAYING TRACK. All track is to be laid on ties 2 ft. centres, standard gauge 4 ft. 8½ in., and standard devil strip to be 4 ft. 9 in., unless otherwise specified. Joints must be suspended joints, that is, tie under each end of joint. If a gully or manhole will not permit the proper spacing of ties the stringers must be placed parallel with rail. Specifications as given by the engineering department must be followed absolutely and any deviation from same at once reported. All ties must be well spiked with four spikes, and in the inside of radius of rails of curves to be double spiked. Joints must be well hammered up to place and bolts installed. Care must be taken to see that bolts are not overstrained, and lock nuts must be used on all bolts. Tie rods must be installed on all rails above the 5 in. or 80 lbs. rail, 4 ft. centres and nut both inside and outside of web must be well tightened up and the track placed accurately to gauge.

7. CHANGING INTERSECTION. Inspectors must see that points given by the engineer are followed and special ties laid as shown on plan. No intersection will be laid without special ties except under the order of the engineer. Special heavy National lock nuts will be used on all intersections, and care must be taken to see that all bolts are of sufficient length to have at least the full length of the bolt in the nut. At all ends of intersections the high lip on the G.G. rail, which stands above the level of the head of the rail, must be cut down on an angle to meet the level of the rail; this cut should extend not less than 9 in. on the angle.

8. CONCRETING. Storage of cement. The requisites for the proper storage of cement are protection from dampness and excessive heat. All cement must be piled on raised platforms or planks or ties and covered with tarpaulins. Supplies of cement as well as other material must be piled as close to the work as possible, though traffic must not be impeded whatever in doing so.

Inspection of sand. Sand composed of round grains makes quite as strong mortar as does sand composed of angular or sharp grains, but if composed of a mixture of fine and coarse grains would be better, but between a coarse and a fine sand of one size of grain the coarse sand is better to use. All sand must be clean and sharp as possible.

Inspection of stone. Stone should be the size specified and free from stock or loam.

Distribution of stock piles. In slab work stock piles should be so distributed that each pile sup-

plies enough material for a section of slab reaching half way to the next adjacent stock pile, and they should not contain more or less material, otherwise a surplus remains to be cleaned up or a deficiency to be supplied by borrowing from another pile. A little care will ensure the proper distribution and more money is saved by not rehandling surplus or borrowed material. The inspector should confer with the foreman on the quantity of material thus to be piled and advise him.

Preparation of foundation. Foundation must be levelled off and compacted and must be thoroughly wetted down before any concrete is placed on it, as a dry foundation draws moisture from the concrete.

Wheeling. It is important that in wheeling concrete across tracks, boards or runways must be laid so that rails are not an obstruction to the passage of the barrows, as the added cost more than counterbalances the time lost in lifting wheelbarrows over obstructions, etc.

Placing. Wet concrete requires very little tamping or spreading, but care must be taken to see that it is well tamped under rails and ties

evenly as possible.

13. BONDING. All bonds to have brazed terminals, and all cable connections down centre of track must be brazed to each rail, 8½ in., 12 in., and brazed cable bonds will be used as specified, and any deviation from this rule must be reported at once.

After the specifications as to how the work is to be carried on are issued the engineering department gets up the details for all the material required for the job on form 192, which is sent to the Purchasing Agent as well as to the Assistant Superintendent of Construction. The Purchasing Agent sends his copy to the Chief Storekeeper, as his authority for issuing the material shown thereunder, but only upon requisitions from the construction depart-

Blocking for Installing Concrete Slab for Intersection Work, Montreal Tramways Co.

and that the surface is brought up to the required grade and smoothed and evened, that expansion joints are to be left where ordered. Care must be taken not to have longer distance than 60 ft. in length of slab. At close of work at night all work must be brought to a finish at the end of a slab.

Wetting down. In hot weather concrete must be wet down once or twice each day for at least a week after it has been placed, in order to allow the inside concrete proper time to set and stop checking and cracking by uneven setting.

9. BALLAST. Unloading ballast. When ballast is to be spread out over a space of comparatively small area it is preferable to dump the cars using wings to spread ballast, but when material must be spread out to 200 to 300 ft., as in placing final material under ties, it is cheaper to drop car doors by pulling out cotton pin at end of levers and unload by hand the quantity required.

Ballasting. Specifications must be strictly adhered to in regard to depth of fill and size of

ment per form 15. It is the duty of the inspectors to see that the material received on the job is properly checked and reported to the Assistant Superintendent of Construction, also to see that old material is returned to the stores department for proper credit. In case the stores department order form 192 does not show the quantity of material required for the job, on account of some unforeseen change, it is immediately reported to the engineering department, which in turn makes out a supplementary statement and sends to the Purchasing Agent for him to instruct the storekeeper. This is done only after the original authorized estimate has been extended by the proper authorization from the Comptroller.

through the General Manager.

As soon as the work begins daily reports are sent to the construction department on form I-D 337, which are signed by the inspector, checker and foreman. This report must show the quantity of work done under each classification and the unit cost of same. It also shows the material received and sent away.

The daily reports are posted on form 999 by the cost clerk, whose duty it is to check the daily unit cost for each class of work, and to compute the total unit cost to date as the reports come in, also to enter up the material used on form B-6357.

The Chief Engineer and Superintendent of Construction is given a daily statement showing the comparative cost of labor on form B-5447 for all construction jobs under way. We consider this report very necessary, because the unit costs to date are shown, and if they are running higher than the estimate unit costs an investigation is immediately made and the cause remedied, if possible. Besides the unit cost report we are using a report showing the total cost to date. This report should be used in conjunction with the unit cost report, as it is quite often the case that the unit costs are running under the estimated unit costs, but the quantities are overrunning the estimated quantities, which will make the actual total cost exceed the estimated total cost.

A very good way to reduce the cost of a given job is, where you have a piece of double track to reconstruct, to have one foreman do one side, and after this is completed to change the foreman and gangs for constructing the other side. In one case where we did this the foreman who started the work was removed when it was time to do the other side, and the foreman who came to do the second track under the same specification reduced the total cost 12%. Of course the second foreman knew that he was being judged by the work of the first foreman, and he naturally tried to win out by beating the other man's labor cost. You can readily see that this brings about a healthy condition of affairs which is to the advantage of the company. We do not feel that this would be good practice for the best results in obtaining first class work, unless there is an inspector looking after the quality of the work.

Besides the unit daily reports, form I-D 337, we require the inspectors reporting to the engineering department to make out a daily diary of all work done, forces employed, etc., as well as to describe any accidents or anything unusual which might happen. These reports make interesting reading and help to keep the Chief Engineer and the entire office staff up to date as regards the details of construction, which is very important if one is to superintend by being entirely conversant with all the facts, and not to superintend in name only.

Watchmen's reports are kept on form 132 B.

Weekly record of tools is kept on form 171.

Accidents are reported on form 274.

We are of the opinion that we are getting the right kind of data as to cost keeping by the shortest methods, and one thing we are sure of, and that is, that we know what is going on at all times, which we feel would be impossible if we did not have the present system in force. We make it our aim to have a logical reason for doing everything and we are not afraid to say that we make mistakes, but we try not to make the same mistake in the same way the second time. We consider that by having the general instructions to inspectors carried out that it will continually aid in the reduction of the unit costs.

The unit costs of our work are affected

by traffic conditions:—

1. Keeping cars running.

2. Keeping streets open for vehicular traffic.

It is very seldom that we can have the full use of any street and the tracks for reconstruction purposes. We will now cite below some of our unit costs.

1. TRACK RENEWALS.

Of seven jobs the unit costs averaged, with traffic running, as follows:—These jobs estimated to cost a total of \$88,000.

Taking up paving—17½c. per sq. yd.
Excavation of concrete—\$2.02 per cu. yd.
Excavation of macadam—60c. per cu. yd.
Removing track—11c. per lin. ft. This includes entire work of taking up track and transporting material back to store yard.
Tracklaying—18c. per lin. ft. This includes taking material from store yards, and laying track completely, spiked and bolted.
Ballasting—88c. per cu. yd. This includes the delivering of the ballast and the surfacing, lining and tamping of track.

the tie, quantity small as compared to the labor. Laying concrete slab and concrete for paving base—\$1.75 per cu. yd.

Paving, scoria block—37½c. per sq. yd.
Removing excavated material, including transportation to dump—57c. per cu. yd. Unit cost dependent upon haul to dump.

Labor changing intersection averaged \$405 per intersection. This item includes taking new and old material to and from the store yard.

BONDING INTERSECTION.

Stringing cable—3.5c. per lin. ft.
Drilling holes—8c. per hole.
Installing cable bonds—11 3.5c. per bond.
Installing brazed bonds—23c. per bond.
Grinding for bonds—17c. per joint.
These two latter costs change depending upon traffic conditions.

Our intersections are mostly constructed of solid manganese steel to the rail sections specified for all switches, inates, frogs, crosses, etc., and for city work we adopted as our standard this year Lorain Steel Co.'s section 116-434 girder rail, and 132-443 G.G.

Typical Intersection, Montreal Tramways Co., Showing Layout of Ties.

Concreting—\$1.59 per cu. yd. This includes the labor cost of laying the concrete slab as well as the concrete foundation for the pavement.
Paving—Scoria blocks, 39c. per sq. yd. This includes labor, laying and grouting.
Backfilling—46c. per cu. yd. Including tamping or rolling.

Removing excavated material—61c. per cu. yd. This includes labor and transporting material to dump.

The bonding unit costs on the above jobs are as follows:—

Stringing cable—2c. per cu. ft. Includes transportation of material from the stores department.

Drilling holes for cross bonding—8½c. per hole.

Installing cable bonds (plug terminals)—16c. per bond.

Installing brazed bonds—14½c. per bond.

Grinding for bonds—8½c. per joint.

2. INTERSECTION RENEWALS.

On six jobs the unit cost ran as follows:—

Taking up paving—13c. per sq. yd.

Concrete excavation—\$2.55 per cu. yd.

Macadam excavation—\$1.13 per cu. yd.

Removing track—15½c. per ft. Laying track—43½c. per ft. These prices are high because the track laid was only 15 ft. on each end of the intersection, the quantity being small.

Ballasting—\$2.09 per cu. yd. This item is high because ballast is only one inch thick under

rail, which fishes together, thus doing away with compromise joints. We have given up the idea of having the outer rails of curves guarded, and all curves are made transition to gauge, namely, 4 ft. 8½ ins. We require the manufacturer when accepting an order to agree to the following guarantee:—

The manufacturer agrees to replace:—
(1) Material in which defects develop within one year, at his sole expense.

(2) To replace any part of a given intersection that fails within the second year, at 50% of its value.

(3) To replace any part of a given intersection that fails within the third year, at 66 2-3% of its value.

The most difficult part of our track work to construct and maintain is the intersection work, because we always have to carry on the work by keeping the traffic running, and the roadway of the cars is often very close, and when the vehicular traffic is added to this, the wear and tear in the roadbed is found to be enormous. The most essential thing requisite in an intersection is a good foundation, not that the most rigid founda-

tion is the best, as we have explained elsewhere, but it should be placed on a well drained sub-base, with good stiff construction (concrete slab) over it to support the ties, rails and pavement. Various methods of designing the foundations for intersection work have been tried and our experience teaches us that with a more flexible foundation the life of the special work exceeds the life when placed on a rigid foundation, and with this in mind we have adopted the concrete slab 8 ins. thick on a well compacted sub-base with 1 in. sand cushion between it and the ties. The same general type of construction as is used in our straight track work per plan-171 I-B referred to in the beginning of this paper. As cited above we are constructing all intersections with traffic running, the only time cars are stopped is during the actual removal of a given intersection, and the placing of the new intersection which is usually between 8 p.m. and 5 a.m. Some of the smaller intersections are changed in five

hours. We bring into use to a great advantage in changing the steel work of the intersections a five ton electric traction crane. When we have an intersection to renew we confer with the Superintendent of Transportation as to the most convenient time for him to give us full use of the particular location in order to divert the traffic by other routes. As soon as the date is arranged when the cars can be diverted, we start removing the paving blocks, and after this work is completed we arrive on the job on the appointed day at 8 p.m. with the electric traction crane and all material loaded on flat cars. As soon as the joints have been disconnected the crane car begins to remove the intersection and place the pieces on the side of the street. After they have all been removed the crane hoist begins to unload the new material and set it as close to final position as is practicable. The new work is painted in colors to correspond to the corners at which it is to be finally placed, as shown by erection plan.

ing St. Thomas on the hour. In this way, three passenger cars, two of which also carry baggage and express, would give a half hourly service between London and St. Thomas, and an hourly service between St. Thomas and Port Stanley, which would probably meet the most exacting requirements for ordinary traffic.

As to the type of car, it is believed that one having a weight, loaded, of approximately 40 tons, would give the requisite characteristics for safety and easy riding qualities so much desired in interurban railway service. Such a car would call for an equipment of four 100 h.p. motors (nominal rating), with a full speed (45 to 50 miles an hour) requirement of about 150 e.h.p. The power, while starting or accelerating, would momentarily reach 300 k.w., or 400 h.p., but the duration of the starting load would be so short as to have no effect on the 10 minute peak under which power is purchased. The equipment with four 100 h.p. motors gives sufficient margin to allow for hauling a trailer, if the traffic is heavy enough to warrant it.

A 60 to 75 ton locomotive equipped with four 125 to 150 h.p. motors, would draw a train of from 700 to 800 tons, or from 3 to 10 loaded cars, at 15 to 25 miles an hour, with a power requirement of 175 to 250 k.w., the starting of such a train taking momentarily about 500 k.w. This freight locomotive would make the run from Port Stanley to London in from an hour and a half to an hour and 50 minutes, allowing for stops at such points as would be necessary in permitting passenger cars to go by it.

Ordinary conditions of traffic, represented by three passenger cars and one freight train, would require approximately 600 k.w., on a ten minute peak basis, with momentary peaks of twice that amount. Allowing for transmission and conversion losses, this would amount to approximately 1,000 h.p.

It is estimated that, for handling heavy passenger traffic in summer, each passenger car will be supplied with a trailer, and a half hourly service maintained from London through to Port Stanley; and, in addition to the above, a fifteen minute shuttle service could be maintained between St. Thomas and Port Stanley, at such periods of the day when the traffic warrants it.

With the equipment and service as indicated above, and with a proper charge for the service, it is believed that the passenger earnings alone should amount to over \$100,000 a year. According to the records furnished for 1910, the London and Port Stanley Ry. carried a total of 168,577 passengers, with a mileage of 3,183,466, an average travel of 18.89 miles per passenger, with a corresponding average revenue of 20.82c., or practically 11c. per passenger mile. October shows a passenger mileage of 100,990, with an earning of \$2,071.30, or over 2c. per mile. November shows a passenger mileage of 121,522, with an earning of \$1,290.80 or practically 1c. per mile, the mileage being 20% greater, and the revenue 40% less, than the preceding month.

A comparison with the London and Lake Erie Ry. and Transportation Co., which earns \$120,000 a year from passengers, mail, express and small freight, seems to indicate that the London and Port Stanley Ry., with its far superior service and schedule, as given below, can easily earn over \$100,000 from the same class of service. It is estimated that, with the superior service and schedule proposed, the passengers carried over this road will not be less than 450,000 a year, and that the haul will be about 18 miles. The passenger traffic, at a rate of 1.5c. per mile, will give a revenue of \$121,500 a year.

Proposed Electrification of London and Port Stanley Railway.

The London and Port Stanley Ry., which connects London and Port Stanley, Ont., is owned by the city of London and is leased by the Pere Marquette Ry., as successor to the Lake Erie and Detroit River Ry., the lease being about to expire. The following report, based upon instructions by the engineers of the Ontario Hydro Electric Commission and S. B. Storer, consulting engineer, Syracuse, N.Y., has been submitted to the London city council by Hon. Adam Beck, M.P.P. for London and Chairman of the Ontario Hydro Electric Commission:—

The track is in very bad condition, and it will be necessary to entirely reconstruct it, as the rails and ties are of no value other than scrap. The buildings are in fair condition, and, with a moderate outlay for repairs, can be made to answer the purpose of the road after electrification.

The amount expended by the city of London on the road is \$765,311.00. Physical statistics, revenue and operation of the present road under steam are as follows:—

Length of line	23.66 miles.
Length of track	33.69 miles.
Freight carried	572,000 tons.
Revenue from freight	\$ 92,132.00
Passengers carried in 1910, 168,577.	
Revenue from passengers for 1910 ..	35,097.00
Total earnings for 1911	141,264.00
Total earning for 1910	127,859.00

Operating expenses for 1910	\$138,131.00
Rent, taxes and percentage earnings paid the city	19,919.11

Total operation, including rentals, taxes, etc., but not including fixed charges	\$158,050.11
--	--------------

Of the above operating expenses, over \$50,000 was for fuel and repairs to locomotives and cars, and \$22,000 for pay of conductors, enginemen, brakemen and switchmen.

The London and Lake Erie Ry. and Transportation Co. operates between London and Port Stanley, with a length of main track approximately 15% greater than that of the London and Port Stanley Ry. The equipment in use consists of 12 passenger cars, closed; 10 freight cars, and two work cars. It carried in 1910, 637,861 passengers and 5,811 tons of freight, from which were obtained a revenue of \$103,835.50 for passengers, and \$12,513.00 for freight, together with miscellaneous earnings, giving gross earnings of \$122,988.92. The total operating expenses, including general expenses, rentals, insurance, etc., was \$77,699.78. The above expenses do not include fixed charges on capital. The capital is \$2,700,000, of which \$2,000,000 is stock, and \$700,000 bonds. This makes a capital expenditure of \$93,103.44 a mile.

The system of electrification will be of the overhead trolley type, using catenary construction, 3 point suspension, with wood poles, steel brackets, and 4/0 copper trolley. It is proposed to double track the line from London to St. Thomas, the remaining portion of the line being single track from St. Thomas to Port Stanley, the present road to be entirely reconstructed and replaced by new 80 lb. rails. The proposed overhead trolley system will be operated at 1,200 volts, d.c., with the substations located at London and at or near the Hydro Electric Power Commission's transformer station north of St. Thomas.

The proposed schedule of trains gives a high speed half hourly service between London and St. Thomas, and an hourly service between Port Stanley and St. Thomas, with freight locomotives running at the same time. Every other car is of the combination passenger, baggage and express type, making the run, with all stops between London and Port Stanley, in 54 minutes. A limited passenger car makes the run, without stops, between London and St. Thomas in 24 minutes. A summer schedule is also estimated upon, which gives a half hourly service between London and Port Stanley, with every car carrying a trailer, if necessary. It is also possible, with the equipment which has been provided, to give a 15 minute shuttle service between Port Stanley and St. Thomas, for especially heavy traffic.

The following car equipment has been estimated upon:—Six passenger cars, half of which is the combination passenger and baggage type, with each having four 100 h.p. motors and a multiple unit control for a maximum speed of 50 miles an hour. Four locomotives of 60 to 75 tons, equipped with four 125 to 150 h.p. motors, multiple unit control, and for ordinary speeds of 15 to 25 miles per hour while hauling a 750 ton train. Two snow plows and six trailers.

The above train schedule will handle the traffic under ordinary conditions for both freight and passengers. It comprises a local service combination passenger, baggage and express car leaving London on the hour, and stopping at all stations between London and Port Stanley, the complete run being made in 54 minutes. The trip from Port Stanley to London begins on the hour, and requires the same time for completion, giving a round trip every two hours. A limited passenger car leaves London on the half hour, and makes the run to St. Thomas in 24 minutes, no stops being made between these two cities. The return trip is made in the same time, leav-

From reliable information received, it is estimated that the freight traffic of the London and Port Stanley Ry. for 1911 was as follows:—572,000 tons of general freight over the Pere Marquette Rd., and not less than 150 to 200,000 tons of general freight carried by the Michigan Central Rd. over this road, or a total freight traffic of from 720,000 to 772,000 tons. About 400,000 tons of coal and steel were handled through Port Stanley, and, in addition to this, 150,000 tons of coal came through St. Thomas to London to Rondeau. The general merchandise was probably in the neighborhood of 200,000 tons, as it was 160,000 tons in 1909. The total tonnage during 1911 appears to have been as much as 750,000 tons, although the detailed reports do not so indicate. The reports show that the gross revenue during 1911, for the 572,000 tons of freight carried, was \$92,131.73. This is equivalent to 14.8c. per ton hauled, or a revenue of .9c. per ton mile for all classes of freight, on an average haul of 16.5 miles. It is estimated that an average minimum revenue of at least 40c. per ton will be obtained for first and second class freight, and 16c. per ton for coal and steel. The revenue from coal and steel, estimating on 400,000 tons hauled at 16c., is \$64,000, and from 200,000 tons of general merchandise, \$80,000, after allowing for car rentals, etc., or a total freight revenue of \$144,000. The rate used for general merchandise is very low, and would be found to be higher under operation.

The following estimate covers reconstruction of the present road from London to Port Stanley, using 80 lb. rails, and double tracking from London to St. Thomas, including overhead catenary construction, three point suspension, no. 40 trolley, substation and substation equipment, and the necessary feeder system.

Reconstruction of track and new track, and repairs to buildings	\$ 442,573
Overhead construction and bonding	129,000
Passenger car and locomotive equipment	235,000
Substation feeder equipment and new freight shed or warehouse for Port Stanley	84,000

Total capital expenditure for new construction and reconstruction track. \$ 890,573

The car equipment estimated upon is as follows:—Three combination cars for the accommodation of baggage, express and passenger traffic, together with three cars for passengers alone, each one of these cars being equipped with 4 100 h.p. motors suitable for operation at 1,200 volts d.c. and with multiple unit control, so that two or more cars could be operated as a train if so desired. Four 60 to 75 ton locomotives equipped with 4 125 to 150 h.p. motors with multiple unit control. Six trailer cars for operation with motor cars. Two snow plows. Estimated at a total of \$235,000 for equipment. All of the above cars and locomotives are provided with air brake equipments.

The following operating expenses have been estimated:—

Superintendence, administration, labor maintenance of track and equipment	\$ 70,000
General expenses	30,000
Power	30,000
Interest and sinking fund, at 6.3% on \$890,573	56,106
Interest, at 4 1/4% on moneys expended on present road, \$765,311	34,439

Or a total operating expenditure and fixed charge of

In maintenance of expenses an allowance is now made for oiling right of way.

SUMMARY OF THE ESTIMATED REVENUES AND OPERATING EXPENSES:

Net revenue from freight	\$140,000
Net revenue from passengers	121,500
Total gross revenue	\$261,500
Estimated operating expenses	\$130,000

Estimated interest and charges on capital expenditure	90,545
	220,545

Excess earnings over operation

From the above it is estimated that the road, under ordinary traffic conditions, will have excess earnings over operating expenses of \$40,955, which can be used for the redemption of bonds and depreciation.

The double tracking of the line from London to St. Thomas will answer the requirements of traffic for some time to come. In any event, should the conditions warrant it, the double tracking between St. Thomas and Port Stanley can be carried out at any time in the future without interfering with the operation of the road.

On the present right of way the grades and curves are small, giving an excellent road for a fast and safe passenger schedule between the cities. The cleanliness which is attendant upon electrical operation of the road will be an inducement to greater passenger traffic, and the more frequent service will add considerably to the business of the road.

I have slight hesitation in saying that with the freight traffic of the present road, and the increased passenger traffic, which I have no doubt will maintain, that the road can be made to pay a good profit after electrification.

The following are comparisons of operating expenses and estimated earnings under the assumed conditions, showing the results of operation:—

1. The estimated operating expenses and earnings when operated by an independent company or commission, this commission or company paying a rental to the city of \$20,000 a year. The freight and passenger service, as shown above, have been used in this estimate.

Operation and maintenance of road ..	\$ 130,000
Interest and sinking fund on \$765,311 ..	56,106
Rental to city	20,000

Revenue from operation, as given above

Or excess earnings over operating expense

2. This estimate covers the same equipment as used in estimate 1, but the earnings from the haulage of coal and steel have been omitted.

Operation and maintenance of road ..	\$ 130,000
Interest and sinking fund on \$890,573 ..	56,106
Rental to city	20,000

Total operating expenses

Earnings from passengers and freight other than coal

Giving an excess operating expenditure over earnings of

The operating expenses in this case can readily be reduced from \$4,000 to \$10,000, as the locomotives will not be required for the hauling of coal and steel from Port Stanley.

3. The equipment estimated under this comparison is the same as 1 and 2, with the exception that a single track only is constructed between London and St. Thomas. No earnings are estimated from the hauling of coal from Port Stanley. A single track line from London to St. Thomas would be satisfactory for the passenger service when the freight haulage is reduced to general merchandise between London and St. Thomas.

Operation and maintenance of road ..	\$ 125,000
Interest and sinking fund on \$615,000 ..	38,745
Rental to city	20,000

Total operating expenses

Earnings from freight and passengers, as per no. 2

Excess earnings over operating expenses

The report was discussed at a meeting of the London Board of Trade, Nov. 11, when a committee of citizens was appointed to enquire into the whole matter and obtain further information.

Following up the above action representatives of the Canadian Northern Ry., or Mackenzie, Mann and Co., appeared on the scene and asked for a conference with the L. & P.S. Ry. board, which is composed of representatives of the city of London. On Nov. 25 it was stated that such a conference would be held a few days thereafter, and that propositions to buy the line or to lease it would be submitted.

Hull Electric Railway Employees' Wages, Etc.

The conductors and motormen of the Hull Electric Co., which operates between Ottawa, Ont., and Aylmer, applied to the Minister of Labor a short time ago for a board of conciliation under the Industrial Disputes Investigation Act. The board appointed consisted of Peter McDonald, chairman; G. D. Kelly, representing the company, and G. C. Wright representing the men. The wages heretofore paid conductors and motormen were as follows: 1st year, 19c. an hour, 3rd year, 20c. an hour; 5th year, 21c. an hour.

The men asked that they be paid the same as the Ottawa Electric Ry. employees and submitted the following rates, viz.:—25 cents an hour for week days; 27 cents an hour for Sundays; time exceeding 10 hours, time and a half. The board of conciliation unanimously recommended that the following scale take effect Nov. 1:—First year men, 20 cents an hour; second year men, 21 cents an hour; third year men 22 cents an hour; men employed over three years 23 cents an hour. That motormen and conductors requiring an overcoat shall be supplied with one by the company every two years, the cost to be borne half by the company and half by the employee, this not to interfere with the present arrangement of supplying uniforms. That the company furnish each conductor with \$25 worth of tickets and cash to make change each day, each conductor to give a bond therefor. The award to be in force for 2 1/2 years. The board considers that in view of the different conditions of employment and the difference in cost of living the new scale is practically equal to that paid by the Ottawa Electric Ry.

The following important recommendation was also made: "The members of the Board are of the opinion that in view of the proposed increase of wages, and considering the financial condition of the company, as shown by its annual statement, and the evidence given before the board, the company would be justified in increasing its charge for fares."

Proposal for Municipal Electric Railways in Ontario.

At a meeting of the Ontario Municipal Electric Association, in Toronto, Nov. 15, G. R. Geary, city counsel of Toronto, who presided, said it had been called to consider if some plan similar to that by which the lighting and power plants of the province had been developed under the Hydro-Electric Power Commission could be devised with reference to the transportation problem.

Hon. Adam Beck, M.L.A., said the Hydro-Electric Commission would be only too pleased to help along the movement suggested. There were many difficulties in the way, for instance, the government had in the past only leased the right of way for its

transmission lines, in many places. It was intended in future to purchase these outright. There was no reason why electric railways, like other public utilities, should not be successfully operated by the people. He thought, however, that if it were the wish of the meeting that the commissioners should study and report upon the suggestions made for the establishment of lines of light railways for freight and passenger traffic it should only be asked to report upon the cost of construction, operation and probable revenue. The matter of financing should be left over to be dealt with separately.

The following resolution was adopted: "That it is desirable that a system of electric railways, including street railways, to be owned by the municipalities, be established and built, and further, that the Hydro-Electric Power Commission be requested to look into the advisability and practicability of building such a system and to furnish a report thereon to this association. In order that the request to the Commission be made definite, it is further suggested that the initial report should refer only to roads following the hydro high tension transmission lines of the Commission at present existing as contemplated in the Niagara power zone, extending throughout Western Ontario and the midland district. It is desired that the report shall cover cost of construction, cost of operation and probable revenue in each case."

Berlin and Waterloo Street Railway Dispute

The town of Waterloo, Ont., brought a suit recently against the neighboring city of Berlin to enforce accounting under an agreement dated Jan. 18, 1910, respecting the operation of the Berlin and Waterloo St. Ry. Chancellor Boyd gave the following judgment Nov. 8: "The agreement as a whole makes provisions for the operation of the street railway between the municipalities, the railway itself being owned and operated by defendants. Clause 20 provides that Berlin shall pay to Waterloo one quarter of the annual net profits earned by the railway, on Jan. 1 of each year. The complaint is that Berlin has wrongly assumed to make deductions from the total profits, 'under the guise of taxes,' and has so reduced the amount properly payable to plaintiff; and also, with like effect, the defendant has charged to maintenance several sums which should have been properly charged to capital, and otherwise has failed fully to account for other profits. A general accounting is asked, with special declarations of liability. The defendant pleads as a matter of law that the court has no jurisdiction. The objection is well taken, and the action should stand dismissed, with costs. This, of course, without prejudice to any further application being made to the Ontario Railway and Municipal Board."

London Street Railway Adheres to Steam Power.

The London (Ont.), Street Ry. has definitely decided not to use Hydro-Electric power, but to increase its present steam plant, and it has bought a 500 k.w. generator direct connected to an Allis cross compound condensing engine. As direct current turbines of such small capacity are still in somewhat of an experimental stage it was considered best to buy the unit above mentioned. The engine is of such a size that a low pressure turbine could be installed at any time to work satisfactorily with it.

Negotiations for the use of hydro-electric

power by the London St. Ry. have been carried on for the past three years. The company installed at considerable expense a graphic recording watt meter showing the exact load conditions. The results obtained by these charts for a whole year were very carefully analyzed and comparisons made as between hydro-electric power and what could be done with steam machinery, the results showing a difference of from \$6,000 to \$8,000 a year in favor of the steam plant. The London St. Ry. condition is somewhat different from that of the Galt, Preston and Hespeler St. Ry., and the London and Lake Erie Ry. and Transportation Co., which have adopted hydro-electric power, inasmuch as the London St. Ry. would have to suffer the loss in conversion from alternating current to direct current. The other roads mentioned already suffered that loss in their own generation of power, and this may explain why they could use hydro power satisfactorily while the London St. Ry. could not.

Order Respecting Winnipeg, Selkirk and Lake Winnipeg Railway.

There has been a long standing dispute between the city of Winnipeg and the Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary of the Winnipeg Electric Ry., respecting the use of a portion of Main street north for freight purposes and the alleged blocking of traffic by the electric railway cars. In June the city applied to the Public Utilities Commissioner, H. A. Robson, in connection with the matter, who has recently issued an order disposing of it, the following being the principal points decided. The interurban company (the Winnipeg, Selkirk and Lake Winnipeg Ry.) is to build a double track line along Main street from the south boundary of Kildonan parish, lot 3, to the city's northerly limit, these tracks to be a continuation of the Winnipeg Electric Ry. After a reasonable time for the construction of these tracks has elapsed the interurban company's present single track is to be removed from the west side of Main street, together with all appurtenances, freight accommodation, etc. The Winnipeg Electric Ry. is always to have the use of the line to be built by the interurban company, on terms to be agreed on. The interurban company is authorized to establish a terminal station on lots 1 to 14, in block 1 and lots 1 to 34 in block 2, of Kildonan parish, lot 4, and to build tracks from its line into the station. The interurban company may use the Winnipeg electric railway tracks on Main and Athol streets, etc., for turning cars, and is to be provided with facilities for receiving and discharging passengers there. The double track to be built by the interurban company is to be used by the Winnipeg Electric Ry., and the same facilities for passengers on Main street in the present city limits shall be afforded north of the former city limits as south of it.

Levis County Railway Report, Etc.

The financial statement for the year ended June 30, presented at the annual meeting recently, showed receipts \$71,523.86; expenses, \$61,424.74; surplus on operation, \$10,099.12. The interest on bonds and compound interest on loans, etc., was \$12,907.13, leaving a profit and loss debit for the year of \$2,808.01. The profit and loss debit at June 30, 1911, was \$32,213.11, making the total debit at June 30, 1912, \$35,021.12.

The officers and directors for the current year are:—President, S. H. Ewing; Vice President, Hon. R. Turner; other directors,

J. A. Richardson, J. Forman, J. C. Blouin, C. E. A. Jones; Secretary-Treasurer, E. A. MacNutt.

Too Late For Classification.

Winnipeg Electric Ry.—Winnipeg press dispatches state that the company has refused the Reese syndicate's offer for the property.

Chatham, Wallaceburg and Lake Erie Ry.—Press reports state that Mackenzie, Mann and Co. interests have obtained an option on this line, which runs from Wallaceburg, Ont., to Erie beach, on Lake Erie, 32.85 miles, with a short branch to Paincourt.

Halifax Electric Tramway Co.—The deal whereby the control of this company passes to E. A. Robert, President, Montreal Tramway Co., and his associates, has been completed, the stock acquired by them having been taken over at 160. The city of Halifax now wants to obtain control, and it is suggested that 170 be offered for the stock, and that if he refused the legislature be asked to authorize expropriation.

London St. Ry.—Gross earnings for Sept., \$29,541.07; expenses, \$17,656.01; net earnings, \$11,885.06; deductions, \$2,371.25; net income, \$9,513.81; for October, gross earnings, \$25,668.78; expenses, \$17,890.65; net earnings, \$7,778.13; deductions, \$2,450; net income, \$5,328.13. Aggregate gross earnings for ten months ended Oct. 31, \$252,775.14; expenses, \$173,831.86; net earnings, \$78,943.28; deductions, \$24,089.75; net income, \$54,853.53.

A Trackless Trolley System, which is said to be the first to be established in Scotland, has recently been placed in operation in Dundee. It is similar in general to other installations which have lately been made in several parts of Great Britain. The cars travel on the highway with a considerable lateral range of motion and obtain their power from overhead wires through two trolley poles, one of them and one wire acting as a return for the current. The cars weigh 3½ tons and accommodate 28 passengers. Two cars are in operation on the Dundee line. The cost of the installation per mile is said to be about one tenth that of an ordinary electric railway system. The principal use of the lines is contemplated to be as feeders to the regular city lines of public conveyance.

The Calgary Municipal Ry. has received three single end, double truck, p.a.y.e. cars from the Preston Car and Coach Co.

The Toronto and York Radial Ry. has received three double end, double truck, p.a.y.e. car bodies from the Preston Car and Coach Co.

The Cape Breton Electric Co. has granted its motormen and conductors the following increases in wages:—First year men from 18c. to 20c. an hour, second year men from 20c. to 21c., third year men from 21c. to 22c., over three years from 22c. to 24c.

The Quebec Ry. Light and Power Co. has granted its motormen and street car conductors an increase of 1½ cents an hour dating from Nov. 1, and an additional 1c. an hour dating from Jan. 1. The question of the recognition of the union and the taking back of discharged employees is being made the subject of an arbitration.

JAMES ANDERSON, General Manager, Sandwich, Windsor & Amherstburg Ry., expects to sail from New York on the s.s. Cedric, Jan. 21, for a trip to the Mediterranean.

The taxpayers of London, Ont., may be asked to vote, Jan. 1, on a bylaw to raise \$890,000 for the electrification of the line to Port Stanley.

Electric Railway Projects, Construction, Betterments, Etc.

The Bowness Improvement Co. is making application to the Alberta Legislature for an act of incorporation empowering it among other things to build railways other than steam in the subdivision of Bowness, near Calgary. Jones, Pescod and Adams, Calgary, are solicitors for applicants.

Berlin and Northern Ry.—The ratepayers have defeated the bylaw, approved by the Berlin, Ont., town council, authorizing a contribution towards the building of a bridge at Bloomingdale in connection with the extension of the company's line. (Oct., pg. 520.)

Brandon Municipal Ry.—The city engineer, reporting to the Brandon, Man., city council, Nov. 1, stated that the track work, so far as projected, was practically finished. A good deal of the overhead work has been got in place, and the remainder would be gone on with during the winter. Nothing has been settled as to the power for operating the line, or the ordering of cars. It is stated that the lines will be put in operation May 1, 1913. (Nov., pg. 573.)

British Columbia Electric Ry.—Two additional extensions of the lines in the vicinity of Vancouver have been placed in operation. The first is in the Fairview section, and the second serves A.L. 472, South Vancouver, and the Sixteenth avenue district.

Plans are being prepared, according to press reports, for a line from Clayburn to Mission City. Arrangements have been made for the survey of a line from New Westminster to Port Moody, and G. R. G. Conway, Acting General Manager, informed the New Westminster city council, Oct. 31, that as soon as the reports were received the company would be in a position to give definite consideration to the question of the desirability of its construction.

A draft agreement for a consolidation of the company's franchises, embodying conditions that have been accepted by the company, has been prepared. The mayor claims that Vancouver is not ready for a consolidation of franchises, but he will not oppose the submission of the agreement to a vote of the ratepayers.

The second unit of the new Jordan river power plant on Vancouver island has been put in operation. The company is now supplying 12,000 h.p. to Victoria, and is completing a 6,000 h.p. plant at Tod inlet. The Jordan river plant is to be doubled immediately.

The new line from Willows to the Uplands section of Cadboro bay, Victoria, was expected to be put in operation Nov. 30. A right of way has been secured for a further extension of the line. (Nov., pg. 573.)

The Vancouver city council, Nov. 8, declined to take up for discussion the report of the special committee on the proposed consolidation of the company's franchise in Vancouver.

Calgary Municipal Ry.—The Calgary, Alta., city council is considering recommendations for the expenditure next year of \$450,000 upon extensions of the municipally owned electric railway. (Nov., pg. 573.)

Chatham, Wallaceburg and Lake Erie Ry.—Press reports state that the directors have plans under consideration for the extension of the line to Sarnia, Ont., on the north and Blenheim on the south. (Jan., pg. 38.)

Eastern Ontario Electric Ry.—Application is being made to the Ontario Legislature to extend the time within which the company may build the lines authorized

by chap. 184 of the statutes of 1909, and to change the provisional directors. (May, 1909, pg. 367.)

Edmonton Interurban Ry.—We are officially advised that the company is building the first section of its projected lines, viz., from Edmonton to St. Albert, Alta., about ten miles. The contractors are pushing the grading ahead as fast as possible so as to have it completed this year. An order for 1,000 tons of steel rails has been placed. In the event of the operation of the line being successful it is expected that arrangements will be made for the building of other branch lines radiating from Edmonton.

It is intended to operate gasoline electric cars on the line, but no orders have yet been placed for cars.

The officers and directors of the company are:—President. G. Barbey, President Franco-Canadian Corporation, Vancouver, B.C.; Vice-President, J. H. Picard, Edmonton; other directors:—M. Kimpe, Edmonton; L. Bureau, Paris, France. (Nov., pg. 573.)

Edmonton Radial Ry.—We are officially advised that the construction of the projected extension of the line to St. Albert, Alta., depends upon a satisfactory arrangement being made between the two corporations. Negotiations are in progress and, if they result satisfactorily, construction will be started in the spring, and the line should be completed and in operation by Jan., 1914. (Nov., pg. 573.)

Farmers Interurban Ry.—Application is being made to the Quebec Legislature for the incorporation of a company with this title to build a railway from Riviere des Prairies to Ste. Anne de Belleville, Que.; and from St. Laurent to St. Jerome, Que., with branch lines; to connect the same with any existing railway, and to operate them by steam, electricity or any other motive power. Loranger, Loranger and Prudhomme, Montreal, are solicitors for applicants.

Halifax Electric Tramway Co.—Press reports state that the new interests in control of the company will spend a considerable sum upon the betterment of the lines. (July, pg. 367.)

Hamilton Radial Ry.—According to press reports the project of building an electric railway round the north shore of the bay from Hamilton to Burlington, Ont., is again under consideration. It is said that the plan involves the utilization of the present line to Burlington as a branch of the Hamilton Street Ry. (June, pg. 308.)

Hamilton Street Ry.—E. P. Coleman, General Manager, is quoted as stating that the company proposed to extend its tracks along Barton street to Kenilworth and on to the Hamilton Radial Ry., near the site of the National Car Co.'s plant. The matter was discussed with the Hamilton city council's committee on street railways, Nov. 1, and it is said that the line will be built as soon as certain legal difficulties are straightened out. (Oct., pg. 520.)

Imperial Traction Co.—Application is being made to the Dominion Parliament for an act to authorize the building of the following additional lines:—From Smithville, in Lincoln county, to Bridgeburg, Welland county, and from Hamilton to Toronto. Harding and Owens, Stratford, Ont., are the solicitors. (June, 1911, pg. 555.)

Kingston, Portsmouth and Cataraqui Electric Ry.—While an understanding has been reached between the company and the Kingston, Ont., city council as to the laying of the new road bed, some further

information is to be secured before the necessary bylaws are prepared for submission to the taxpayers. (Nov., pg. 573.)

London and Northwestern Ry. of Canada.—Press reports from London, Ont., state that this company's charter has been acquired from D. A. Stewart by Canadian Northern Ry. interests. The company has power to build a line from London to Sarnia, with a number of branch lines. (Oct., pg. 520.)

Medicine Hat, Alta.—The terms of the proposed agreement with Sir Max Aitken and associates for a street railway franchise in Medicine Hat have been put into writing, and are being given a final consideration. Representatives of a British financial firm are asking for an opportunity to submit an alternative proposition. (Nov., pg. 573.)

Moncton Tramways, Electricity and Gas Co.—Track is reported laid on the Mountain road extension of the line in Moncton, N.B., as far as the bridge, and the overhead work has been completed. It is expected that the extension will be opened for traffic early in December. (Oct., pg. 520.)

Montreal and Southern Counties Ry.—The Minister of Railways has approved of route map for extension of the line through Greenfield Park municipality, 2.25 miles.

The Montreal city council has granted the company permission to extend its lines in the city across McGill street and along Youville square. It has also granted permission to carry farm produce as freight.

W. B. Powell, Vice-President and General Manager, is reported to have recently stated that it was expected to have the company's line to Richelieu in operation by Nov. 30. The greater part of this 17 miles of line is over the right of way of a section of the Central Vermont Ry., which has been taken over, and this C.V.R. branch will be utilized as far as St. Cesaire for the Granby extension. A new right of way, for the greater distance along the old Montreal road, has been secured from St. Cesaire to Granby. The building of this extension will necessitate the erection of a new four span bridge over the Yamaska river near St. Cesaire. (Nov., pg. 573.)

Montreal Tramways Co.—The new line to Westmount boulevard is reported to have been completed. The Outremont town council has accepted the company's proposition to lay a single track line on Bernard and Outremont streets at once, and to lay a second track thereon at some future time. (Nov., pg. 573.)

Moose Jaw Electric Ry.—A. H. Dion, Superintendent, in an interview, Oct. 31, is reported to have said that two extensions have been completed during this year, the company having now 10 miles of track in operation. The extension to the park had to be abandoned for the present owing to inability to get steel and the scarcity of labor, and the completion of two other extensions under construction would also have to be left over until the spring. An addition is being built to the car barn. The foundations for the new section of the power plant have been completed, and the machinery is in course of delivery. The new unit will be a 500 k.w. one. (July, pg. 368.)

Application is being made by the company to the Saskatchewan Legislature for power to extend its lines outside the city of Moose Jaw, subject to agreements being made with the various municipalities, and to increase its capital from \$500,000 to \$1,000,000.

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners

from Welland avenue to the Welland canal has approved of location plan of the line crossing in St. Catharines, Ont., 0.75 miles. This is the final section of the extension to Niagara-on-the-Lake. The right of way has been acquired for nearly the whole distance, and it is expected that construction will be started at an early date.

Application is being made to the Dominion Parliament for an act extending the time within which the company may build the lines authorized to be built by paragraphs b, c and d, sec. one, chap. 132 of the statutes of 1906, and by sec. eight, chap. 77 of the statutes of 1899. (Nov., pg. 574.)

We are officially advised that no statement can at present be made regarding the time when construction will be started on the new line from St. Catharines to Niagara-on-the-Lake, right of way matters not having been settled.

Nipissing Central Ry.—The final inspection of the extension of the line from Haileybury to Liskeard, Ont., was made by the Temiskaming and Northern Ontario Ry. Commissioners, Oct. 23, when a special car was run over the line. A regular car service was placed in operation Nov. 1. (Nov., pg. 574.)

Ottawa and St. Lawrence Electric Ry.—Press reports state that surveys are practically completed for the line between Ottawa and Morrisburg, Ont., and that the contractors are preparing to start work next spring. The contract is said to call for the completion of 50 miles by the spring of 1914. (Nov., pg. 574.)

Owen Sound, Ont.—Mayor Lemon is quoted as stating that negotiations are in progress for the construction of an electric railway in the town, and that a definite proposal will be submitted to the council at an early date. (Feb., pg. 91.)

St. John Ry.—Application has been made to the St. John, N.B., city council for authority to lay out turn-ins to the new car shed on Wentworth street.

Tenders are being received to Dec. 2 by the Provincial Government for the construction of a new bridge at the reversible falls. The bridge will have a total length of 730 ft., and will have two sets of tracks for the electric railway. (Nov., pg. 574.)

Saskatoon Municipal Ry.—We are officially advised that the building of this railway is being supervised for the Stone and Webster Engineering Corporation of Boston, Mass., which is financing the work for the city council, by J. B. Townsend, the city commissioners being in charge for the city.

The car barn is of brick, 163 by 94 ft. The foundation walls, column fittings, pits and floors are concrete. There are three intermediate lines of wooden posts, and the wooden roof is covered with tar and gravel. One of the longitudinal bays is given over to office room, employes rooms, shops, etc., while the remainder of car barn is devoted to tracks. There are three pits about 70 ft. long, and a paint shop 23 by 40 ft. The windows all around the walls, skylights and ventilators give plenty of light and air. An efficient heating layout is being installed to insure the inside temperature against the severe winter weather. The power station is to be equipped with two 300 k.w. generator sets, which have been ordered from the Canadian Westinghouse Co.

The city has under consideration the question of the appointment of a manager. (Nov., pg. 574.)

Stratford Ry.—A new bylaw for an electric railway franchise was practically agreed upon at a meeting of the Stratford, Ont., city council, Oct. 31. This bylaw, it is

expected, will be finally completed for submission to the taxpayers at the election, Jan. 1, 1913. (Nov., pg. 574.)

Taber, Alta.—Preliminary surveys have been made for an electric railway to connect Taber, Alta., with the various coal mining camps in the vicinity, and it is reported that applications will shortly be made to the town for a franchise, and to the Legislature for a charter incorporating a company to build the line. Calgary men are reported to be interested.

Toronto Civic Car Lines.—The Toronto city council has authorized the purchase of the necessary rolling stock and equipment for the civic car line on Gerrard street east, and to inaugurate a service thereon at the earliest possible moment. This was decided upon after a suggestion by the General Manager of the Toronto Ry. for the operation of the lines had been mentioned. This suggestion came through a special committee which had been authorized to see him. The suggestion was a tentative one, and was to the effect that the city pay the company 20 cents a car mile for the operation of cars over the line, the line to be operated in conjunction with the company's line. (July, pg. 368.)

Toronto Eastern Ry.—The Minister of Railways has approved of route map for the line from Pickering, Ont., westerly for 12 miles. The route originally surveyed ran from Pickering to a junction with the Canadian Northern Ontario Ry., near Cherrywood. The new route runs south-westerly from Pickering, crossing the G.T.R., and going on to the crossing of the Kingston road west of West Hill. (Oct., pg. 521.)

Toronto Suburban Ry.—The right of way for the line is reported to have been secured from Meadowvale to Guelph, Ont., with but few small exceptions. Some grading is reported to have been done on this section. On the Maher subcontract, the grading is practically completed from west of Islington to Summerville, and is now in progress from Islington easterly to Lambton. (Nov., pg. 574.)

Winnipeg Electric Ry.—Work on the double tracking of the Main street line from the southern boundary of parish lot 3, Kildonan, to the present northern limits of Winnipeg is being rushed. At the end of the extension of double track, new terminals for the Winnipeg, Selkirk and Lake Winnipeg Ry. will be laid out on a site recently acquired. The extension on Mountain avenue has been completed. A franchise has been granted the company for the construction of an electric railway in St. Vibal. (Nov., pg. 575.)

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Sept., \$559,486; operating expenses, \$345,366; net operating earnings, \$214,120; renewal funds, \$51,620; net earnings, \$162,500; approximate income from investments, \$35,000; net income, \$197,500, against \$453,391 gross earnings; \$282,443 operating expenses; \$170,948 net operating earnings; \$37,935 renewal funds; \$133,013 net earnings; \$25,000 approximate income from investments; \$158,013 net income for Sept., 1911. Aggregate gross earnings for three months ended Sept. 30, \$1,651,474, net earnings, \$579,342, against \$1,299,241 aggregate gross earnings; \$441,138 net earnings, for same period 1911.

Calgary Municipal Ry.—Revenue for September, \$59,956.25 against \$34,204.35 for Sept., 1911. Net earnings, \$13,056.62 against \$7,095.24 in 1911. Passengers carried, 1,433,067 against 818,969.

Cape Breton Electric Co.—Gross earnings for Sept., \$34,363.62; operating expenses and taxes, \$15,777.26; net earnings, \$18,586.36; interest charges, \$4,495.84; balance, \$14,090.52; sinking and improvement funds, \$1,206.66; balance for reserves, etc., \$12,883.36, against \$30,314.16 gross earnings; \$14,976.26 operating expenses and taxes; \$15,337.90 net earnings; \$4,512.50 interest charges; \$10,825.40 balance; \$1,140 sinking and improvement funds; \$9,685.40 balance for reserves, etc., for Sept., 1911. Construction charges for month, \$6,087.39.

Hamilton Street Ry.—It was reported to the Hamilton, Ont., city council, Nov. 1, that the total receipts of the street railway for the three months ended Sept. 30 were \$150,144.49, compared with \$130,758.93 for the corresponding three months of 1911. The city's rental and percentage were \$12,011.58.

Kingston, Portsmouth and Cataract Electric Ry.—At a meeting of the Kingston, Ont., city council, Nov. 14, it was decided to ask the company if it was willing to sell its line to the city.

Lethbridge Municipal Ry.—Receipts for Oct., \$7,034.24; passengers carried, 159,140.

Port Arthur and Fort William Electric Ry.—Passenger earnings for Sept., \$21,411.02; Arthur street line, \$910.01; baggage and miscellaneous earnings, \$948.45; total earnings, \$23,269.48; operating expenses, \$12,401.59; net earnings, \$10,867.89. Car mileage, 101,515; gross earnings per car mile, 22.921 cents; operating expenses per car mile, 12.216 cents; net earnings per car mile, 10.704 cents.

Quebec Ry., Light, Heat and Power Co.—A recent cable from Paris, France, states that the French Association of Foreign Bondholders has formed a committee of defence for the bondholders of the company resident in France.

Toronto Ry., Toronto and York Radial Ry., Etc.—Gross earnings for Sept., \$767,944; operating expenses, maintenance, etc., \$404,171; net earnings, \$363,773, against \$705,961 gross earnings; \$309,706 operating expenses, maintenance, etc.; \$396,255 net earnings, for Sept., 1911. Aggregate gross earnings for nine months ended Sept. 30, \$6,221,043; net earnings, \$3,185,100, against \$5,559,647 aggregate gross earnings, \$2,886,405 net earnings, for same period, 1911.

Winnipeg Electric Ry.—Gross earnings for Sept., \$309,722; operating expenses, \$162,870; net earnings, \$146,852, against \$321,664 gross earnings; \$146,140 operating expenses; \$175,524 net earnings, for Sept., 1911. Aggregate gross earnings for nine months ended Sept. 30, \$2,737,552, net earnings, \$1,280,748, against \$2,825,637 aggregate gross earnings; \$7,433,507 net earnings, for same period 1911.

Electric Railway Notes.

The British Columbia Electric Ry. Co. has ordered five 50 ton electric locomotives from the Westinghouse Electric & Manufacturing Co., to be equipped with four 308B-3 motors and H.B. control.

The Sandwich, Windsor and Amherstburg Ry., which is about to increase its power house equipment, has ordered a 1,250 h.p. engine and 800 k.w. railway generator from Allis-Chalmers Co., Milwaukee, Wis., to be delivered in March, 1913.

The Guelph (Ont.) Radial Ry. received recently from the Preston Car & Coach Co. a single truck snow sweeper, double end operation, with 33 in. brooms, an illustration of which appears in this issue. It has standard steel underframe and steel tired wheels. The motor equipment consists of two Westinghouse 101B2 motors with K10

controllers, and one 101B motor with K10 controller to operate the brooms.

The St. John (N.B.) Ry. has received two additional pay-as-you-enter cars.

The Ottawa Electric Ry. is said to be preparing plans for a car house on Cobourg street, to cost about \$25,000.

The Kingston, Ont., city council is negotiating for the purchase of the Kingston, Portsmouth and Cataraqui Electric Ry.

The British Columbia Electric Ry. has received ten of the 22 passenger cars recently ordered in the United States.

Four new cars were put in operation on

Loading Electric Cars at Ottawa Car Company's Plant.

This plant is located in the centre of the city of Ottawa, away from the steam railway lines, and in consequence has no siding for the loading of the finished street cars on to flat cars for transshipment to their destination. The Ottawa Car Co. and the Ottawa Electric Ry. Co. are in close touch with each other, and have come to an agreement whereby the latter company's tracks, which pass the rear door of the car plant,

tion over the car on which each body is to be placed.

The body is raised from the trucks and lowered on the car top by the means illustrated in the accompanying illustration. On each side of each end of the car body there are placed jacks of a peculiar design, carrying a cross bar between each end pair, which is run up under the car body sills. The jacks consist of a wooden base with two wooden uprights, between which there is carried a square threaded screw in a bearing about half way up the vertical supports. The top of the screw carries a cross-head, guided between the uprights. The screw supporting bearing carries an engaging nut, the outside of which is a bevel gear pinion. A horizontal shaft carries a mating bevel pinion. The outer end of the horizontal shaft carries a double lever by which the screw is raised or lowered. The very design speaks for a powerful lifting jack.

By these four jacks the car body is raised off the trucks, so that the latter clear. The trucks are then run from out under the car, and the temporary rail on the top of the car removed. Timbers of the form shown in the foreground in the illustration are then secured to the flat car, and the street car body lowered into the cradle thus formed. This jack arrangement is very convenient for loading car bodies.

Double End, Single Truck Snow Sweeper, for Guelph Radial Railway.

the Hamilton (Ont.) St. Ry., Nov. 13. They are each 21 ft. long, and replace the old 16 ft. cars.

The Toronto Railway's revenue for October was \$480,942.37, against \$419,004.75 in 1911. The city's percentage this year was \$38,475.39.

A. Sturgeon, a Toronto Ry. motorman, was recently fined \$50 and costs or 60 days' imprisonment, by the police magistrate, for driving a car while intoxicated.

The Montreal city council has put in force a new traffic bylaw under which the street railway bylaw 210 will be enforced by the policemen at street intersections.

The Moose Jaw Electric Ry. has in service 12 cars, and there are being built by the Ottawa Car Co., for 1913 delivery, four double truck cars and several single truck cars.

C. L. Case, A.M. Can. Soc. C.E., read a paper on the Sherbrooke Ry. and Power Co.'s hydro electric plant at Sherbrooke, Que., before the Canadian Society of Civil Engineers recently.

The Nipissing Central Ry. was bought about a year ago by the Timiskaming and Northern Ontario Ry. Commission for \$250,000. The net earnings from Nov. 1, 1911, to June 30, 1912, were \$13,488, or over.

The Halifax city council has been discussing the advisability of offering E. A. Robert, President, Montreal Tramways Co., and his associates \$170 a share for the controlling interest in the Halifax Electric Tramway Co., which they bought at \$160 a share recently.

Arrangements are being made to have a vote taken in London, Ont., on the question of permitting the operation of a car service in the city on Sundays. Owing to the recent annexation of additional territory the city now has more than the 50,000 population required.

A club for the British Columbia Electric Ry.'s office staff was opened, Nov. 1, by G. R. G. Conway, Acting General Manager. The space devoted to the club is 80 by 60 ft., and is divided into three rooms, one for social gatherings, one for reading and games, and the other a billiard room.

are used for the moving of the cars to the siding where they can be transhipped.

The cars to be shipped are provided with temporary trucks, used specially for that purpose, saving the appearance of the regular trucks, which are taken to the shipping point by different means. The car bodies, mounted on the special tracks, are hauled to a siding where all shipments are made.

Method of Loading Electric Car Bodies for Shipment.

On the end of the siding track there is a ramp leading up from the street level, carrying tracks connecting with the street car line. This ramp rises to the level of the top of the flat car. On the top of the string of flat cars backed into the siding for the shipment there is laid a pair of light rails, spiked to the car top, connecting at the ramp end with the ramp rails. Up this ramp and along the car tops the car bodies on the temporary tracks are run into posi-

The London St. Ry., at the end of October, voluntarily increased its motormen and conductors' wages as follows:—Spare men from 16c. to 18c. an hour; for remainder of 1st year's service from 18c. to 20c.; 2nd year's service, from 19c. to 21c.; 3rd year's service, from 19c. to 22c.; 4th year and thereafter, from 22c. to 23c.

The Toronto Railway's Employees Union is petitioning the city council to place restrictions upon the strength of lights used on automobiles, contending that the strong lights dazzle conductors, make it difficult to see pedestrians and vehicles, and cause accidents.

The British Columbia Electric Ry. Co. is reported to have commissioned Somerville and Putnam, Vancouver, to prepare plans for a group of car houses to be built near False creek, Vancouver, to cost about \$250,000.

A storage battery train of three cars has been built for the United Railways, of Havana, Cuba, for use on a seven mile suburban line where two or three car trains are needed during a certain few hours.

Marine Department.

Wireless Telegraphy on the Great Lakes.

The Dominion government has, during this year, had three wireless telegraph stations erected on the upper lakes, at Midland, Tobermory and Sault Ste. Marie, Ont., the Marconi Wireless Telegraph Co. of Canada, Ltd., being the contractors. These stations will work in conjunction with the one at Port Arthur, Ont., erected in Dec., 1910, by the Marconi Co., and now to be taken

stations is intended are:—(1) To aid navigation by enabling the masters of steamboats to communicate with the shore, their owners or agents and the ports which they have left or to which they are destined; (2) To provide similar facilities for passengers; (3) To provide direct communication between the points where shipping interests are centred without necessitating

when they are in close proximity to shore, leaving it, making a port, entering canals or narrow straits, and under other similar circumstances which occur very frequently with great lakes vessels. It must also be remembered that the larger of the great lakes are at certain seasons subject to exceedingly stormy weather, fogs, ice and cold, just as much as the oceans, and at

Wireless Telegraph Station at Midland.

Wireless Telegraph Station at Tobermory.

over by the government. A station at Sarnia is in course of construction, and other stations are to be built at Port Stanley, Port Colborne, Toronto and Kingston, Ont., which will also work in connection with the existing stations.

The erection of these stations on the great lakes is a continuation of the system

the use of the more circuitous routes of the land line telegraph for communication between these points.

The places that have been chosen on the great lakes will show at once how these interests have been considered. By the opening of navigation in 1913 all the main shipping points in the upper lakes, viz.,

such seasons constant communication with land or passing steamers is very acceptable.

EQUIPMENT OF STATIONS.—Each station requires a piece of land about 650 by 150 ft. There are erected two wooden masts, each 185 ft. high and 450 ft. apart. They are built in three sections, supported

Wireless Telegraph Station at Sault Ste. Marie.

Transmitting Machinery at Sault Ste. Marie.

of wireless telegraph stations in connection with the great waterways of Canada which was commenced in 1904 in the Straits of Belle Isle and at Cape Race, Newfoundland, and has been completed as far as Montreal. The great lakes branch, when completed, will also connect with Montreal.

The main uses for which this system of

Midland and Victoria Harbor, Sarnia, Sault Ste. Marie and Port Arthur, will be in direct communication with one another by wireless.

The necessity for stations on the great lakes, for their primary function, might be questioned by those unacquainted with the conditions. Steamboats probably find the greatest usefulness in wireless telegraphy

by a steel guy, and are 22 ins. in diameter at the bottom and 9 ins. at the top.

Each station is provided with two buildings, one double house containing two dwellings, and one station house separated from the dwelling house by about 50 ft. The dwelling houses provide accommodation for three men and have been made very comfortable. The station house is divided

into engine and transmitting room, operating room and office. All buildings are of wood with concrete foundations.

TRANSMITTING MACHINERY.—A standard type of transmitter is being installed at all the great lakes stations. It consists of a 10 h.p. 3 phase, 550 volt standard induction motor, worked by public power supply. The motor is directly connected through a flexible coupling to a special a.c. generator, generating a.c. at

solely for communication with other great lakes stations.

The aerial wires are stretched between the two masts and are of phosphor bronze wire 42/23 B. & S. gauge. They are supported by four strain insulators designed for a mechanical load of 1,500 lbs. and to withstand an electrical voltage of 100,000 volts, wet or dry.

The transmitting apparatus is completely duplicated at all stations. Where a public

receiving apparatus on the table, the switchboard completely controls the transmitting apparatus and can be manipulated by the operator without rising from his chair.

The Midland station is situated at the southeast corner of Georgian bay, half way between Midland and Victoria Harbor, both important transportation centres, and is in telephonic communication with both places. It is also connected direct with

Engine and Transmitter at Tobermory.

Transmitting Machinery at Tobermory.

440 volts and 240 cycles, and a spark discharger is attached to the a.c. generator and consists of an insulating disc attached to the generator shaft and rotating inside a muffler. It has 16 copper studs fixed radially in a copper rim (16 is the number of poles of the a.c. generator). Fixed in the muffler and insulated from it are two fixed electrodes adjustable radially and coming opposite to any two adjacent rotating disc studs; these fixed electrodes form the terminals of the spark gap and it is between their inner extremities and the points of the rotating studs that the spark occurs each time the latter come into a position exactly opposite the fixed electrodes. The fixed electrodes can also be adjusted in an angular direction. This adjustment allows their position to be fixed so that the spark always occurs in a certain position relative to the a.c. generator pole pieces, and therefore relative to the curve of the impressed e.m.f. of the generator. It is arranged that this point shall be that point in each alternation at which the condenser, which forms an important part of the transmitter, has been charged to maximum voltage. All these complications in the design are necessary to enable the spark to be obtained absolutely free from arcing and giving a pure musical note. The vibration per second of the musical note is twice the a.c. generator frequency, in this case equal to 480 per second. The note is about equal to middle C on the piano. The remainder of the transmitter is of regular design consisting of a transformer for 240 cycle a.c. and specially constructed with regard to transformation ratio and magnetic leakage; various high and low tension adjusting and protective chokers and glass plate condenser capable of withstanding a voltage of 50,000 volts, and of a capacity of .06 m.f., high frequency primary and secondary inductances, and oscillation transformer. The transmitter is capable of emitting oscillations of any wave length between 600 and 1,700 metres, but is specially adjusted for wave lengths of 600 metres and 1,600 metres, the former being the standard wave length for ship communication and the latter being

power supply is used one 8 h.p. Canadian Fairbanks-Morse special electric horizontal gasoline engine is installed to provide motive power in case of breakdown of the electric power supply. Where no public power supply is used and the engine is the main motive power, the engine is

the land line telegraph system.

The Tobermory station is situated on Cape Hurd, at the junction of Georgian bay and Lake Huron and commands the whole of Lake Huron.

The Sault Ste. Marie, Ont., station is situated quite close to that town, and is in telephonic communication with the town and the Canadian canal offices, and is also to be connected to the C.P.R. telegraph system.

At Port Arthur preliminary preparation for converting it into a regular standard station have been commenced. This will entail considerable enlargement, and is necessary to enable the station to communicate with Sault Ste. Marie. The Port Arthur station has for two seasons maintained a service with steamboats; it is in telephonic communication with Port Arthur and Fort William, and is connected with the C.P.R. land line telegraph system.

As is well known, different climates offer conditions favorable or adverse to wireless telegraphy and these conditions influence the design of the station. Present experience shows the climate of the great lakes to be particularly favorable to wireless telegraphy in winter, but somewhat adverse to it during summer. During the latter season electrical disturbances are frequent, and these are always accompanied by disturbances to wireless telegraph receivers. In telephonic reception these disturbances evidence themselves by scratching and dull toned noises in the telephone, and it is when these electrical disturbances exist that the pure toned note of the transmitters installed on the great lakes is particularly advantageous. The same note is communicated to the telephone receiver and can be easily distinguished by the operator from the dull noise caused by the atmospheric disturbances.

EQUIPMENTS ON STEAMBOATS.—Now that the land facilities are being provided Canadian steamship owners on the great lakes have commenced to equip their vessels with wireless telegraphy. Up to the present 11 Canadian steamboats are operating it. These are:—

Canadian Pacific Ry.—Alberta, Keewatin,

Receiving Apparatus and Switchboard at Sault Ste. Marie.

duplicated with the remainder of the transmitting gear. The only station of this latter type is at Tobermory.

The receiving apparatus is contained in a room entirely separate from the transmitters and consists of the Marconi type of valve receiver, with tuning apparatus capable of receiving similar wave lengths to those transmitted by each station, and the Marconi magnetic receiver is also installed as an emergency or duplicate. The accompanying illustration of the receiving room shows the operator's chair, with the

Northern Navigation Co.—Huron, Hamonic, Saronic.

Canadian Towing and Wrecking Co.—Barges Imperial, Empire, Provence.

It is expected that during this winter there will be considerable activity in the fitting of other Canadian great lakes steamboats with wireless telegraphy. A large number of these vessels trade with United States ports, and the legislation with which the U.S. followed up the Titanic disaster makes equipment with wireless telegraphy compulsory with all vessels trading in U.S. ports. This legislation for the great lakes comes into effect on April 1 next, and requires all vessels carrying over 50 people to have a correctly licensed and operated installation. Full particulars of it are contained in a circular, "Regulations for radio apparatus and operators on steamers," issued by the Commerce and Labor Department at Washington, D.C., Sept. 5.

Since the foregoing article was written it has been announced that the contract between the Dominion government and the Marconi Wireless Telegraph Co. of Canada provides for the operation of nine wireless stations on the great lakes, four of which are in operation, one under construction, and the remaining four to be commenced probably next year. As soon as all these stations have been completed the company will be in receipt of a subsidy of \$31,500 a year from the government for the operation of all the stations. The agreement is said to be for 19 years.

An interim report has been submitted to the Dominion government by Professor Barnes, of McGill University, Montreal, on his investigations of methods whereby ships may be warned of the nearness of ice or land. It is said that a government vessel will be placed at his disposal next spring to enable him to continue his investigations and experiments.

Notwithstanding earlier reports that the Dominion Government steamship Minto had found ice conditions so unfavorable at Wolstenholme, in the Hudson straits, that she had returned to winter in Hudson bay, she arrived in Halifax Nov. 11. Capt. Anderson is reported to have stated that the conditions for navigating the straits could not have been better.

The Canadian Interlake Line's Vessel Fordonian

This vessel, which has been built recently at Port Glasgow, Scotland, has been referred to in several recent issues of Canadian Railway and Marine World. The following additional particulars have been received:—

The vessel is 2,368 gross tons. The leading dimensions are:—Length, 250 ft.; beam, 42½ ft.; depth, 26½ ft. She has been built to Lloyd's highest class for the grain carrying trade of the great lakes. The propelling machinery consists of a four cylinder set of the Diesel two stroke cycle engine. The engines are placed right aft, and the exhaust, after passing through a silencer, is led overboard under the counter. The cylinder dimensions are 18½ in. in diameter, with a 32¼ in. stroke. The main features are the standard marine frames for the cylinders, with the open and accessible crank case, marine connecting rods, cross heads, and built up crank shaft. The scavenging pumps are driven by links off the cross heads. The pumps are double acting, of 27½ in. diameter, and 23½ in. stroke. The main engines develop 750 brake horse power at a nominal speed of 120 revolutions a minute. Compressed air is supplied by compressor. One is driven off the forward end of the main engine crank shaft, while the auxiliary set is steam driven. The steam for this and for the steering gear, winches and capstans is generated in an oil fired donkey boiler on deck.

With Diesel engines it has become regular practice to test the engine against the brake for some time in the shop prior to installing it in the ship in order to make minor adjustments more readily, as brake horse power, fuel and water consumptions can be measured for guidance. With the engines of the Fordonian this was not possible, and yet, although the engines had only run for short periods, totalling 12 hours, on dock trials, the results of the trial trip on Sept. 21 were entirely satisfactory, demonstrating the state of efficiency for marine propulsion to which this type of prime mover has so quickly been brought.

A speed of 10 knots was exceeded, which

is better than the rate achieved with single screw ships of the same type having steam engines of 950 i.h.p. The revolutions were 120 a minute, and the manoeuvring, stopping, starting, and reversing corresponded exactly to those which would be required in passing through a series of locks. Sixty-three reversals were accomplished in 42 minutes, and at the end of this trial more than half of the stored compressed air was still available. The steam driven air compressor was, of course, running. Complete reversal from full speed ahead to full speed astern occupied six seconds, and the engines were stopped dead from full speed in three revolutions. Although a fairly heavy fly wheel is fitted, the slowest speed at which the engine turned when all cylinders were firing was 46; but when final tuning up has been done, and all fuel valves are so adjusted that each cylinder is receiving exactly the same quantity of oil, 35 revolutions a minute will be the minimum working speed on fuel. The running of the engine was very silent; the engine room is 33% shorter than would be the case for steam machinery; the fuel consumption was 0.47 lb. per brake horse power per hour throughout the trial; the engine room was free from smoke and vapour, and was cool.

Press reports state that as a result of the investigation of the loss of the s.s. Key-storm, E. Adams, chairman of the Board of Inspectors of Steam Vessels, has resigned, and that the Minister of Marine is taking steps to put the matter of inspection, and of the enforcement of the navigation laws, upon a more rigorous basis.

The shipbuilding now in progress in the yards of Great Britain and Ireland exceeds all previous records. The total number of vessels in progress is 587, representing a total tonnage of 2,341,367 tons. This is an increase of 25% over the tonnage under construction a year ago. Ship yards are experiencing difficulty in getting workmen enough to keep pace with the demand, and many yards are working overtime and double shifts. Not only is the activity in shipbuilding unprecedented, but the prospects of future activity are promising. Orders for new vessels are being received faster than the completed vessels are turned out of the yards.

Harbor Improvements at Fort William.

A large amount of work has been done at Fort William harbor during this year, and it is claimed that this amounts to 27% of all the harbor work done in Canada this year. Unconfirmed reports say that the following work will be gone on with next year:—

A series of eight slips, 1,000 by 500 ft., on the south side of the Kaministiquia river between the Mission river and the Grand Trunk Pacific Ry. bridge. The slips will be on G.T.P.R. property, and are to be dredged out to permit of additional water frontage and constitute a part of a scheme of increased freight docks and other facilities which the G.T.P.R. has in hand.

Island One on C.P.R. property, according to government reports, is to be improved by the addition of seven new slips near the mouth of the Kaministiquia river.

Twenty-five acres are to be dredged and removed out of the Kaministiquia river almost immediately opposite the Canadian Car and Foundry Co.'s plant near the western limits of the city. By this means the river will be straightened and a turning basin over 1,000 ft. wide will be formed. The natural depth of the river at this point is 35 ft., and the dredging to be done will be uniform with this depth. It is also said that dredging is to be continued for some distance beyond the city limits.

Panama Canal Tolls.

The United States President has fixed the following tolls for vessels using the Panama canal:—

On merchant vessels carrying passengers or cargo, \$1.20 per net vessel ton—each 100 cu. ft.—of actual earning capacity.

On vessels in ballast without passengers or cargo, 40% less than the rate of tolls for vessels with passengers or cargo.

Upon naval vessels, other than transports, colliers, hospital ships and supply ships, 50 cents per displacement ton.

Upon army and navy transports, colliers, hospital ships and supply ships, \$1.20 per net ton, the vessels to be measured by the same rules as are employed in determining the net tonnage of merchant vessels.

Under the legislation enacted by Congress United States coastwise shipping will be exempted from tolls.

Extension of Lighting Period on Great Lakes.

The Marine Department has issued the following notice:—

All Canadian lights and fog alarms in Lake Superior will be kept in operation this autumn until Dec. 15, or later if the season of navigation will permit, with the exception of Caribou island, Otter island, Michi-

picoten island, Gargantua, Michipicoten harbor, and Corbeil point lights, from which stations the keepers may be removed at any time after Dec. 1. Mariners must not rely on finding any of these lights in operation later than the dates above specified for closing.

All Canadian lights and fog alarms in Lake Huron, Georgian bay, Lake St. Clair, Lake Erie, Lake Ontario, and connecting waters will be kept in operation until Dec. 15, except Southeast shoal lightship, Lake Erie, which may be removed from her station not earlier than Dec. 5; and also Lonely island light in Georgian bay, which may be closed and the keeper taken ashore on Dec. 5.

Vessels Removed From the Register.

The following vessels were removed from the register during September for the reasons assigned:—

STEAM.—Arlington, Toronto, 16 tons, burnt; Arthur Mack, Port Stanley, Ont., 46 tons, broken up; Chumney, Ottawa, 4 tons, broken up; Emma, Toronto, 94 tons, burnt; J. L. Beckwith, Sault Ste. Marie, Ont., 33 tons, wrecked; Scotia, Port Stanley, Ont., 9 tons, broken up; Shawanaga, Toronto, 65 tons, broken up; William Hackett, Quebec, 86 tons, lost; Wobun, Picton, N.S., 990 tons, sold to Dutch subjects.

SAILING.—Amanda, Yarmouth, N.S., 15 tons, broken up; Fannie W. Freeman, Shel-

burne, N.S., 79 tons, transferred to St. Johns, Nfld.; Little Annie, Weymouth, N.S., 16 tons, broken up; Swallow, St. John, N.B., 90 tons, broken up.

The following vessels were removed from the register during October:—

STEAM:—Alert, Vancouver, 8 tons, broken up; Corinthia, St. John, N.B., 39 tons, sold to foreigners; Damara, Vancouver, 3,219 tons, sold to foreigners; Ella

off until the spring tides, commencing Nov. 24, which will be at the highest about Nov. 26. Divers have examined the hull in order to ascertain the damage, and all the cargo possible has been lightered.

D. B. Hanna, Second Vice President, is reported as stating that the vessel was insured for \$1,275,000, while the cost of replacing her would be from \$1,700,000 to \$2,000,000. The floating dry dock at Mont-

Atlantic and Pacific Ocean Marine.

Capt. Wylie, for many years a commander on the Allan Line, died in London, Eng., Oct. 31.

The Canada Line, press reports state, has under construction two 13,000 tons steamships for next year's traffic between Montreal and Liverpool.

Unconfirmed press reports state that a steamship service is to be established in the fall of 1913 by the G.T.R. between a Canadian port and Antwerp.

The C.P.R. has arranged that its trans-Atlantic steamers will, during the current winter season, make 11 more sailings from St. John, N.B., than last season.

During this year's navigation to Oct. 31 there arrived at Montreal 655 vessels of 2,141,053 tons from the ocean, against 694 vessels of 2,116,275 tons during 1911.

Herr Ballin, director of the Hamburg-American Line, was in Montreal, Oct. 31, discussing arrangements for an extension of that company's sailings to Canadian ports.

The Shipping Federation of Canada proposes to ask the Dominion Government to appoint a commission to investigate the pilotage system between Father Point and Quebec.

It is reported that Capt. Beetham of the C.P.R. s.s. Empress of India will be appointed to the command of the new s.s. Empress of Russia, which will be put on the Vancouver-Japan-China route early in 1913.

The steamship Keshrel, which has been sold out of the Dominion Government service, is being fitted up at Victoria, B.C., to be put on a run from Fanning island, the midocean station of the Pacific cable, to Honolulu.

During October 53 ocean going steamships of 382,658 tons arrived in Montreal. Only one of these was a tramp, which was, however, consigned to the Elder-Dempster Co. The Allan Line, with 12 steamships of 111,919 tons, headed the list.

During the six months ended Sept. 30, the number of vessels arriving at and departing from Victoria, B.C., in the ocean trade was 1,957. During October 168 vessels of 198,256 tons arrived, and 199 vessels of 182,038 tons sailed from the port.

The Allan Line s.s. Powerman has arrived in St. Johns, Nfld., after having undergone a thorough overhauling. The passenger accommodation has been increased and modernized, the vessel now providing for 70 saloon and 160 steerage passengers.

The Thomson Line s.s. Bellona ran aground in the Upper Traverse below Quebec, Oct. 31. Shortly after the grounding Capt. Cunningham had a paralytic seizure and was removed to the hospital at Quebec, Nov. 2. The stranded vessel was floated Nov. 5, and reached Quebec Nov. 6.

The New Zealand Shipping Co. has declared a dividend of 15s. a share on the operations of 1911-12, after placing £30,000 to the credit of the insurance fund, and carrying £21,555 forward to the current account. The company has acquired the Australian business of Houlder Bros. and Co.

News was received in Montreal Nov. 13 of the death in England of Capt. Jas. Wylie, who retired from the Allan Line service in 1888. When 21 years of age he was in command of the Allan Co.'s ship Albion, and commanded in succession the steamships added to the fleet until his retirement.

Capt. Morrisby was the recipient of several presents, Oct. 25, on relinquishing

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1912:

and Jennie, St. Andrews, N.B., 25 tons, sunk in collision; Hope, St. John, N.B., 162 tons, broken up.

SAILING:—Arizona, Yarmouth, N.S., 85 tons, stranded; Ethel, Yarmouth, 93 tons, abandoned at sea; H. C. Corson, Sydney, N.S., 38 tons, burnt; Monica A. Thomas, Halifax, N.S., 46 tons, burnt; Nina S., Halifax, 19 tons, burnt; Recruit, Toronto, 297 tons, broken up; Venture, Charlotte-town, P.E.I., 43 tons, wrecked.

The Running Aground of the s.s. Royal George.

The s.s. Royal George, owned by the Canadian Northern Steamships, Ltd., while making her last trip to Quebec for the season, ran aground about a mile east of Point St. Lawrence, Isle of Orleans, on Nov. 5, at 5.10 p.m. It was high tide at the time, and although there was a thin fog, the vessel is said to have been running from 16 to 18 knots an hour, with the view of making port the same evening. The grounding took place on the north shore of the south channel, and the receding tide soon left the vessel in such a condition that the tugs and other steamboats which went to her aid were unable to get close enough to render any practical help. At low tide there was only 6 ft. of water over the rocks, and as the vessel is 60 ft. from keel to boat deck, her position was regarded as precarious. The Quebec and Levis Ferry Co.'s steamboat North took off about 400 of the passengers early on the morning of Nov. 6. A severe storm which came up, with a hurricane wind, prevented the remainder of the 901 passengers being taken off until the morning of Nov. 8. Lighters were requisitioned to take off baggage and cargo. With the passing of the spring tides the hopes of towing the vessel off had to be given up, and on Nov. 11 the company announced its intention of abandoning her to the underwriters, this being done as a precautionary measure. As this is being written (Nov. 15) it is not likely that any attempts will be made to haul the vessel

real is ready to receive the vessel, and the Vickers Co. is prepared to make all the repairs necessary.

The Royal George was built by the Fairfield Shipbuilding Co., Glasgow, Scotland, in 1907, for the Mediterranean traffic, and was then known as the Heliopolis. With her sister ship as the Cairo she was bought by the Canadian Northern Steamships, Ltd., and partially rebuilt for the trans Atlantic trade, for which they are eminently adapted and have become exceedingly popular on account of their speed and excellence of accommodation. Her dimensions are:—Length, 545 ft.; beam, 60 ft. 3 ins.; depth, to shelter deck, 38 ft.; tonnage, 11,000. The machinery consists of three sets of compound steam turbines, one h.p. turbine in the centre, and a l.p. turbine on either side, having a collective power of 18,000 i.h.p., at 340 shaft revolutions. The vessels developed 21 knots an hour on their trial trips, and in actual service have maintained 19 knots an hour. A full description of the vessels as rebuilt was given in Canadian Railway and Marine World for April, 1910.

Capt. Saunders, New York, and Capt. Parry-Jones, Cleveland, Ohio, arrived in Quebec, Nov. 12, and took charge of the vessel on behalf of Lloyds, and are superintending the salvage operations. Capt. H. St. G. Lindsay, the Dominion Wreck Commissioner, arrived in Quebec, Nov. 16, to conduct an investigation into the circumstances attending the wreck.

THE RELEASE OF THE VESSEL.

After the above had been put in type the vessel was released on Nov. 24 at 4 p.m., when the tide reached 21.2 ft. forward. The Quebec Salvage and Wrecking Co.'s steamship Strathcona pulled the Royal George into deep water, and the latter left for Quebec at 6 p.m. under her own steam, arriving there at 7 p.m., when she entered the Louise basin. An examination showed that she was damaged considerably less than expected, and it was hoped that temporary repairs would be completed so that she might start to recross the Atlantic a few days thereafter.

the command of the Canadian-Australian steamship Marawa. He has been appointed to the Makura, succeeding Capt. Gibbs, who takes command of the company's new steamship Niagara. He is succeeded on the Marawa by Capt. J. T. Rolls.

The Admiralty Court in London, Eng., gave judgment, Oct. 31, in the action arising out of the loss of the s.s. Helvetia, after collision with the s.s. Empress of Britain, on the St. Lawrence in July. The court found that while blame was attachable to both vessels the principal fault lay with the Helvetia, the owners of which must pay seven-twelfths of the damage.

The Plant Steamship Co.'s new steamship Evangeline arrived in Halifax, N.S., from the builders' yard in Scotland, Oct. 30. She left Greenock, Oct. 17, and had rather a rough trip, but proved to be a good seaboat. H. L. Chipman, the company's representative in Halifax, who came over on her, states that a sister ship to the Evangeline is to be built the season of 1914.

E. C. Fry, Lloyd's agent at Quebec, considers that if the British marine underwriters are reluctant to assume risks on the St. Lawrence route after Nov. 25, the Dominion Government should subsidize trans-Atlantic vessels using the route after that date to the amount of the increased cost of insurance. He believes the navigation is quite safe until Dec. 15 at least. In the old days of wooden ships, he said, the date for the expiry of insurance was Oct. 1.

The Shipping Federation of Canada has complained to the St. John, N.B., city council and to the Government about tax of \$7.50 levied on laborers taken into St. John for the winter navigation season. About 200 men are annually taken from Montreal to St. John by the steamship companies in order to provide the necessary skilled labor for loading and unloading trans-Atlantic vessels. The St. John council has informed the Federation that it cannot be expected to supply all the civic benefits gratis to those who are only half yearly residents.

The Head Line steamship Bengore Head, stranded northeast of the Flower Island light in the Straits of Belle Isle early in October, was floated and taken to Quebec, where it was found that she was but slightly damaged. After temporary repairs she sailed for Dublin, Ireland. The investigation by the Wreck Commissioners' Court at Quebec was concluded Oct. 30 and judgment was reserved. A special point for consideration is whether the court has jurisdiction, as the vessel is registered in Ireland and the grounding occurred in Newfoundland waters.

Maritime Provinces and Newfoundland.

The old sealing steamboat Diana, of St. John's, Nfld., is undergoing extensive repairs at Halifax, N.S.

Reports from Indiantown, N.B., state that a company is being formed there to operate a steamboat between St. John and Wickham.

The Halifax, N.S., city council has determined to reconsider its decision of having twin docks built at the Halifax terminal of the Dartmouth ferry.

The Dominion Coal Co.'s tug, Douglas H. Thomas, sank in Halifax harbor Nov. 13, after having been run into by the steamship City of Sidney.

The Dominion Public Works Department has let a contract for the dredging of the harbor at Seaforth, N.S., to the Halifax Dredging Co. at a cost of \$17,300.

The Cape Breton Electric Co. is negotiating for the purchase of the steamboat Henry C. Eaton from the Frontier Navigation Co., Calais, Me., for ferry purposes at Sydney, N.S.

The contract for the building of the marine wharf at Carleton, in the harbor at St. John, N.B., is reported to have been let to F. L. Boone, St. Mary's Ferry, N.B. The estimated cost is \$185,000.

The Dominion Coal Co.'s chartered steamships, running between Sydney, N.S., and Montreal, Que., carry Chinese crews. The navigating and engineering officers are British, but the entire working crews are Chinese.

The steamship Wilhelmina went on the dry dock at St. John's, Nfld., for extensive repairs, Nov. 16. The contract price is said to be \$30,000, and it is biggest piece of work undertaken by the Reid Newfoundland Co. at the docks.

The Dominion Coal Co.'s chartered collier, Glace Bay, arrived at Sydney, N.S., from the builders' yards, Newcastle-on-Tyne, Eng., recently, and was at once put on the trade carrying coal to Montreal. She has a deadweight capacity of 11,000 tons.

The Nova Scotia Construction Co. received Nov. 12 at Halifax from the builder's yard at Liverpool, N.S., a large scow for use on the new harbor works. It is filled with six steam engines for operating the pile driving machines. There are 1,000 concrete piles, of about 16 tons each, to be driven at the new terminal immigration pier under construction.

According to an Ottawa press despatch the Shipping Federation of Canada has protested to the Minister of Marine against the action of Wreck Commissioner Lindsay in investigating the grounding of the s.s. Bengore Head in the Straits of Belle Isle. The accident, it is claimed, took place in Newfoundland waters, and the jurisdiction of the Wreck Commissioner is questioned.

The Crystal Stream Steamship Co. has purchased a new steamboat to be placed on the St. John river between St. John and Fredericton, N.B., next season. The steamboat it now being operated in the vicinity of New York, and is to be delivered during the winter. J. Purvis, representing the company, is reported as stating that the new boat is of modern type steel construction, 160 ft. long, with 5 ft. draught. She is capable of making 18 miles an hour, and has accommodation for 600 passengers.

Province of Quebec Marine.

It is said that the Dominion Government has decided to build a dry dock at Quebec as a public work.

The Quebec Harbor Commissioners extended the time for receiving tenders for the building of a 1,000,000 bush. capacity elevator on the Prince Louise Embankment to Nov. 30.

The Nova Scotia Steel and Coal Co.'s s.s. Gladstone, from Sydney, N.S., to Montreal, with coal, grounded at St. Laurent, Isle of Orleans, Nov. 5, and received considerable damage.

The vessel was released from the rocks and towed into Quebec Nov. 13.

Hon. L. P. Pelletier, Postmaster General, in a speech at Quebec, Nov. 5, stated that it had been finally decided that the location of the dry dock for Quebec will be at Lauzon, near Levis, and that it will be built by the Dominion Government as a national work.

The Aurelie G., the new tug built in

Glasgow, Scotland, for the Sincennes-McNaughton Co., Montreal, had reached a point 700 miles west of the Irish coast, when stress of weather compelled her to return. It has been decided that she will remain in Glasgow for the winter.

The Steamboat Cecilia L sank at Ile Perrot on Lake St. Louis, Montreal, with the loss of 12 lives, Nov. 2. She traded between Valleyfield and Montreal, was built of wood, and had a capacity of 175 tons. She was caught in a gale, and driven on the rocks, and broke up in a few minutes. Of the 17 persons on board, four only were saved.

The statistics of vessels passing through the Lachine canal for October showed that they carried 5,031,600 bush. of wheat; 495,613 bush. of oats; 38,805 barrels of flour; 595 cases of eggs; 36,425 boxes of cheese; 543 pkgs. of butter; 17,192 barrels of apples, and 51,997 tons of coal, while 64,429 tons of coal were landed at various points on the canal banks. From the opening of navigation to Oct. 31 5,399 vessels passed through the canal against 5,080 during the same period in 1911.

The new Quebec harbor commissioners have entered on their duties, but it will take some time before they can familiarize themselves with the works, wants, etc., of the harbor. The season being so advanced they will, for the present, study the position and call in engineers with a view of having plans prepared for the development of the harbor. The commissioners will endeavor to have the plans sufficiently advanced to be able to commence the most necessary works at latest by next spring.

A. R. Decarry, District Engineer Department of Public Works, Quebec, informed the city board of trade, Nov. 12, of the Government plans for the development of the St. Charles river. It is proposed to build four piers extending northeasterly from the north walls of the Louise docks, to run parallel with the present breakwater. These piers will each be 1,000 by 300 ft. A masonry extension of the Louise embankment will be built in the shape of a triangle to a point where it is proposed to build a dam across the river 2,217 ft. long. There will be two locks in the dam, one to be used for vessels seeking an entrance into the upper reaches of the river, and the other as an exit for shipping. A steel bridge will be built to carry steam and electric railway tracks, as well as for general traffic. The river will be dredged from its mouth to near the marine hospital, and a wall will be built along the north wall of the river.

Ontario and the Great Lakes.

During October 6,780,566 bush. of grain passed through the Welland canal, against 4,826,900 in Oct., 1911.

M. Henry, Deputy Superintendent, Welland Canal, Port Dalhousie, Ont., has been notified that his services will be dispensed with Dec. 31.

The dredge Little Lake has been taken to Lake Simcoe to clear out the berths for the new wharf at Orillia, Ont., which will be 200 by 22 ft.

A bylaw for the imposition and collection of tolls, etc., for the harbor at Meaford, Ont., has been approved by the Dominion Government.

The keel of a new steamboat for the Northern Navigation Co. has been laid by the Western Dry Dock and Shipbuilding Co., Port Arthur, Ont.

The new oil burning steamship Calgary, just out from Glasgow, Scotland, ran aground Nov. 3 in entering the harbor at Buffalo, N.Y., on her first trip.

Capt. A. McMaugh, a well known mariner on the Great Lakes, died at St. Catharines, Ont., Oct. 30, aged 74. He was father of Capt. Jas. McMaugh, Toronto.

It is reported that the Richelieu and Ontario Navigation Co. is arranging to establish a fruit market in Toronto, at the waterfront, east of Yonge street.

The Keystone Transportation Co.'s capital has been increased from \$100,000 to \$500,000 by supplemental letters patent under the Dominion Companies' Act.

The Northern Navigation Co. proposes to erect a storehouse and cold storage plant, a laundry, and to double the capacity of its warehouses at Point Edward, Ont.

During October there passed through the St. Lawrence canals vessels carrying 1,765,632 bushels of grain. Vessels carrying 8,228 tons of coal discharged at Kingston, Ont., during the same period.

An appropriation of \$30,000 is reported to have been secured for the construction of a dry dock at Peterboro', Ont., on the Trent river canal. It is said that the dock will be built at once.

The Dominion Government steamboat Dollard was launched at Kingston, Ont., Oct. 24. She is to be used in the light-house and buoy service, and will be fitted with wireless telegraph.

The steamboat Rosedale, owned by the Inland Lines Co., Hamilton, Ont., went aground at Detour light, near Sault Ste. Marie, Ont., Nov. 11, during a gale, but was released with but slight damage.

The Keystone Transportation Co.'s new steamboat Keybell, built at Collingwood, Ont., is completing her first round trip. She is of the regular canal dimensions, with a dead weight capacity of 2,200 tons.

W. F. Herman, G.P.A., Cleveland and Buffalo Transit Co., is reported as stating that the company proposes to inaugurate a passenger service between Cleveland, Ohio, and Port Stanley, Ont., next season.

A contract has been arranged with the Great Lakes Dredging Co. for the operation of its icebreakers at Port Arthur and Fort William, Ont., in order to keep navigation there open as late as possible this season.

Nicholas Huff, Chief Marine Engineer, Detroit, Belle Isle and Windsor Ferry Co., who retired recently after 20 years' service with the company, was given a dinner by the President and presented with a travelling bag.

The Keystone Transportation Co.'s steamship Keystorm ran on the Scotch Island shoal, near Brockville, Ont., Oct. 26, and sank. She was valued at \$125,000. Her cargo consisted of 2,400 tons of coal consigned to Montreal.

The Mayflower, a freight and passenger steamboat trading on the Madawaska river, between Barry's bay and Ottawa, ran on a rock and sank when three miles out from Barry's bay on the night of Nov. 12, with the loss of nine lives.

Representatives of the Toronto Harbor Commissioners laid before the Dominion Government, Nov. 6, plans for the development of the harbor. The details of the plans will be made public after their approval by the city council.

The Dominion Government steamship Estevan has successfully completed her trial trips at Collingwood, Ont., and has started for Victoria, B.C., via the Straits of Magellan. It is expected that she will reach her destination in January.

The International Waterways Commission is being asked by the United States Government for permission to carry out extensive improvements on the Livingstone

channel on the Detroit river. The channel passes through both Canadian and U. S. waters.

The first Welland canal was opened for traffic Nov. 3, 1829. There were between Lake Erie and Lake Ontario 40 wooden locks, each 100 ft. long, 22 ft. wide, and 8 ft. deep. On the proposed new canal, the locks will be 900 ft. long, 32 ft. wide and 30 ft. deep.

The Toronto Ferry Co.'s annual meeting has been postponed for a month owing to the audit being incomplete. The Managing Director, L. Solman, is reported as stating that the earnings for the year will not be as great as last year, owing to the wet season.

The Hamilton Steamboat Co. has surrendered its charter to the Ontario Government, and has been dissolved. Its property was acquired some time ago by the Niagara Navigation Co., and afterwards transferred to the Richelieu and Ontario Navigation Co.

The Richelieu and Ontario Navigation Co. is reported to have acquired an extensive waterfront site at Fort William, Ont.

The Dominion Government has awarded the Windsor Dredging Co. a contract for dredging at Port Stanley, Ont., estimated to cost \$17,000.

G. Charett, Windsor, Ont., had his license as a first class pilot suspended for 30 days from Nov. 5, for violation of certain navigation rules in connection with the collision between the steamboats Pine Lake and Fleetwood on Lake St. Clair, Oct. 21, in which the former was sunk.

The new Livingstone channel, which the U.S. government has completed through the Detroit river at a cost of \$10,000,000, has been opened for traffic.

Beginning Nov. 10 all downbound steamboats started to use the new channel at night as well as by day. The old channel will be used exclusively by upbound vessels.

The Georgian Bay Elevator Co. has been incorporated under the Ontario Companies' Act with a capital of \$100,000 and offices at Meaford, Ont., to build a transshipment elevator there. Following are the provisional directors:—G. W. Mason, F. C. Carter, C. G. French, W. A. McCarthy, W. H. Beatty, Toronto.

The steamboat S. and Y., owned by the Upper Ontario Steamboat Co., went ashore about four miles below Flat rapids on the Montreal river, Ont., Nov. 14, and sank.

The oil driven vessel Calgary left Kingston, Ont., on her first trip to the head of the lakes Nov. 12. She arrived at Kingston from the builder's yards in Great Britain Oct. 28.

The U.S. Lake Survey reports the levels of the great lakes in feet above tidewater for October as follows:—Superior, 602.59; Michigan and Huron, 580.50; Erie, 572.12; Ontario, 246.17. As compared with the average October levels for the past 10 years Superior was 0.19 ft. below; Michigan and Huron, 0.14 ft. below; Erie, 0.05 ft. below, and Ontario, 0.30 ft. above.

It was semi-officially announced at Detroit, Mich., Nov. 11, that the Wabash Rd. had purchased three of the car ferries formerly used by the Michigan Central Rd., between Detroit and Windsor, Ont., viz., the Transfer, Transport and Detroit. The price paid is said to be \$200,000. Up to the present the Wabash trains have been carried across the river on the G.T.R. car ferries.

The Great Lakes Dredging Co. is having built by the Western Dry Dock and Ship Building Co., at Port Arthur, an ice breaking tug, of which the following are particulars:—Length over all, 125 ft.; length between perpendiculars, 114 ft.; beam,

moulded, 28 ft.; depth, moulded, 16 ft.; one Scotch boiler 15 ft. 4½ ins. diameter by 11½ ft. long; triple expansion engine, diameter of cylinders 18, 30, 48 by 38 ins. stroke.

Ottawa reports state that the plans for the new Welland canal are practically completed. It will start from near Thorold, and will extend to Lake Ontario at McCollas cove, three miles from the present outlet at Port Dalhousie, a distance of eight miles. The present canal will be utilized from Port Colborne to Thorold, thus making the whole canal 28 miles long. It is hoped that construction will be started on the new canal in the summer of 1913.

W. N. Warburton, Manager of the London and Lake Erie Transportation, is reported as stating that the new steamboat service to be run in connection with the company's London-Port Stanley electric railway will be from Port Stanley, Ont., to Cleveland, Ohio; that a steamboat of the Cleveland and Buffalo line will make four round trips a week—that the service will be continued annually to Dec. 1, and that traffic arrangements will be made with other lines.

Press reports stated recently that the oil engines on the vessel Toiler, which is managed for a syndicate by James Richardson and Sons, Kingston, Ont., have proved so unsatisfactory that they are to be replaced by steam engines. We are advised that this report is without foundation, and that while the engines have not been operating satisfactorily, it is improbable that some remedy cannot be found for the troubles. The sister oil engined ship, the Calgary, has been most satisfactory in operation.

The steamboat Marshall, owned by the Central Canada Coal Co., Brockville, Ont., ran into the gates at lock 13 on the Welland canal, Nov. 1. Four of the gates were carried away, but the repairs were completed so as to permit traffic being resumed on the following day. The vessel was not damaged.

The steam barge Juneau, with barge in tow, from Point Anne to Toronto, got caught in the gale of Oct. 31. Cutting off the tow the Juneau ran into Cobourg, where she sank. The barge, Lock, got adrift, and springing a leak, sank near the Gull light-house. The crew reached Port Hope Nov. 1, after several hours' rough experience in an open boat.

Manitoba, Saskatchewan and Alberta.

The Dominion Government tug Sir Hector ran on a rock near the mouth of the Little Saskatchewan river, in Lake Winnipeg, Nov. 2, and sank in 18 ft. of water.

W. W. Fryer, who died at Selkirk, Man., Oct. 31, had been engaged many years in navigating Lake Winnipeg. Starting with the Northwest Navigation Co. in 1882, he finally organized the Ewing-Fryer Fish Co.

It is reported from Grand Forks, N.D., that the Red River Transportation Co., which has passed under the control of W. A. Whitney, Superior, Wisc., will likely move its headquarters to Winnipeg, Man., for the opening of the navigation season of 1913.

Navigation is suspended for the season on the Red River and the steamboats of the various companies engaged in the trade have been tied up at their wharves. The managers report that the season has been a good one, despite the weather which affected the passenger traffic, and the accidents.

The St. Andrew's lock on the Red river, near Winnipeg, was closed for the season.

Oct. 25. The lock has been drained, and the Ball Construction Co. has restarted work building cement approaches. The approaches on the east side have been completed, and the foundation work on the west side is well advanced.

An Ottawa press dispatch says the Minister of Railways is planning to push construction in the harbor and on the terminals at Port Nelson, so that when the Hudson Bay Ry. is completed steamships will be able to take cargoes of grain. H. T. Hazen, M. Can. Soc. C.E., has been at Port Nelson all summer making surveys, taking soundings and making a complete investigation as to the feasibility of the port for terminals.

In connection with the press reports referred to in Canadian Railway and Marine World for November as to a projected ship canal from Portage la Prairie, Man., to Lake Winnipeg, it is further reported that a preliminary survey has been made by W. E. Hobbs, of Winnipeg. It is expected to have the surveys completed this year, so that everything will be ready to start construction in the spring. Nothing is said as to who is behind the project.

British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Princess Patricia is undergoing a general overhaul at Victoria.

The last steamboats for the season on the Yukon river left Dawson, Oct. 22.

Capt. C. G. Stormgren, a well known Pacific coast shipmaster, died at Victoria, B.C., Nov. 9.

The C.P.R. steamship Princess Sophia is to have oil burning apparatus installed during the winter.

The Coquitlam Shipbuilding Co., Coquitlam, B.C., has laid the keel of its first vessel, a 175 ft. four masted schooner.

The traffic receipts of the North Vancouver Ferry Co. for October were \$11,692, against \$11,230 in Oct., 1911, and \$6,974 in Oct., 1910.

The Victoria, B.C., tug Bute went ashore off Albert Head, near Victoria, Nov. 2, and sank. She was floated Nov. 5 and towed into port for repairs.

Tenders have been invited for the building on the Pacific coast of two 45 ft. gasoline launches for the Dominion fisheries protection service on the coast.

The steamboat Vidette left Dawson, Yukon, Nov. 3, but was stalled by the ice in the Indian river. The passengers returned to Dawson, 28 miles, by land.

The winter service from Victoria to the Lynn canal, B.C., provided by the C.P.R., started Nov. 2, and is a fortnightly one, the Princess May being on the run.

The beacons and buoys placed by the Dominion Government on Pacific coast waters, which are now painted red, are, it is said, to be painted white in future.

It was announced in Vancouver Nov. 11 that tenders would shortly be asked for the building of a dipper type dredge for use on the Pacific coast, at an estimated cost of \$150,000.

Two additional steam trawlers are on their way from Grimsby, Eng., for the Canadian Fisheries and Cold Storage Co., at Prince Rupert, B.C. Two others have already reached Prince Rupert.

The Dominion Government has advanced Vancouver, B.C., from a port of entry to a first class port. Under the new regulations vessels will be able to secure clearance papers at any hour of the day or night.

The plans for the dock and harbor at Coquitlam, B.C., prepared by A. O. Powell provide for the laying out of district lots

343, 168 and 169 for railway and industrial purposes, with docks, wharves, etc., on the Coquitlam river.

The British Columbia Express Co.'s steamboat B-X ran aground on a bar on the Upper Fraser river between Fort George and Quesnel, B.C., recently. This is the second time she has been damaged on the same bar during this year.

The Vancouver-Tacoma Steamship Co. has been sold to Frank Waterhouse & Co., Seattle, Wash. The company owned one steamboat, the Morning Star, which although having some passenger accommodation, only carries freight.

During the six months ended Sept. 30, the number of vessels arriving at and departing from Victoria, coastwise, was 3,790. During October 316 vessels of 221,094 tons arrived in, and 334 vessels of 190,329 tons departed from the port.

The old paddle steamboat George E. Starr, built in 1879, and operated for years between Olympia, Seattle, Wash., and Victoria, B.C., has been sold to Frank Waterhouse Co., Seattle, Wash. She is to be dismantled and converted into a barge.

The Boscowitz Steamship Co.'s steamboat Vado, ran aground at the entrance of Bayne sound, Oct. 15. She was floated Oct. 26, and beached in Deep bay, where temporary repairs were made, and she was then towed to Vancouver for repairs.

The owners of the Vancouver tug Nouaine are suing the Inland Navigation Co., of Seattle, Wash., to recover \$37,000 damages for the sinking of the tug after a collision with that company's steamboat Iroquois off the Fraser river mouth, Oct. 22, 1911.

It is reported that the owners of Victoria sealing schooners propose to place them under the German flag in consequence of the signing of the convention between Great Britain and the United States prohibiting pelagic sealing in the Pacific ocean for 15 years.

The contract for the building of the breakwater at Ogden point, Victoria, B.C., has been let to the London, Eng., firm headed by Sir John Jackson, at an estimated cost of \$1,800,000. The structure will be 2,500 ft. long, and will extend into a depth of 80 ft.

The Terminal Steamship Co., controlled by Capt. Cotes, has added to its fleet the twin screw oil burner Rowena. This is the old Rowena, remodelled and refitted at a cost of \$35,000. She will be put on the Vancouver-Howe sound run, in place of the present steamboats Bamba and Britannia.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

48. Nov. 9. 281. Nova Scotia, Cape Breton island, Washaback river, buoy established. 282. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, change in characteristic of lights shown from gas buoys on starboard side.

49. Nov. 14. 287. Nova Scotia, south coast, westward of Halibut islands, Salamander rock, buoy established. 288. Prince Edward Island, north coast, North Rustico, change in position of outer range lights. 289. Quebec, River St. Lawrence, port of Quebec, Maheux road, limits of examination anchorage.

92. Oct. 22. 257. Nova Scotia, south coast, off entrance to Lockport harbor, Gull rock, change in characteristic of light. 258. Newfoundland, east coast, St. Johns harbor entrance, existence of a rock; amended position of White rock. 259. Newfoundland, east coast, Bonavista bay, Shoepoint, light-

house established. 260. Newfoundland, east coast, Bonavista bay, Puffin island, change in character of light.

93. Oct. 24. 261. Ontario, Georgian bay, approach to Victoria harbor, Midland point range lights established. 262. Ontario, Lake Superior, Thunder bay, Port Arthur, light on Thunder bay elevator wharf, additional information.

94. Oct. 24. 263. British Columbia, Vancouver island, west coast, shelter sheds established. 264. British Columbia, Burrard inlet, Vancouver harbor, Burnaby shoal, characteristic of fog bell. 265. British Columbia, Chatham sound, Prince Rupert harbor, Charles point, characteristic of fog bell. 266. United States of America, Washington, Juan de Fuca strait, Cape Flattery light station, intended change in fog signal.

95. Oct. 29. 266. Ontario, great lakes and River St. Lawrence, dates to which lights will be kept in operation.

96. Oct. 29. 267. Nova Scotia, south coast, entrance to Halifax harbor, Sambro outer bank, gas and whistling buoy to be replaced during winter by lightship. 268. Nova Scotia, North Atlantic ocean, Sable island, west end, change in character of light.

97. Oct. 31. 269. Ontario, Lake Ontario, Welland canal entrance, Port Dalhousie, operation of fog alarm temporarily discontinued.

98. Oct. 31. 270. Nova Scotia, southwest coast, Clarke harbor, buoy established. 271. Nova Scotia, Cape Breton island, east coast, Eastern harbor, Cheticamp, shoal in entrance, caution. 272. Quebec, River St. Lawrence, Cock point, can buoy replaced by gas buoy. 273. Labrador, uncharted shoal reported in the vicinity of Quaker reef and Tinker island. 274. England, south coast, Plymouth approaches, Draystone, light buoy established.

99. Nov. 5. 275. St. Lawrence river from Quebec to Lake Ontario, first edition of the St. Lawrence Pilot (above Quebec). 276. United States Lake Superior, Superior entry, north pierhead, light established, temporary light discontinued. 277. United States Lake Superior, Superior entry, north breakwater, light established, temporary light discontinued.

100. Nov. 7. British Columbia. 278. Vancouver island, west coast, Clayoquot sound, Templar channel, change in character of buoys. 279. Change in color of lighted beacons. 280. Queen Charlotte islands, Houston Stewart channel, beacon to be moved from Flat rock to Separation point, Tolmie channel.

102. Nov. 13. 283. Quebec, Ottawa river, Rigaud river entrance, range lights now shown from lanterns on poles. 284. Ontario, Ottawa river, Ile Rosalie, lighthouse established. 285. Ontario, Lake Huron, north channel, approach to Blind river, uncharted rock reported. 286. Ontario, Michigan, Detroit river, Livingstone channel, lighted buoy established, buoys provided with lights.

104. Nov. 15. 290. British Columbia, strait of Georgia, sandheads of Fraser river, diaphone fog alarm established on lightship, fog bell discontinued. 291. Alaska, Sumner strait, Vichnefski rock, light established.

105. Nov. 18. 292. New Brunswick, Bay of Fundy, Machias seal island, change in character of light. 293. New Brunswick, south coast, Bay of Fundy, Passamaquoddy bay, Chamcook head, buoy established, Chamcook harbor, buoys established.

106. Nov. 19. 294. Ottawa river, Lake of Two Mountains, St. Placide upper range, new back range lighthouse. 295. Ontario, Georgian bay, Colpoy bay, Wiarton, change

in position of light. 296. Ontario, Georgian bay, east side, southeastward of Roberts island, Honey harbor, beacon erected. 297. Ontario, Georgian bay, east side, approach to Parry Sound, red rock characteristic of fog alarm.

Comprehensive Scheme for Toronto Harbor Improvements.

The Toronto Harbor Commissioners have approved of a comprehensive scheme for the improvement of Toronto harbor, which was prepared by the commissioners' engineer, E. L. Cousins. The plans call for an expenditure of \$19,142,088.91 within the next 10 years, it being apportioned as follows:

Commissioners' work, raised by debentures on property	\$11,215,920.85
City's work (essential only)	 146,500.00
Government work	 6,123,284.66
Total	\$17,485,705.51
Further city payment if council accepts park and boulevard scheme	 1,656,383.40

Grand total\$19,142,088.91

The plans have been submitted to the Dominion government, and it is expected that some provision will be made in the estimates at the current session, so that work may be started next spring.

The commissioners have submitted the following summary of the scheme:

A modern harbor, with a uniform depth of water capable of accommodating any vessel with a draught of 24 ft.

Modern, permanent docks on the central waterfront served by 24 ft. of water, and equipped with the best of freight sheds, warehouses, and appliances.

A dock and industrial district at the foot of Cherry street, equipped with freight sheds, warehouses, and the first of a series of factory buildings to serve the needs of the east end.

A similar area at the foot of Bathurst street, to take care of west end business.

Proper co-ordination of rail and water traffic at all three of the above points, in order to properly develop the port.

An industrial area containing 644 acres of available land in the Ashbridge bay district, which will be known as the Toronto harbor industrial district, capable of accommodating factory buildings with a value of \$30,000,000, and producing a ground rent revenue of \$500,000 a year.

A ship channel, 6,800 ft. long, 400 ft. wide, and 24 ft. deep, with turning basin 1,000 ft. square at its east end, serving the industrial district and the eastern portion of the city generally, and equipped with three miles of dockage.

A dock area on the west face of the industrial district capable of development, so as to provide an additional dock frontage of 2½ miles.

A new lakefront park and waterway, extending from the eastern channel to the foot of Woodbine avenue, and containing 352 acres protected by a breakwater three miles long. Inside the breakwater will be ample accommodation for east end aquatic clubs.

A protected waterway, with an average width of 600 ft., behind a breakwater from Woodbine avenue to the east city limits.

Additional park areas on the Island totaling 352 acres. New park areas in the district from Bathurst street to the Humber river containing 190 acres, and fronting on a protected waterway 500 ft. wide, which is separated from the lake by a breakwater.

A total area of new park lands of 894 acres.

A bathing beach 1 1-3 miles long, from Sunnyside to the Humber. A similar beach ¾ miles long, from the eastern channel to Victoria park.

A lakefront boulevard system of drive-ways, bridle-paths, and walks across the waterfront for 11 miles.

A protected waterway 12 miles long, from east to west along the city front.

A terrace promenade 6,880 ft. long and 55 ft. wide, from Sunnyside to the Humber.

A double-deck combined traffic and recreation pier 300 by 20 ft. in front of the exhibition grounds.

A location for aquatic clubs 1,000 by 300 ft. north of the new western channel, with an anchorage basin of absolutely protected water covering 42 acres. A similar location at the foot of Roncesvalles avenue, 800 by 250 ft., fronting on the protected waterway formed by the western breakwater.

A public playground covering 3½ acres east of the foot of Roncesvalles avenue. A public square 600 by 500 ft. west of Roncesvalles avenue.

A reservation 80 ft. wide, from the Humber river to Sunnyside crossing as a right of way for radial lines.

A new Lake Shore road 66 ft. wide, to the south of the radial railway reservation.

Large Lake Passenger Steamboats.

The Detroit and Cleveland Navigation Co.'s steamboat City of Detroit III., which was put in service between Detroit, Mich., and Buffalo, N.Y., during the past summer, was claimed to be the largest vessel of its type on the great lakes, if not in the world. She is 470 ft. long overall, 455 ft. on the keel, 55 ft. beam of hull and 22 ft. deep. But she will be outclassed by a vessel which is being built for the Cleveland and Buffalo Transit Co. to run between Cleveland, Ohio, and Buffalo, and which will be 500 ft. long overall, 58 ft. beam, 96½ ft. wide over the guards, and have a displacement of 7,000 tons.

The hull of the C. & B. vessel is of steel, divided into 12 compartments by watertight bulkheads, and having a double bottom extending over the entire length. The doors in the bulkheads will be operated by hydraulic power, controlled from the engine room. There will be automatic sprinklers and an automatic fire alarm system, and the kitchen will be in a separate fire-proof compartment. The vessel will have 500 staterooms, accommodating 1,500 passengers, and will have a total capacity for 6,000 passengers and 1,500 tons of freight. All rooms will be equipped with running filtered water, electric light and telephones; ventilation will be provided by fans delivering cooled air. The main saloon will be 400 ft. long, and the dining room will have a series of alcoves with bay windows so as to afford a good view from the tables.

As to the use of side wheels instead of screws for propulsion, the company states that the former system has been adopted as affording maximum comfort to passengers, although it is thought to cost more for construction and operation. The engine is of the three cylinder compound inclined type, having a high pressure cylinder 66 x 108 ins. and two low pressure cylinders 96 x 108 ins. It will drive feathering wheels 30 ft. diameter over the buckets. At 30 r.p.m. the engine will develop about 9,500 h.p. and give a speed of about 22 m.p.h. the boiler equipment will include six single end and three double end marine boilers, each 14 ft. diameter, and these will have 24 furnaces 56 in. diameter. They will be arranged in four batteries, each with its own smokestack, the height from grates to top of stack being about 80 ft. The bunkers will have capacity for 600 tons of coal. There will be three turbo generators, supplying current for fans, motors and over 5,000 lamps.

For convenience and safety in the hand-

ling of so large a vessel in the harbor, she will be provided with double rudders, one at each end.

The Port of New Westminster, B.C.

The following information has been sent by the New Westminster Progressive Association. The city is on the Fraser river, 13 miles from salt water:—

The harbor extends from the head of Douglas island, about 28 miles from Sandheads lightship, down the north arm to salt water, south to the international boundary and up the south arm to Douglas island again. The main deep-water channel, or south arm, is 28 miles long, and the north arm, for log towing and small vessels, 14 miles. There is a depth of 14 ft. at low water and 26 ft. high water at Sandheads. When the Dominion government's work at the Sandheads is finished the depths will be 25 ft. at low water and 37 ft. at high water. There is an average depth of 40 ft. along 1.7 miles of municipal waterfront. The tides are 12 ft. at the Sandheads and 5 ft. at New Westminster. The water is fresh and good for boilers. Marine growth dies and falls off in the river in 10 days or so.

The pilotage is \$1 per foot of vessel's draught and 1c. per registered ton each way. Half charges if no pilot is employed. The harbor dues run from 50c. for vessels of 50 tons and under to \$5 for vessels over 700 tons. There are no dock dues. The wharfage is 5c. a ton. Railways make no charge on freight delivered from or to their own trains. The berthage is \$1 a day, where any charge at all is made. Towage is unnecessary except for sailing vessels, when the charge is a matter of bargain.

The wharves are as follows:—C.P. Railway, 340 ft. long; C.P. Navigation, 700 ft. long; B.C. Transport, 600 ft. long; B.C. Electric Ry., Great Northern Ry., Canadian Northern Ry. at Port Mann, 1,000 ft. long, and many other privately leased wharves.

The C.P.R., the Great Northern Ry., and the B.C. Electric Ry. parallel the waterfront and run right on to the wharves.

A Dominion government dredge is at work at Sandheads, and another on the north arm. The Dominion government contract for the first 6,900 ft. of three mile jetty will be completed by April 1, 1913, and will form part of the LeBaron scheme, which will give 25 ft. at low water from the Pitt river to the Gulf of Georgia. A municipal dredge will soon be at work improving the city water front by filling Front street and carrying the harbor line farther out to an unbroken quay over a mile long.

The Floating Dry Dock for Montreal.—The Duke of Connaught, the dry dock for Montreal, a description of which was given in Canadian Railway and Marine World for October, arrived in Montreal, Nov. 1. The dock was 60 days in making the trip from Barrow-in-Furness, Eng., being towed across the Atlantic by two tugs. The voyage was a very tempestuous one, the dock breaking away from the tugs five times. The average rate of progress during the trip to Sydney, N.S., was four miles an hour. After lying a week at Sydney, stormbound, the towing was resumed. Traffic was suspended in the river at Montreal, Oct. 31, to the afternoon of Nov. 1, in order to give the dock a free passage. The dock was formally opened Nov. 18 by the Duke of Connaught, after whom it was named.

The Richelieu and Ontario Navigation Co. has declared a quarterly dividend of 2%, payable Dec. 2, to shareholders of record of Nov. 30.

The Minister of Marine on the St. Lawrence Insurance Rates.

Following are extracts from a verbatim report of the speech of Hon. J. D. Hazen, Minister of Marine, at the Canadian Manufacturers Association's annual dinner in Ottawa recently:—

I see that you had before you for consideration a subject of very great importance to the people of Canada as a whole, of special importance to the shipping interests and to those bringing from across the seas goods and raw material for the purpose of selling them in Canada or manufacturing them into goods that will be sold in Canada. I notice that a resolution was brought before you and after some amendment was passed with regard to the rates of insurance that are being paid upon the St. Lawrence route. I don't think I am overstating the case when I say it is the conviction of all who have studied trade conditions so far as they relate to the shipping interests of this country, that Canada is discriminated against by the underwriters so far as the rates of marine insurance upon the St. Lawrence, and in fact in the whole of British North America are concerned. Lloyd's insurance rates on single screw vessels plying to United States ports are from 10 to 11 cents on \$100, and for the same type of steamer using the St. Lawrence route it is 15 cents. On double screw steamboats plying to U.S. ports the rate is 15 cents, and for the same type of vessel on the St. Lawrence route 22½ to 25 cents. It will be admitted, I think, on all sides that that is a very serious handicap to Canadian shipping and to the importers of goods from the British Isles; but there is worse than that, for commencing on Sept. 1 Lloyd's raised the rate on tramp steamers using the St. Lawrence 1% on the cost of the vessel, and for the month of October 2% on the cost of the vessel, the result is a rate is imposed upon tramp steamers coming to the St. Lawrence that is practically prohibitive, and that vessels of that class are kept away from the St. Lawrence, and in the fall an impossible state of affairs occurs, and it is impossible to move from the St. Lawrence the amount of grain that is coming there for shipment or that would come there for shipment if steamers of the tramp class could be got to come to Montreal for the purpose of carrying that grain away. That constitutes a tremendous handicap upon the Canadian trade, it gives that enormous advantage to U.S. ports, and the result of that is that thousands upon thousands of tons of grain that in the natural course of events ought to be shipped out of the St. Lawrence in ships sailing to Montreal or Quebec, are carried down to U.S. ports and shipped on vessels sailing to U.S. ports and the business given to those U.S. ports, and the advantage of that trade is lost to the Dominion. That is a state of affairs that cannot be regarded complaisantly by people endeavoring to build up on this northern part of the continent a great commercial country, that ought to be able to handle through its own ports the products of its own fields and prairies.

The resolution finally adopted at the meeting of the Manufacturers' Association to-day asks the government to cause representations to be made to those who are engaged in underwriting risks upon vessels sailing between Great Britain and Canada, and if those representations are not availing, then asking the government to assist in the carrying out of some plan of insurance that will enable vessels engaged in the Canadian trade to get insurance rates on terms that were more equitable and fair, and that were more in proportion to the rates imposed upon vessels sailing to U.S. ports. Representation of the

character asked have already been made to the underwriters and to Lloyd's in Great Britain. Representations have been made in the past, representations were made during the past summer when a number of the Canadian ministers were in London. Facts and figures have been laid before the underwriters; it has been pointed out that during late years great improvements have been made in the St. Lawrence route; that not many years ago the depth of water in the channel from Montreal down in places did not exceed 10 ft.; to-day from Montreal to the sea we have a channel 30 ft. deep, a channel that is being widened, straightened out and improved every year, and which is now being deepened to 35 ft.; it was pointed out that of late years aids to navigation of the most modern character it is possible to obtain, have been placed along the St. Lawrence; that there is a lighthouse practically on every headland, that on every promontory and point there is something to guide the mariner, and that the channel is well buoyed, and in addition to that submarine bells have been established, and that the most modern and up to date aids to navigation have been established along the St. Lawrence route, and that the government is willing to go on spending money, putting better aids on as the inventive genius of man produces aids that are better than those we have to-day; and there has been an improvement of a very great character indeed in the aids to navigation upon the St. Lawrence, and to-day there is no waterway in the world that is better guarded, better protected, better buoyed or lighted than is the St. Lawrence from Montreal to the sea. It has been pointed out to the underwriters that the reductions in insurance rates have not been at all commensurate with the improved conditions that have been brought to pass on the St. Lawrence river, and that today the rates being charged to Canadian ports are out of all reason and all proportion to the rates that are being charged to the U.S. Although all these facts have been laid before the underwriters I regret very much to have to say that I cannot give any reason to hope that the underwriters are prepared to make any reduction in the rates at present time so far as the St. Lawrence route or the ports of Halifax and St. John are concerned. Therefore, I think there is little to be gained or to be hoped for from any further representations that will be made to the underwriters.

The second part of the resolution asks the government to assist in a scheme that may be evolved for the purpose of causing a reduction of those rates, or, as I understand it, of having some scheme of insurance evolved under which owners of vessels coming to Montreal and the St. Lawrence and St. John and Halifax may get their ships insured at a rate that is fairly in reason compared with the rates to vessels going to the U.S. Up to the present no proposition of a feasible character seems to have been made to any government in Canada with regard to the establishment of a Canadian Lloyd's or a marine insurance to be assisted by the government. I read the resolution passed this forenoon not to mean that they expect the government of Canada to undertake the work of insuring ships coming to the St. Lawrence, but as a request on their part that they would be willing to co-operate with vessel owners and others interested in this trade for the purpose of bringing to pass a better condition of affairs than exists today. I have no right to state, without consulting with my colleagues, what the policy of the government may be in that

respect, but I think the practical course to take would be for the shipping interests on the St. Lawrence and for those who are interested in the importation of goods, to formulate some scheme of bringing about a better condition as regards insurance rates, with government aid, and to submit that proposition for the consideration of the government of Canada, and I don't think that the Premier would haul me over the coals at all for making the statement that I believe if they do so their appeal will not fall on unsympathetic ears, and that the government, having regard to the great industrial and commercial interests of this country, will be prepared to assist in a generous manner anything that may be suggested that will bring about what is so much desired by the shipping interests, and which will do so much to build up trade in Montreal and in the ports of the lower provinces as well.—Industrial Canada.

Port Colborne-Dundurn Collision.

The investigation into the collision between the s.s. Port Colborne and the s.s. Dundurn, while going through the draw of St. Dominique bridge in the Soulages canal, on Sep. 9, whereby damage was done to a bridge and to the Dundurn, was held by Commander H. St. G. Lindsay, Dominion Wreck Commissioner, assisted by Captains F. Nash and J. McGrath, as assessors. Following is the decision:—

The Port Colborne is a vessel whose size is almost the limit which can navigate the canal. She therefore requires the deepest water, viz., the centre of the canal to navigate in. She was proceeding up the canal and, when within a short distance of the bridge, sighted the Dundurn, which was coming down, and almost at the same time answered the signal made by the Dundurn, of one blast on the whistle, meaning that he was going to pass to port in the usual manner. The Port Colborne was proceeding at about three knots when this signal was made, and expected to pass the draw of the bridge before the other vessel (the Port Colborne having the right of way). As the Port Colborne entered the draw of the bridge her master noticed that the Dundurn was steering in an erratic manner, and coming with considerable speed she struck the Port Colborne with her bow, and the impact of this threw the Dundurn's head towards the bridge, which was open and lying parallel with the south side of the canal, causing her to run into the bridge, damaging both the bridge and herself. The evidence of the Dundurn's master and crew showed that when the Port Colborne's lights were sighted, and the one blast signal was given, the master was unaware of the close proximity of the bridge, owing to the regular bridge lights not being exhibited, and he having allowed his vessel to get too close to the bank increased her speed so as to enable her to answer her helm quickly, and after getting his vessel straightened up and headed for the Port Colborne he noticed that that vessel was sheering slightly towards the south bank, thereby giving him a very small space to pass, and with the idea of avoiding a collision he gave the order for full speed ahead, hoping that he would be able to clear the Port Colborne and avoid running into the bank. At this time he first noticed the bridge, but the speed of his vessel was such that he could not then with safety have reversed his engines and stopped his ship, and the two vessels came together. Just before the impact the captain of the Dundurn reversed his engines and put his helm hard aport, the fact of the engines going astern and the helm hard aport increased

the swing to such an extent that his vessel struck the swing span of the bridge, knocking it off its pivot.

Had the Port Colborne, on sighting the Dundurn and answering her one blast signal, made the signal of three blasts which the court is informed is customary in such cases in the canal, and to be a request to the other vessel to check her speed, the accident might possibly have been prevented. The court is also of opinion that if the regular bridge signal lights had been exhibited, the Dundurn would never have attempted to pass the other ship in the draw. The captain of the Dundurn committed an error of judgment in still reversing his engines after the collision with the Port Colborne, as that order when carried out tending to increase the swing of the ship's head towards the bridge. The ordinary lights at St. Dominique bridge are a red and green light on the bridge itself and a white arc light on a pole at the south approach. On the night in question these lights were out of repair and in place of them the bridge tender had placed one ordinary oil lantern, showing a white light on the east side of the bridge and another similar lantern on the bank at the south approach to the bridge. The court therefore finds that the Dundurn was to blame for the accident and censures her master, and is of opinion that the lights used on the bridge to replace the regular lights which were out of order also contributed to the accident, and suggests that this matter be drawn to the attention of the Department of Railways and Canals.

C.P.R. Transfer Barge for Pacific Coast Service.

The C.P.R. has let a contract for building a car ferry barge, to be known as Transfer Barge no. 4, to handle traffic between Vancouver and Ladysmith, the company's point of connection with the Esquimalt and Nanaimo Ry., on Vancouver Island. She has been designed to carry 15 loaded 40 ft. freight cars.

The length overall will be 260 ft.; beam, 42 ft.; depth, 12 ft. She will be built similar in design to other barges already in the Pacific coast service, that is to say, she will have a moulded shipshape bow with a scow stern. The cars will be loaded and unloaded over the stern. The forward end will be divided off for the accommodation of the crew. She will be fitted with a steam boiler and windlass for the handling of anchors and the necessary pumps, etc. She is to be built by the British Columbia Marine Ry. Co., at Esquimalt, B.C., will be of steel throughout, and will be delivered in about eight months.

A transverse web frame will be placed in the way of longitudinal floors. There will be transverse watertight bulkheads, dividing the hull into six compartments. There will be two watertight bulkheads, to form fresh water tanks. The forepeak and two wing spaces in the after compartments will be fitted for water ballast. Instead of the usual bulwarks there will be trusses extending from aft to break of house. There will be three railway tracks. There will be heavy bumpers placed aft of break of house. There will be all deck fittings for securing apron, cars and barge, and all the necessary machinery for handling—such as boiler, windlass, capstan and pumps. There will be a short forecastle deck, arranged for housing machinery, coal bunkers, galley and crew's quarters, etc. The housework and pilot house will be constructed on the forecastle deck.

Investigation Into the Loss of the s.s. Keystorm.

Following is the finding of Commander H. St. G. Lindsay, Dominion Wreck Commissioner, who was assisted by Captains F. Nash, F. J. Thomson and J. McGrath, acting as assessors:—

The Keystorm, a vessel of 1,037 tons register, belonging to the Keystorm Transportation Co., of Montreal, engaged regularly in the coal trade between various coal ports in the United States and Montreal, left Charlotte, N.Y., on Oct. 25, about 3 p.m., for Montreal with a cargo of 2,273 tons of coal, and arrived off Tiobett point in the St. Lawrence about midnight. At 12.15 a.m., on Oct. 26, the master gave over the charge of the navigation to his first mate, with orders of a very indefinite nature as to what he should do, but, for some reason or other did not go below to his quarters, but remained on the forward deck, evidently not being quite satisfied of the first mate's ability to run the vessel in the intricate channel in that locality, and also being doubtful as to the state of the weather, which was at that time unsettled. At 3 a.m., the ship being off Alexandria bay, the master retired to his bed, the weather conditions, according to his evidence, being the same, but he did not take off his clothes, evidently expecting a call. From that point the vessel proceeded safely up to Sister's island light, which was a perfectly straight course from Sunken Rock light. When passing the Sister's she ran into a bank of fog, which obscured all lights and land marks. The first mate then showed a total disregard of prudence, or common sense, and not knowing what course the vessel should steer by compass, never having, as he said, paid any attention to such a method of navigation, he tried to take the customary course by using what he supposed was the glimmer of the light on Sister's island over the stern, but without being able to see the gas buoy on Chippewa point shoal, which under ordinary circumstances would have shown on the starboard bow, and then being doubtful of the ship's position, and without any reduction of speed, sent down to call the master, but before this could be done the ship struck on the Outer Scow shoal and became a total loss.

The court finds that the master, Louis Daigneault, showed a lack of judgment in allowing the mate to take charge of the navigation of this valuable vessel in this particular locality, where the greatest amount of care is necessary for navigation even during the day time, knowing as he did the limited experience the mate had in this work, and his going below at 3 a.m. was an act of culpable negligence, as there were still dangers to avoid, and in less than two hours' time it would have been daylight. The court therefore suspends his certificate from Nov. 1, 1912, to Nov. 1, 1913. With respect to the conduct of John Leboeuf, the mate, the court is of opinion that his neglect to call the master when the weather became thick, his lack of initiative in not stopping the engines when he lost his bearings, and his utter disregard of the compass course to be steered was gross and culpable negligence, and suspends his certificate from Nov. 1, 1912, to Nov. 1, 1914.

The court severely reprobates the very loose method of navigation which seems to be customary on vessels of this class, and particularly the want of compass courses, and suggests a printed card of all courses and distances on the various runs, the card to be hung up in the pilot house, ready for instant reference in case the leading

lights or marks become obscured, as happened in this case.

The court is of opinion that everything was done in the engine room with regard to the pumping arrangements, but in spite of this the water gradually gained and ultimately caused the vessel to slip off the shoal into deep water and founder about five hours after stranding. No attempt seems to have been made to try and get the vessel off the shoal, and it is the court's opinion that under the circumstances it was just as well that such was the case.

Running Down of Fishing Boat by s.s. Canada.

Commander H. St. G. Lindsay, Dominion Wreck Commissioner, assisted by Capt. F. Nash, of Montreal, and Capt. C. Powell, of Campbellton, N.B., held an investigation at Campbellton recently into the collision between the s.s. Canada, belonging to the Campbellton and Gaspe Steamship Co., and a fishing boat of Grand River, Que., on Aug. 9, whereby the fishing boat sank and one man was drowned.

The court on considering the evidence of the master and crew of the Canada (that of F. Thibaudeau, the other member of the crew of the fishing boat who was saved not being obtained owing to his refusal to attend the court at Campbellton) finds that the Canada was navigated with proper and seamanlike care after leaving Grand River, and that the cause of the accident was due to the fact that no lights, fog signal or lookout were in evidence on the fishing boat at the time, although the weather was dark and hazy; therefore, the court does not consider that any blame for the accident should be attributed to A. Belanger, master of the Canada. The court is of opinion that for the greater safety of both coasting steamboats and fishing boats on the coast, that more attention should be given by fishermen to article 9 of the International Rules of the Road regarding lights and fog horn signals for fishing boats, and that a proper lookout should be kept while lying at anchor, or at their nets, for had such been the case on the morning of Aug. 9 this un-

Dominion Expenditures on Canals, Harbors Etc.

The public accounts for the year ended Mar. 31 show that in addition to the consolidated fund expenditures there was expended on Canadian canal systems on capital account \$2,560,938.11, of which \$1,746,095.48 was on account of the Trent valley canal. There was also expended on capital account the following sums on harbor and river works:—

Port Arthur and Fort William harbors	\$996,120.02
Quebec harbor	510,818.45
River St. Lawrence ship channel ..	1,167,462.56
Red river improvements, Man.	50,939.49
St. John, N.B., harbor improvements	579,059.21
Tiffin, Ont., harbor	105,525.65
Victoria, Ont., harbor	149,983.76
Bare Point breakwater	19,335.70

Total

Advances of \$3,050,000 have been made to the Montreal Harbor Commissioners under statutory powers.

The total revenues from the canal systems were \$263,716.75 against \$221,138.49 in 1910-11.

W. P. ANDERSON, Chief Engineer of the Marine Department, Ottawa, has been appointed to represent Canada at the River and Harbor Congress to be held in Washington, D.C., in December.

Telegraph, Telephone and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Conquest and McGee, Sask.

The Canadian Northern Telegraph Co. has opened offices at Norquay, Steven, Delmas and Harwell, Sask., and Drumeller, Alta.

In the general balance sheet of the Dominion for the year ended Mar. 31, the government land and cable telegraph lines are valued at \$348,320.77.

The G.N.W. Telegraph Co. has reopened its office at Richmond, Que., and has closed its offices at Anson and Beamsville, Ont., and Abenakis Springs hotel, Que.

J. B. Rogers, for many years wire chief in the Great Northwestern Telegraph Co.'s Toronto office, has been appointed chief operator, vice C. E. McManus, resigned on account of ill-health.

The new wireless telegraph station at Alert Bay, B.C., the tenth of the stations being erected on the British Columbia coast, is expected to be ready for operation early in December.

The Western Union Telegraph Co. commenced on Nov. 1 to operate all former Great Northwestern offices in New York state except Bombay and Fort Covington, which will still stand as G.N.W. offices.

B. Oldham, wireless operator on the Northern Navigation Co.'s steamboat Huronic, was recently ordered to pay the costs in a case in which he was charged with deserting his ship at Sarnia, Ont., Oct. 21.

The Western Union Telegraph Co. has removed its office in Victoria, B.C., from the corner of Government and Bastion streets to 614 View street, where every provision has been made for its increasing business.

The cable ships Mackay-Bennett and Colonia are at their wharves in Halifax, N.S., transferring cable preparatory to starting out on further repair work. The Commercial Cable Co. has completed the erection of a new wharf for the use of these repair steamers.

The Canadian Northern Steamship Co.'s s.s. Royal Edward, on a recent inward trip signalled her position to the wireless station at Cape Race, Nfld., when 430 miles eastward of that place, which is said to be the longest distance over which communication has been established without a relay in the records of the Canadian signal service.

What is said to be the largest wireless station in the world is being completed and tested out at Arlington, Va. It is one of proposed system of government stations connecting all the strategic naval and military centres of the country. The Arlington plant, including towers, equipment and power station is estimated to have cost about \$1,000,000.

The G.T.R. is gradually extending the telephone system of train despatching. As soon as the line can be completed it will be put in force from Montreal to Chicago on the main line. It is said that this system will be in use on the 15th district between Toronto and Sarnia tunnel about Jan. 1. During the course of the next few months the various despatchers will visit Allandale, Ont., and familiarize themselves with its operation.

Two new wireless telegraph stations have been completed on the upper lakes, viz.:—Midland and Tobermory, Ont., and a third is being completed at Sault Ste Marie, Ont. It is proposed to remodel the station at Port Arthur, Ont. These stations have a range of 300 miles each. Work has been started on a station at Point Edward, near Sarnia, Ont., and it is proposed to erect a

series of stations through to Montreal. When the stations are fully equipped regulations will probably be put in force to compel all vessels to have wireless equipment.

The Dominion Government telegraph line from Ashcroft, B.C., to the Yukon territory is over 2,500 miles long. During the last operating year about 100,000 messages were despatched in each direction, the financial report showing a loss of \$80,000. This is due to the excessive cost of maintenance owing to the severe weather, and the fact that repairs are constantly patrolling the line. During the last operating year a branch line was built to Port Stewart, 175 miles, and a branch is being built from 150 Mile House on the Cariboo road to Bella Coola.

The Intercolonial Ry.'s Ocean Limited trains will be left on the route between Halifax and Montreal and Montreal and Halifax as daily trains, instead of being discontinued for the winter as heretofore, this being rendered necessary by increased traffic. The Maritime Express trains will also be continued, giving two through trains per day each way.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Conquest and McGee, Sask.

The Canadian Northern Ex. Co. has opened offices at Norquay, Steven, Delmas and Harwell, Sask., and Drumeller, Alta.

The Canadian Northern Ex. Co.'s agency at Antar, Sask., has been transferred to South Moose Jaw, at end of steel on Moose Jaw subdivision. As there is at present no direct means of connection between that point and the city of Moose Jaw, all traffic for the latter point will, until further notice, continue to be routed via Regina for transfer to Dominion Ex. Co.

The Board of Railway Commissioners has defined the express delivery limits for Halifax, N.S., as follows:—the water front at northwesterly boundary from east end of Miller street, from south end of L.R.C. fence in Campbell road, to Duffus street, Longard road, Livingston street, Intercolonial cotton factory, Young, Oxford and North streets, Chicago road (to Swain street), Beech street, Quinpool road, Oxford street, Co

Canadian Express Company, Electric Truck.

(For description see Canadian Railway and Marine World, November, pg. 568.)

Internal Combustion Locomotives are, it is said, to be used on the construction of the Australian Transcontinental Ry. on account of the waterless desert country traversed by this new line to the west coast. These will be mainly small contractors' engines, such as have been used elsewhere, but it is suggested that the experience with them may assist in the development of larger ones of the same type to handle the traffic when the railway is in operation.

Railway Trespassers are responsible for a number of accidents and are a source of much trouble and expense to the companies, according to a survey of this matter just made by the Pennsylvania Rd. Last year 527 trespassers lost their lives on the Pennsylvania lines, where they were present in violation of the law. Their acts endangering the lives of the public and employes and giving difficulty to the railway were of such nature as breaking signal and switch lamps and placing obstructions on the tracks. Over \$100,000 was spent by the company's police department during the year in efforts to overcome these troubles.

bourg road to northwest arm, including Oakland road, Wellington and Inglis streets, Tower and Bowery roads and Franklyn and Miller streets, to the harbor.

The United States Ex. Co. has issued the following statement:—"The directors have decided not to declare the semi-annual dividend usually paid in November. For the year ended June 30, gross revenue from operation increased \$709,181. The increase of expense was \$1,149,484, and net earnings for the year from all sources applicable to dividends was \$233,228. In view of these results and the establishment of the parcels post and other problems now confronting the company and the uncertainty arising therefrom as to future earnings, the directors do not feel justified in declaring the dividend at this time." The company has paid dividends continuously since 1896. The annual rate of 6% was established in 1910.

The Wabash Rd. is said to have decided to proceed at an early date with the construction of new locomotive repair shops at Decatur, Ill.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

W. B. SNOW, publicity engineer, Boston, Mass., has increased his staff by the addition of F. R. Lufkin, formerly of the instructing staff in electrical engineering of the Massachusetts Institute of Technology, and late Assistant Superintendent of Lighting and Wires of Brookline, Mass.

THE TITANIUM ALLOY MANUFACTURING Co., owing to the rapidly increasing demand for its product, and the necessity for greater efficiency in consequence, has removed its general sales department to the works at Niagara Falls, N.Y., and has created a district office at Pittsburgh, Pa., where the usual effective work with the iron and steel trade will be continued. C. V. Slocum is General Sales Agent.

THE PRATT AND LETCHWORTH CO., Ltd., manufacturers of malleable iron castings, Brantford, Ont., has sold its plant, etc., to the Canadian Car and Foundry Co., Ltd., Montreal. The Brantford business, which has heretofore been owned by the Pratt and Letchworth Co., of Buffalo, N.Y., will, it is said, be carried on under its present local management and without change of name. The plant is to be enlarged.

THE COMMERCIAL ACETYLENE Railway Light and Signal Co., 80 Broadway, New York city, has been licensed by the Commercial Acetylene Co. under the letters patent covering dissolved acetylene, and has secured other important inventions in connection with railway and signal lighting. It has also purchased from the Commercial Acetylene Co. all the latter's charging and manufacturing plants.

M. BEATTY AND SONS, LTD., Welland, Ont., has issued a booklet, "Beatty Hoists," which contains full particulars of their steam and electric hoists, dredges, steel scows, drill boats, centrifugal pumps, clam shell buckets, derricks, derrick fittings, etc. Among the illustrations are views showing Beatty hoists in use at the erection of the C.P.R. Skugog river bridge, the C.P.R. Lethbridge viaduct, and the Algoma Central & Hudson Bay Ry. Montreal river bridge. A copy will be sent to anyone interested on application.

Transportation Conventions in 1912-1913

Dec. 11.—Association of Passenger Steamboat Lines, Washington, D.C.

Dec. 12-13.—Association of Transportation and Car Accounting Officers, Louisville, Ky.

Jan., 1913.—American Wood Preservers' Association, Chicago, Ill.

Mar. 18-20.—American Railway Engineering Association, Chicago, Ill.

May 6-9.—Air Brake Association, St. Louis, Mo.

May 20.—Association of Railway Telegraph Superintendents' Association, St. Louis, Mo.

May 26-29.—Master Boiler Makers' Association, Chicago, Ill.

The Michigan Central Rd. is building a 40 stall engine house at Bay City, Mich., and the new machine shops will be largely increased.

Railway and Allied Associations, Clubs, Etc.

The names of persons given below are those of the secretaries.

Canadian Car Service Bureau, J. E. Duval, 401 St. Nicholas Building, Montreal.

Canadian Freight Association (Eastern Lines), G. C. Ransom, Canadian Express Bldg., Montreal.

Canadian Freight Association (Western Lines), W. E. Campbell, 502 Canada Building, Winnipeg.

Canadian Railway Club, J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday each month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers, C. H. McLeod, 413 Dorchester St. West, Montreal.

Canadian Street Railway Association, Acton Burrows, 70 Bond Street, Toronto.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada, C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto 3rd Tuesday each month, except June, July and August.

Eastern Canadian Passenger Association, G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal, R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto, R. B. Wolsey, 94 King St. West, Toronto.

Nova Scotia Society of Engineers, A. R. McCleave, Halifax, N.S.

Quebec Transportation Club, J. S. Blanchet, Quebec.

Western Canada Railway Club, W. H. Rosevear, 25½ Princess St., Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

The French state railway authorities have been conducting electrification experiments on a stretch of the Western Ry., and it is stated that results have been so satisfactory that it has been decided to go into the matter on a larger scale. Contracts for 100 electric locomotives have been placed with French and Belgian builders.

The Master Car and Locomotive Painters' Association of the United States and Canada held its annual convention at Denver, Col., recently. Reports on the maintenance of steel cars, vestibule end finish, car interior renovators, treatment and finish of passenger car concrete floors, care of steel passenger car roofs, etc., were discussed at length. T. J. Hutchinson, of the G.T.R., London, Ont., was elected Second Vice President for the current year. The place for the next convention, which has not yet been settled, will be either Ottawa, Detroit or Chattanooga.

WANTED

Car Estimator, familiar with both freight and passenger work of steel and wood construction. Apply, stating experience, age, and salary expected, to box 4484, Canadian Railway and Marine World.

WANTED

Bill of Material man, familiar with both freight and passenger work of steel and wood construction. Apply, stating experience, age, and salary expected, to box 4484, Canadian Railway and Marine World.

Briquetted Coal on Intercolonial Ry.—A press report from Amherst, N.S., stated recently that a new patent coal fuel had been put on the market and that a test had been made on the I.R.C. We are officially advised that some briquetted coal, made up egg shaped, about 4 ins. long, was used on the I.R.C. recently on a few trips. There is nothing new in this description of fuel, except its manufacture in Canada. It generally gives satisfactory results.

CANADIAN PACIFIC RAILWAY COMPANY

Issue of New Ordinary Capital Stock

Notice is hereby given that pursuant to Resolution passed at the Special General Meeting of Shareholders on 2nd October, 1912, an issue of \$60,000,000, additional Ordinary Capital Stock of the Company, or 600,000 shares of \$100 each, has been ordered by the Board of Directors.

The said Stock will be offered to the Ordinary Shareholders of record at 3 p.m. on Thursday, the 2nd day of January, 1913, at the price of one hundred and seventy-five dollars per share, being at a premium of seventy-five per cent. over and above the par value thereof, on the basis of thirty per cent. or three shares in ten of their respective holdings.

The right to subscribe will expire at 3 p.m. on Thursday, 13th February, 1913.

Payments will be received at the Bank of Montreal, London, New York or Montreal, as follows:—

20% or \$35 per share on subscription on or before 13th February, 1913.

20% or \$35 per share on 14th April, 1913.

20% or \$35 per share on 16th June, 1913.

20% or \$35 per share on 18th August, 1913.

20% or \$35 per share on 20th October, 1913.

Interest at the rate of 7% per annum will be paid in October, 1913, from the due date of each instalment to September 30th, 1913, on instalments up to and including that of the 18th August, 1913, which have been paid on or before due dates.

All shares of the issue on which instalments have been paid in full on the due dates will rank with the existing stock for the full dividend accruing for the quarter ending 31st December, 1913.

A circular containing the terms of subscription and payment and enclosing warrants of subscription will be mailed to the Shareholders on or about the 15th day of January, 1913.

By order of the Board.

W. R. BAKER,
Secretary.

Dated at Montreal, 18th November, 1912.

WANTED

1,000,000 RAILWAY TIES

The Central Railway Company of Canada invites tenders for supplying railway ties in lots of five to one hundred thousand, for delivery at Ste. Agathe, La Chute, Montreal and Greville, in the Province of Quebec, and Hawkesbury, McAlpine, Ottawa, South Indian, Carleton Place, Bannockburn, Fenelon Falls, Orillia and Midland, in the Province of Ontario.

Tenders will be received until noon on Dec. 20, 1912.

For specifications and other particulars apply to

F. STUART WILLIAMSON,
Chief Engineer,
44 Beaver Hall Hill,
Montreal.

Canadian Northern Ontario Railway Company.

NOTICE is hereby given that the Canadian Northern Ontario Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct:

(a) The lines of railway authorized by the Statutes of Canada for 1911, chapter 57, section 2, paragraph (a), items (i) to (iv), (vi), (ix) and (x), shortly described as follows:—

- (i) Washago to Kincardine.
- (ii) Arnprior to Gananoque.
- (iii) Pembroke to Cobourg or Port Hope.
- (iv) Frenchman's Bay, northwesterly to Owen Sound.
- (vi) Niagara River to Goderich.
- (ix) Hawkesbury to a point in the County of Leeds or Lanark.

(x) Parry Sound to North Bay.
(b) Also the line specified in paragraph (c) of the same section and chapter, namely:—

Berlin, through Guelph, Acton and Brampton to Toronto.

(c) Also the line of railway authorized by the Statutes of Canada for 1908, chapter 93, section 2, shortly described as follows:—

From between Udney and Rathburn to the Georgian Bay.

(d) Also to authorize the construction of the following lines of railway:—

(I) An extension of the line mentioned in paragraph (b) of this notice, southwesterly to Stratford and St. Mary's with a branch to Woodstock.

(II) Sarnia to Chatham.

(III) Orillia to Goderich via Owen Sound or with a branch to Owen Sound.

GERARD RUEL,
Chief Solicitor.

Toronto, 30th October, 1912.

Canadian Northern Railway Company.

NOTICE is hereby given that the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the Company may construct the lines of railway authorized by the Statutes of Canada for 1908, chapter 92, section 2, paragraphs (a), (b), (c) and (h), shortly described as follows:—

- (a) Humboldt to Calgary.
- (b) Maryfield to Lethbridge.
- (c) North Battleford to Athabasca Landing, with a branch to Green Lake.
- (h) Neepawa, northwesterly to the South Saskatchewan River.

Also the line of railway which the Saskatchewan Midland Railway Company (amalgamated with the Company) was authorized to build by chapter 41 of the Statutes of Saskatchewan for the year 1909, section 7, paragraph (v), namely:—

Humboldt to Melfort.

Also to authorize the construction of the following line of railway:—

From a point at or near Swift Current, westerly to a point at or near the junction of the Company's authorized lines to MacLeod and Lethbridge.

Also to confirm and ratify an agreement between the Company and the Canadian Pacific Railway Company respecting the terminals at Regina.

Also to increase the bonding powers of the Company.

GERARD RUEL,
Chief Solicitor.

Toronto, 30th October, 1912.

Niagara, St. Catharines and Toronto Railway Company.

NOTICE is hereby given that the Niagara, St. Catharines and Toronto Railway Company will apply to the Parliament of Canada at its next session for an Act extending the time wherein the Company may construct the lines of railway authorized by the Statutes of Canada for 1906, chapter 132, section 1, paragraphs (b), (c) and (d), shortly described as follows:—

(b) Port Colborne to Fort Erie, and Fort Erie to the City of Niagara Falls.

(c) From the City of Niagara Falls to the Town of Niagara, and from the Town of Niagara to the City of St. Catharines.

(d) From the Town of Welland to the City of Brantford.

Also the line of railway authorized by the Statutes of Canada for 1899, chapter 77, section 8, shortly described as follows:—

An extension of the line of the St. Catharines and Niagara Central Railway Company to a point on the Niagara River at or near Fort Erie, and an extension to the City of Toronto by way of the City of Hamilton or thereabouts.

GERARD RUEL,
Chief Solicitor.

Toronto, 30th October, 1912.

Canadian Northern Quebec Railway Company.

NOTICE is hereby given that the Canadian Northern Quebec Railway Company will apply to the Parliament of Canada at its next session for an Act:—

(a) Extending the time wherein the Company may construct the lines of railway authorized by the Statutes of Canada for 1911, chapter 58, section 2, namely:—

(a) Rawdon northerly to the National Transcontinental Railway, with a branch to Joliette.

(b) St. Jerome to St. Eustache.

(b) Also authorizing the construction of the following lines of railway:—

(i) From a point in the City of Montreal, crossing the St. Lawrence River opposite the City, and from thence to Levis.

(ii) From a point on the last mentioned line east of the St. Lawrence River to a point at or near St. Rosalie Junction, thence to a point at or near Sherbrooke or Lennoxville.

(c) Also defining and increasing the bonding powers of the Company.

GERARD RUEL,
Chief Solicitor.

Toronto, 30th October, 1912.

THE CANADIAN PACIFIC RAILWAY COMPANY.

DIVIDEND NOTICE

At a meeting of the Board of Directors held to-day, a dividend of two and one-half per cent. on the Common Stock for the quarter ended 30th September last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from interest on the proceeds of land sales and from other extraneous assets, was declared payable on 2nd January next to Shareholders of record at 3.00 p.m. on 2nd December next.

By order of the Board,
W. R. BAKER,
Secretary.
Montreal, November 11th, 1912.

Kootenay and Arrowhead Railway.

NOTICE—The Kootenay and Arrowhead Railway Company will apply to the Parliament of Canada at its next session for an Act extending the time within which it may construct the railway from Gerrard to Arrowhead, and authorizing an increase of its bonding powers, and for other purposes.

Dated at Montreal, this 23rd October, 1912.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Collingwood Southern Railway Company.

NOTICE—The Collingwood Southern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the line of railway which it has been authorized to construct by section 8 of chapter 77 of the Statutes of Canada, 1907, and authorizing an increase of its bonding powers, and for other purposes.

Dated at Ottawa, this 23rd October, 1912.
ANDREW T. THOMPSON,
Solicitor for Applicants.

Attawa Northern and Western Railway.

NOTICE—The Ottawa Northern and Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the extension of its main line from Maniwaki to a point at or near James Bay and the extension to Lake Temiskamingue, authorizing an increase of its bonding power, and for other purposes.

Dated at Montreal, this 23rd October, 1912.
H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Shuswap and Okanagan Railway.

NOTICE—The Shuswap and Okanagan Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to enter into an agreement with the Canadian Pacific Railway Company for any of the purposes specified in section 361 of "The Railway Act," and to lease its railway to the said company, and authorizing an increase of its bonding power, and for other purposes.

Dated at Montreal, this 23rd October, 1912.
A. R. CREELMAN,
Solicitor for applicant.

Pringle, Thompson & Burgess,
Ottawa agents.

NOTICE!

The Canadian Pacific Railway Company will apply to the Parliament of Canada at its next Session for an Act authorizing it to lay out, construct and operate a railway from a point on the company's Kleinburg-Sudbury Branch, between Bolton Junction and Palgrave, thence in a westerly direction through the Counties of Peel and Halton to a point on the Ontario and Quebec at or near Campbellville.

Dated at Montreal this First day of November, 1912.

W. R. BAKER,
Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

British Columbia Southern Railway.

NOTICE—The British Columbia Southern Railway Company will apply to the Parliament of Canada, at its next session for an Act extending the time within which it may construct its railways to the 49th parallel and the Tobacco Plains, and from the main line at a point about 36 miles west of the Eastern Boundary of British Columbia, authorized by chapter 55 of the Statutes of 1899; the western section of its railway and the branches to Nelson and Martin Creek as described in section 1 of chapter 52 of the Statutes of 1900, and the branch from Michel to Kananaskis as described in section 1 of chapter 54 of the Statutes of 1909, and authorizing an increase of its bonding powers and for other purposes.

Dated at Montreal, this 23rd day of October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Manitoba and Northwestern Railway.

NOTICE—The Manitoba and Northwestern Railway Company will apply to the Parliament of Canada at its next session for an Act extending the time within which it may construct the lines of railway from Yorkton to Prince Albert, from Russell to the Northern or Western boundary of Manitoba, from a point between Portage la Prairie and Arden to the boundary of Manitoba, from some point between Westbourne and Beautiful Plains northwesterly in the direction of Lake Dauphin or Duck Mountains, from a point between Theodore and Insinger to a point in Township 32, Range 18 or 19, west of the 2nd Meridian, and from Bradenbury to Kamsack, and authorizing an increase of its bonding powers, and for other purposes.

Dated at Montreal this 23rd October, 1912.

H. C. OSWALD,
Secretary.

The Guelph and Goderich Railway Company.

THE Guelph and Goderich Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the branches which it has been authorized to construct by section 7 of chapter 81 of the Statutes of Canada, 1904, and authorizing an increase of its bonding powers, and for other purposes.

Dated at Montreal, this 23rd October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Campbellford, Lake Ontario and Western Railway.

NOTICE—The Campbellford, Lake Ontario and Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing an increase of its bonding powers, and for other purposes.

Dated at Montreal, this 23rd October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Alberta Central Railway.

NOTICE—The Alberta Central Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway from a point in township 38, range 23, west 4th Meridian westerly to a point in or near Red Deer authorized by chapter 44 of the Statutes of 1901; the extension from a point in township 38, range 23, west 4th Meridian easterly to a point in township 39, range 11, west of the 4th Meridian authorized by chapter 75 of the Statutes of 1903; branches from westerly terminus near Rocky Mountain House to a point in or near the Yellowhead Pass, from easterly terminus near the elbow of the Battle River to a point at or near Saskatoon or Warman and from a point on main line east of Red Deer to a point at, in or near Moose Jaw authorized by chapter 39 of the Statutes of 1909; and the extension from Saskatoon to a point at or near Fort Churchill with a branch from some point on such extension at or near the Pas to a point at or near Port Nelson; extension from Moose Jaw to a point on International Boundary in township 1, range 16, west 2nd Meridian; railway from a point between Red River and Cygnet Lake to a point at or near Blackfalds thence to Lacombe; three branch lines, 30 miles each, from authorized line into Big Horn Range between North Saskatchewan and Brazeau Rivers; two branches, 25 miles each, through ranges 20, 21 and 22, townships 43, 44, 45 and 46, west of the 5th Meridian, and northeasterly from north end of Big Horn Range along Brazeau River thence to Pembina River authorized by chapter 30 of the Statutes of 1911, and authorizing an increase of its bonding powers, and for other purposes.

Dated at Montreal, this 23rd October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Alberta Railway and Irrigation Company.

NOTICE—The Alberta Railway and Irrigation Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railways which it has been authorized to construct by chapter 79 of the Statutes of 1900, and by chapter 187 of the Statutes of 1903, namely from a point between Lethbridge and Stirling to a point on the International Boundary between ranges 24 and 30, west 4th Meridian; from Cardston to a point in range 1, west 5th Meridian; from a point at or near Cardston to a point at or near Picher Creek, thence to a point between range 2, west 5th Meridian and range 27, west 4th Meridian; and from Stirling to a point in range 4, west 4th Meridian between the line of the Canadian Pacific Railway and the International Boundary, and authorizing an increase in its bonding powers, and for other purposes.

Dated at Montreal this 23rd day of October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

Canadian Pacific Railway.

NOTICE—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act, 1. Authorizing the company to lay out, construct and operate the following lines of railway:—

(a) From a point at or near Snowflake on the Windygates subdivision and running in a westerly direction to a point in or near Section 14, Township 1, Range 11, west of the Principal Meridian, all in Manitoba, a distance of about 9 miles;

(b) From the present terminus of the Gimli branch at or near Gimli, in a northerly direction for about 60 miles through Range 3 or 4, to some point on or near the west shore of Lake Winnipeg, thence in a northwesterly direction to a point on the Little Saskatchewan River, all in the Province of Manitoba;

(c) From some point on the line of railway described in Sub-section "C" of Section 4 of "The Canadian Pacific Railway Act, 1911," situate not more than 50 miles east of Stirling to a point on the Alberta Railway and Irrigation Company's Railway at or near Stirling, all in the Province of Alberta;

(d) From a point at or near Cayley on the Macleod branch in a southerly and southwesterly direction to a point at or near Burmis on the Crow's Nest subdivision;

(e) From a point on the company's Kleinburg-Sudbury branch between Bolton Junction and Palgrave, thence in a westerly direction through the counties of Peel and Halton to a point on the Ontario and Quebec Railway at or near Campbellville;

(f) From a point on the company's railway south of Forsythe street in Hochelaga ward, Montreal, thence in a northerly direction through the counties of Hochelaga and L'Assomption to a connection with the company's railway at or near L'Epiphanie;

2. Extending the time within which the company may construct the following lines of railway:—

(a) From a point on the company's Crow's Nest branch in Section 12, Township 9, Range 26, west of the Fourth Meridian, thence westerly along the north side of the Old Man River to a point in Section 36, Township 7, Range 4, west of the Fifth Meridian, all in the Province of Alberta;

(b) From a point at or near Tantallon, on its Pheasant Hills branch, to a point at or near Craven on its branch northerly from Regina, all in the Province of Saskatchewan;

(c) From a point at or near Dysart or Lipton in a southerly and southeasterly direction to a junction with the line described in paragraph 2 (b);

(d) From a point in Townships 32 to 34, Ranges 21 to 23, west of the Second Meridian in a northerly direction into the Town of Prince Albert, a distance of about 130 miles;

(e) From Stonewall or Teulon or a point between those two places or north of Teulon, thence in a direction generally north-west to a point on the east shore of Lake Manitoba between Marsh Point and the north boundary of Township 25.

And for other purposes.

Dated at Montreal, this First day of November, 1912.

W. R. BAKER,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

"The Bowser"

Has the Right-of-way

For twenty-eight years the Bowser has had the right-of-way in building oil storage systems. During that time they have devoted their entire attention to this problem, and as a result they are in position to assist you in this troublesome department.

You systematically and accurately check out the coal you use, and night and day your track is watched by a thousand trained eyes. Yet, seven cases out of ten you pay little or no attention to what keeps your rolling stock in good condition—your oil.

We solicit your correspondence. Get our new book No. 18. It's free.

S. F. BOWSER & COMPANY, Inc.

66-68 Fraser Avenue, Toronto, Canada

Manufacturers of the standard self-measuring, hand and power driven pumps, gasoline and oil storage systems, oil filtration and circulating systems, dry cleaning systems, etc. Established 1885.

Made by Canadian Workmen and sold by Canadian Salesmen.

Thor

Close Corner Piston Air Drills

Are the Original No.'s 8 and 9 Close Quarter Machines

Equipped with Roller Bearings which reduce friction to a minimum. Guaranteed 30 per cent. more efficient than any other make. Sent on trial at our expense.

Made especially for use in close quarters where the ordinary air drill cannot be operated.

BUILT IN TWO SIZES:

No. 8 for drilling up to 1 1/4 in. in diam., Reaming and Tapping up to 1 in.

No. 9 for drilling up to 3 in. in diam., Reaming and Tapping up to 2 in.

Synopsis of Dominion Land Regulations

Any person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-agency for the district. Entry by proxy may be made at any agency, on certain conditions by father, mother, son, daughter, brother or sister of intending homesteader.

Duties.—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price, \$3.00 per acre.

Duties.—Must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may enter for a purchased homestead in certain districts. Price, \$3.00 per acre. **Duties.**—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.

W. W. CORY,

Deputy of the Minister of the Interior.

EDISON BSCO

PRIMARY BATTERY

The Standard Closed Circuit Cell

Increasing the capacity of a railroad, universally recognized as one of the important functions of a signal system, hinges primarily on carefully worked out spacing plans.

And when this problem has been solved in a manner that should insure the best results, much of the benefit may be lost through inefficient operation.

It is not difficult to understand, therefore, why the specifications for a signal installation are so carefully drawn, each detail receiving due consideration, in an effort to construct a system that will safely govern the movement of traffic and reduce to the minimum detentions arising from improper stop indications.

But no matter how carefully the system may be planned or the work executed, if a mistake is made in the selection of the source of energy the results are sure to be disappointing.

Edison Primary Battery, always prominent in the railway signal field, has kept step with the march of progress, and the cell of to-day is as much superior to that of a decade ago as the modern electric semaphore is to the early type.

No other method of furnishing current for the operation of an automatic signal system insures economy equalling that gained from the use of EDISON-BSCO Primary Battery. No other method excels the Edison in reliability, each signal having its independent power plant, a bank of cells of guaranteed capacity each representing the perfection of the battery-maker's art. The modern Edison Cell has proven itself such an efficient agent as to cause some roads to throw out the later schemes for supplying current and adopt the dependable and economical EDISON-BSCO Cell.

The all important question of energy supply should never be passed over lightly, particularly when authentic evidence of the performance of Edison Cells can be easily obtained from practically all the signaled roads in the country. Catalog on request.

Eliminate Losses From Fire Blockades

The O-B Emergency Fire Hose Bridge will make it possible for you to run your heaviest cars over several lines of fire hose and save the fares lost by blockades during fires along your line. It can be carried on your repair wagon and set in position on track very quickly.

Fares lost by a single blockade during rush hours would equip your entire system. Better be prepared.

Full description on page 401 of Cat. No. 12

THE OHIO BRASS CO., Mansfield, Ohio, U.S.A.

Reduce Cost of Locomotive Repairs

Use Besly Grinder—Fastest Flat Surface Reducer in Existence

Inexpensive in first cost and upkeep.

Faster and better than milling, planing or filing.

Can be operated by unskilled labor.

No cutters to sharpen and replace.

From a General Foreman:

"I wish to mention in particular the facing of Rod Brasses. The Besly Grinder beats the slab miller three to one. We used a full paid machinist on the miller, while the Besly Grinder is run by an apprentice boy."

From the Superintendent of a large locomotive repair shop:

"In the Rod and Link Department we use the Besly Grinder for grinding the sides of links, link blocks and link block plates, link hanger jaws inside and out, motion pins, eccentric blade jaws inside and out, union link jaws, connections, levers, rod keys, radius bars, main rod brasses and in fact all of the rod and motion work."

INVESTIGATE

Ask for our treatise—"Besly's Modern Disc Grinding Practice," 112 pages, 103 pictures and study the article commencing on page 105, "Besly Grinder in the Railroad Shop." Mailed Free. Write now.

1912 Record Breaking Crops Mean a Busy Season for Railroads

Crops this year will be the third largest in the history of the country—30% greater than last year. Their handling will tax the abilities of the railroads to the utmost, and demand the utilization of all available power.

DEARBORN SERVICE

will greatly increase the hauling capacity and general efficiency of each locomotive by relieving foaming conditions, stopping leaks, lengthening period between boiler washings, and increasing steaming capacity by preventing scale formation. Regular use of Dearborn Treatment will insure great savings and most satisfactory operating conditions.

Ramapo Automatic Safety Switch Stands

No. 20

This style is especially adapted for use in yards. The throw is parallel. There are no gears. The handle is lifted at an angle at which it can be most quickly grasped, and the stand can be operated with the greatest ease and speed.

This stand measures 10 5/8 ins. from top of tie to top of base flange and is furnished preferably with our standardenameled target at such height and of such shape as may be desired. The target is cut out and reinforced at the top to admit lamp tip, so that the only projection above the target is the fit for the lamp socket.

Offices throughout the Civilized World.

Executive Offices:

NOS. 346 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Correspondence Invited.

NAVAL SERVICE OF CANADA

Notice concerning Tenders for
Metal Stores.

SEALED TENDERS addressed to the undersigned, endorsed "Tenders for", will be received up to noon December 3rd for the undermentioned descriptions of Metal Naval Stores.

Brass and Copper Sheets, bars and tubes. Zinc and Lead Sheets, Steel Plates, Sheets, Angles and Bars. Steel Wire rope. Solder Spelter and Tin. Barbed Metal, Copper and Steel nails, Steel Files.

All for delivery at H.M.C. Dockyards at Halifax, N.S., and Esquimalt, B.C.

Forms of tender may be had by application to the undersigned, or to the Naval Store Officer at either Dockyard. Applicants for tender forms are requested to state clearly for which article or articles they wish to tender.

Unauthorized publication of this notice will not be paid for.

G. J. DESBARATS.

Deputy Minister of the Naval Service.

Department of the Naval Service,
—30564. Ottawa, November 1st, 1912.

NOTICE

The General Railway Signal Company, the owner of the exclusive rights in Canadian patents No. 923, No. 3127, No. 9626, and No. 97758, issued to him and his assigns, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents, to the fact that he is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to the office of the company, Room 506, Eastern Townships Bank, 263 St. James St., Montreal, Que.

Canadian Northern Branch Lines Company.

NOTICE is hereby given that the Canadian Northern Branch Lines Company will apply to the Parliament of Canada at its next session for an Act extending the time wherein the Company may construct all the lines of railway authorized by the Statutes of Canada for 1911, chapter 56, section 8, excepting the first line.

GERARD RUEL.

Toronto, 30th October, 1912.

MAIL CONTRACT

SEALED TENDERS addressed to the Postmaster General, will be received at Ottawa until Noon, on Friday, the 13th December, 1912, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six round trips per week, over Aurora Rural Mail Route from the Postmaster General's pleasure.

Printed notices, containing further information as to conditions of proposed Contract, may be seen and blank forms of Tender may be obtained at the Post Office of Aurora, Vaudoré, Newmarket, White Rose, Gormley, Pleasantville, Bethesda, and at the Office of the Post Office Inspector at Toronto.

G. C. ANDERSON,
Superintendent.

PROFESSIONAL CARDS

CANADIAN RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and shipbuilders, contractors and promoters of railway enterprise. CANADIAN RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

Received from Uncle Sam**WAR DEPARTMENT**

OFFICE OF THE QUARTERMASTER-GENERAL, WASHINGTON

Goldschmidt Thermit Co.,
90 West Street,
New York, N.Y.

(381551)

Gentlemen: I Replying to your letter of August 26th, 1912, you are informed that the welded stern post of the steamer "Gen. Nathaniel Greene," which you repaired for this Department at New London, Conn., in 1907, is still in service on that vessel and giving satisfactory results.

2. It is general policy of this Department to not permit the publishing of any official reports upon commercial products or processes, but in this particular case there would appear to be no objection to your use of the foregoing statement of fact regarding the continued use during the past five years of the stern frame welded by you. By direction.

Respectfully,

(Signed) **WILLIAM E. HORTON,**
Major, Quartermaster Corps, U.S. Army.

We feel confident that the above letter, the original of which we can show, is enough evidence to prove the permanency of a "Thermit Weld."

Our welding process has received the sanction of the British Corporation for the Survey and Registry of Shipping, Glasgow.

Our pamphlet No. 25N and "Reactions" will interest you. Shall we send them?

NEW 8-FEED DETROIT LUBRICATORS

CANADIAN DETROIT LUBRICATOR COMPANY, LTD.
WINDSOR, ONT.

The new 8-feed Detroit Locomotive Lubricator is used on superheater Mallet compound locomotives. The six outside feeds lead to the high pressure steam chests, the high pressure cylinders and the low pressure steam chests.

The two middle feeds can be used for two air pumps, or for one pump and an intercepting valve or for one pump and a mechanical stoker.

A half turn of the oil control valve permits of all the feeds being started or stopped instantly without disturbing the adjustment of the feed regulating valves. A quarter turn cuts off all but the two middle feeds.

The new Detroit Locomotive Lubricators give greater oil mileage, easier control and better lubrication than any other lubricators on the market. Our circular tells why. Sales Agents, Taylor & Arnold, Limited, Montreal.

St. Henry, MONTREAL

TORONTO OFFICE
Traders Bank Building

On construction work you should use a machine that will be busy all the time, because an idle machine means a loss in money.

THE BROWNHOIST LOCOMOTIVE CRANE

Can be kept busy all the time from the beginning to the end on any construction work—because it can be used for excavating with grab or drag-line bucket ; handling sand, gravel, stone, etc., with grab bucket or skips ; drive piling and sheeting with either steam pile-driver or drop-hammer ; place the concrete in elevated forms or in trenches ; pull piling and sheeting ; place the backfill ; switch the cars ; and all the miscellaneous hoisting work.

These Cranes are self-propelled ; made in various capacities ; eight and four-wheel ; and with either steam, electric, or gas engine drive.

Our Catalogs I and K show how and where the Crane is used. Write for these Catalogs.
